3. Colors that are opposite on the color wheel.
4. Colors that lie next to each other on the color wheel.
5. All bright colors
6. Different colors that go well together.
7. Different values and intensities of the same color.
8. Contrasting colors that go together.
9. Any three colors on the color wheel.

Description of illustrative material needed.

Suggested colors for the color harmonies to be displayed on the Bulletin Board

1. Triad - red, yellow, and blue
2. Analogous - yellow, yellow - green, green
3. Complementary - pink, green.
4. Monochromatic - blues

To help pupils gain appreciation of pleasing color proportion, the illustrations of these colors should be shown in varying amounts.

Color combinations are more beautiful when the amounts of color are varied rather than equal. Too much repetition in proportion results in monotony.

Generalization Y: Because woolens are made of short fibers (lying at all angles) they are thick, soft, and spongy with a slight nap which increases the warmth and softness of the fabric, but causes them to soil easily.

Z: Because worsteds are made of long fibers, laid parallel as they are spun, they are firm, resilient with little nap or fuzz. Worsteds hold their shape and retain creases well, but develop a shine with wear.

XX. Betty and Eileen are trying to decide whether to purchase a worsted or a woolen fabric for the fitted skirts they are planning to make. What characteristics of each should they consider in making a choice?

Check with an x the characteristics of woolens. Check with an O the characteristics of worsteds.

__O__ 1. Has little or no nap or fuzz
__x__ 2. Fabric is soft and thick
__O__ 3. Closely woven
__x__ 4. Warmer
__O__ 5. Fabric is smooth
__x__ 6. Becomes baggy unless lined.
__O__ 7. Retains creases
__O__ 8. Wrinkle resistant
__x__ 9. Made of short fibers

Generalization AA: Durability of color in any fabric cannot be judged and must be guaranteed by label.

AB: Fabrics with a crease resistant finish will resist wrinkles during wear.

AC: The amount of shrinkage in any fabric cannot be judged and must be guaranteed by label.

AD: If a garment must be hand washed, the label needs to give this information.

XXI. Ruth is buying a blouse and has decided on one made of cotton. Shown below is the label that is attached to the blouse. According to this label, what can Ruth expect of the blouse?

Check (x) the statements which describe what Ruth can expect.

____1. Will not shrink
_x_2. Color will not bleed when washed.
_x_3. No ironing necessary after washing.
____4. Will shrink less than 2 per cent.
_x_5. Light will not cause color to fade.
_x_6. Is machine washable
_x_7. Perspiration will not cause fading.
_x_8. Will resist wrinkles during wear.

Generalization AE: Fabrics with woven designs usually show wrinkles less than fabrics woven without designs.

AF: Heavy fabrics wrinkle less than light-weight fabrics.

XXII. Hildy and her family are planning a trip for this summer. She wants to make a dress from a fabric that will show wrinkles less. The cotton fabrics that Hildy likes are shown on the Bulletin Board*. Which of these two would be a better choice for the trip?

Check (x) the fabric that will show wrinkles less.

_x_ A.
___ B.

Check (x) the reason(s) that explains your choice.

_x_ 1. Heavy fabrics show wrinkles less than light-weight fabrics
_x_ 2. Fabrics with woven designs show wrinkles less than fabrics without
___ 3. Light-weight fabrics show wrinkles less than heavy fabrics.
___ 4. Fabrics without woven designs show wrinkles less than fabrics with designs.
_x_ 5. Wrinkling would be less noticeable because the fabric already has lines on it.

Description of illustrative material needed.

Display on Bulletin Board a pique fabric sample designated as A and a plain percale fabric sample designated as B. These samples should be of similar color.

Generalization AG: It is important to recognize the weave of the fabric.

(1) Twill weave produces a diagonal effect.
(2) Satin weave produces a smooth, lustrous fabric.
(3) Pile weave produces a soft, deep surface effect. It has an up and down.
(4) In plain weave every yarn interlaces with every other yarn. Unless it is printed or has a surface finish, it has no right or wrong side. There is also good balance between warp and filling.

XXIII. Listed below are 4 types of weaves and the phrases that describe these weaves.

In the blank at the left of each weave place the number(s) of the phrase(s) which best describe it.

Descriptions		Samples
2,5,7	A. Plain	3
1	B. Twill	2
3	C. Satin	1
4,6	D. Pile	4

Descriptions

1. Produces a diagonal effect
2. Has no right or wrong side
3. Produces a smooth, lustrous fabric
4. Produces a soft, deep surface effect
5. Each yarn interlaces with every other yarn
6. Has an up and down
7. Good balance between warp and filling yarns.

Shown on the Bulletin Board* are 4 fabric samples. Each sample illustrates one of the 4 weaves listed above.

In the blanks at the right, place the number of the fabric sample that illustrates each weave.

Description of illustrative material needed.
The fabric swatches illustrating these four weaves should be displayed on the Bulletin Board

Satin weave, designated as 1
Twill weave, designated as 2
Plain weave, designated as 3
Pile weave, designated as 4

Generalization AH: Loosely woven fabrics tend to shrink.

XXIV. Cynthia is buying a cotton housedress for her mother. Since it will have to be washed often, she wants a dress that will not shrink. Cynthia has found only two in the correct size made of the cotton fabrics shown on the Bulletin Board. As she reads the labels on the dresses in the store, she discovers that neither label tells her anything about shrinkage.

Shown on the Bulletin Board* are fabric samples of the two cotton housedresses. Which fabric probably has less tendency to shrink?

Check (x) the fabric which probably has less tendency to shrink.

_x_ A.
____ B.

Check (x) the reason(s) that explain your choice.

_X_ 1. Fabric is more closely woven.
____ 2. B is a heavier fabric than A because it has more yarns.
____ 3. A is woven of finer yarns than B
____ 4. B has been heavily starched in finishing

Description of illustrative material needed.

The fabric samples to be displayed on the Bulletin Board for this test item should be a firmly woven cotton designated as A and a loosely woven cotton designated as B. These samples should be as similar in design as possible.

Generalization AA: Durability of color in any fabric cannot be judged and must be guaranteed by label.

AC: The amount of shrinkage in any fabric cannot be judged and must be guaranteed by label.

XXV. Ruth is helping her father select a blouse for her mother's birthday. They want a blue rayon blouse that will neither shrink nor fade. At the store they have found two blouses that they like. One has a label and one does not. However, the clerk has told them that neither blouse will shrink or fade. From the clerk's statement, can they be sure that neither of these things will happen to either blouse?

Check (x) whether they can be sure that the blouse will neither shrink nor fade.

____ A. Yes
_x_ B. No

Check (x) the reason(s) that explains your choice.

____1. Most clerks know their merchandise well enough to tell whether it will shrink or fade.
_x_ 2. The amount of shrinkage can only be determined by the label.
_x_ 3. Color fastness in any fabric can only be determined by the label.
____4. Now almost all colors are colorfast.
____5. They can tell only by trying it themselves.
____6. Blue will usually fade.

Generalization AI: Twill weave is often used on work clothes because it can have more yarns per square inch and so will be stronger than plain weave.

AJ: Soil shows most on smooth, plain surfaces.

XXVI. Kay wants to make summer shorts for her three-year-old brother. She is anxious to get a durable fabric because his playclothes have not been wearing well. Also, she wants a fabric that will not show soil quickly.

Which of the two fabrics shown on the Bulletin Board* will be better for Kay to buy?

Check (x) the choice which is better.

___A.
_x_B.

Check (x) the reason(s) that explains your choice.

_x_1. Twill woven fabrics are stronger than plain woven fabrics because they can have more yarns per square inch.
_x_2. Soil will show less on B because it is figured (has stripes)
___3. A is more durable than B because it is a heavier, sturdier material.
___4. A solid color won't show soil as much as a figured fabric.
___5. Plain woven fabrics can have more yarns per square inch, and so will be stronger than twill woven fabrics.

Description of illustrative materials needed.
The fabric samples to be displayed on the Bulletin Board for this test item should be:

A. Indianhead fabric, no design, dark color
B. Cotton twill fabric, striped design.

Pub Date - Aug66 32p.

*HOME ECONOMICS EDUCATION; *STUDENT EVALUATION; *CLOTHING INSTRUCTION; GRADE 9; TEXTILES INSTRUCTION; TESTING; *TEST CONSTRUCTION; *ACHIEVEMENT TESTS

Models for performance and problem solving test items and evaluation devices are provided for adaptation by home economics teachers to the needs of specific ninth grade clothing classes in the comprehensive high school. Evaluation materials were developed through research projects and trial use in Iowa schools by heterogeneous school groups. The materials are based on subject matter areas: fiber characteristics and their care, use of the sewing machine, garment construction and alterations, the relation of nutrition and cleanliness to health and grooming, and pattern, fabric, and clothing selection. Included are (1) objectives to which the evaluation materials relate, (2) suggestions for introducing and interpreting the results of tests, and (3) the problems presented as capsulated experiences, illustrating generalizations which require the student to give not only the answer but also justification of the answer. Other evaluation materials from home economics areas, all using similar formats are available as VT 005 747-VT 005 757 (ARM Summer 1969). (FP)

Describe

Source (agency)
(address)

Objectives

1. Ability to select patterns and to make simple alterations.
2. Ability to select fabrics which are attractive and fitted to their skill.
3. Ability to thread a sewing machine.
4. Ability to construct simple garments using good management practices.
5. Ability to select clothing which is becoming in color and design.
6. Understanding of characteristics of different fibers and their care.
7. Understanding of relation of nutrition and cleanliness to health and grooming.

Development of the Evaluation Materials

The performance tests, check sheets, and paper-and-pencil test items are based on the above objectives and generalizations from curriculum guides developed for use in Iowa high schools. An attempt was made to illustrate a variety of ways of evaluating learning. The key for the test items has been approved by subject matter specialists.

Use of Evaluation Materials

1. These were designed for use in determining where pupils are at any stage of learning: pre-test, during unit, at end of unit, or as part of a semester test.

2. In selecting the paper-and-pencil test items to use at a particular time, choose those which involve the generalizations which you are concerned with in your teaching. When using these items do not give the generalization listed at the top of each sheet to the pupils.

3. The directions for responding to the paper-and-pencil test items accompany each one. In order to force pupils to consider each solution and reason, the number of correct responses is not indicated. If an answer sheet (see example) is used, the directions will need to be changed accordingly.

4. To obtain a score for each girl, total only the number of correct responses (See key on copy of each item) because research indicates that deducting for guessing has little effect on the relative size of the scores unless a pupil checks an unreasonably large number of responses. If it appears that the pupils are checking a large number of responses in the hope of "hitting" the right one, you may want to (1) deduct one point for each incorrect response or (2) set a limit on the number of checks they may use. (If this is done, set the limit slightly above the number of correct responses, however.)

5. In interpreting the responses of your pupils, (1) Look at the size of the scores in relation to the possible total score to obtain a general idea of the class as a whole and to determine which pupils need special help. (2) Tabulate the number of pupils who selected each response and see which generalizations they failed to apply and which misconceptions they hold. These suggest points at which addtional learning experiences are needed.

6. Copies of the rating sheets can be filled in by teacher and pupils and a comparison made of their ratings from time to time in order to help pupils learn to rate themselves objectively.

Performance Test

Objective: Ability to alter a pattern by extending it.

Generalization: In enlarging a pattern piece to avoid changing its outline, slash and spread the piece rather than add to its outer edges.

Directions for administering this test. See that each girl has the following supplies:

1. A pattern piece which illustrates the type of garment they have been making* For example, if the class has completed a straight skirt, use a front or back pattern piece of a skirt. These pattern pieces could be old patterns or could be cut from wrapping paper.

2. Piece of paper large enough to extend the pattern.

3. Scissors

4. Pins

5. Ruler

6. A copy of a problem to solve, such as this:

   You have purchased a skirt pattern which fits your hip measurement, but you find that it is 3 inches too short for you. Using the pattern piece given you, make the alteration which is needed so the skirt will be 3 inches longer.

If your class is large and space for laying out pattern pieces for alteration is limited, you could divide the class into two groups and administer the test to each group separately.

---

*This test could also be used as a pretest, especially if the class had previously had help on alteration of patterns and you wanted to see how well they could recall and apply the generalizations relating to alteration of patterns.

Possible Difficulties

1. Unable to place bobbin in winding mechanism
2. Thread not put through tension regulator
3. Thread not put through tension regulator correctly
4. Thread not put through take up
5. Threaded through take up before tension regulator
6. Thread not put through thread guide
7. Needle threaded in wrong direction
8. Bobbin unevenly wound
9. Bobbin placed in backward
10. Thread not placed in slot on bobbin case
11. Bobbin thread not brought to surface

Difficulties in Winding a Bobbin and Threading a Machine

Name	1	2	3	4	5	6	7	8	9	10	11

Performance Test

Objective: Ability to wind a bobbin and thread a machine

If the girls in your class have had little previous instruction in sewing at school, home, or in 4-H club, you might want to determine what help each will need on learning how to wind the bobbin and thread the sewing machine.

Directions: To administer this test, place a spool of thread and an empty bobbin at each machine. Place the machines far enough apart and in such a position that each girl can work without being affected by the actions of the others taking the test. Divide the girls in your class into groups based on the number of sewing machines you have in the laboratory and have each of them wind the bobbin and thread the machine as best they can.

When each has finished, check (x) her difficulties on the chart on the back side of sheet, so that you will have a record of those needing help and can divide them into groups in terms of what you need to emphasize in teaching them how to wind the bobbin and thread the machine.

(over)

How Am I Doing in Selection, Alteration, and Use of a Pattern?

	yes	no
1. In my selection of a pattern for my blouse*, I chose one that was		
a. well suited to my sewing skill		
b. well suited to the fabric		
c. best suited to my body measurements in size and type		
2. In making alterations on my blouse pattern (leave blank if no alterations needed) I was able to		
adjust it to my body measurements		
3. In my use of the pattern		
a. I laid it on fabric as the guide sheet indicated		
b. I laid it on fabric smoothly		
c. I laid it on grainline of fabric		
d. I pinned it securely to the fabric		
e. I cut the fabric with long, even strokes		
f. I cut from wide to narrow parts of pattern pieces		
g. I transferred all markings		

*If the term garment were used instead of blouse, this check sheet could be used at any grade level for any type of garment.

Am I a Good Manager When I Sew?

	always		usually		seldom	
	1	2	1	2	1	2
1. I begin work when laboratory period starts.						
2. I have materials and equipment at school when I need them						
3. I save my time and energy by						
a. keeping work surfaces uncluttered						
b. taking needed equipment (pins, etc.) to machine and ironing board						
c. following guide sheet or group plan						
d. hanging or folding garment pieces to avoid unnecessary pressing						
4. I share equipment with others by						
a. pinning garment pieces at table rather than at ironing board or machine						
b. planning the use of sewing machine with my partner or group.						
5. I share teacher's time with others by						
a. watching demonstrations carefully						
b. using illustrative material for help						
c. keeping up with my group						
d. helping others who are behind the group						

(Suggestions to teachers: two columns are provided to allow for checking at two different times to determine improvement)

How Am I Doing in Learning to Sew and Press?

	always	usually	seldom
1. In staylining bias and curved edges are stitched with grainline			
2. In machine stitching a. bobbin and top threads are pulled back of presser foot before stitching			
b. fabric is guided, not pulled, from presser foot			
c. stitching is straight			
d. stitching is with grainline of the fabric			
e. seams and darts are secured at both ends			
f. I sit like this			
3. In pressing a. each seam is pressed before seams which cross it are stitched			
b. press marks are avoided			
c. grainlines still appear unchanged			
4. In hand sewing a. I use my thimble to push needle through fabric			
b. My needle is held one of these ways when I am holding my work in my hands			
c. I hold my sewing high enough so that my back is straight			
d. I sit so the light falls on my sewing			

Index to Generalizations and Items

A. Measurements for pattern selection are most accurate if the person is standing naturally and at ease and the tape measure is adjusted snugly, but not tightly. Test Item I.

B. Horizontal measurements are most accurate if the tape is kept parallel to the floor. Test Item I.

C. If the hip measurement is taken 7 inches below the waistline, it will correspond to the location of the hip line on the pattern. Test Item I.

D. It is more difficult to make alterations at the bust line than at waist, hip, shoulder, and hemline of a pattern; therefore time is saved when a dress pattern is selected which most closely fits the bust measure. Test Item II.

E. Patterns vary in type and the types vary in proportions of the figure:
   (1) Girls' patterns are designed for growing girls whose figures are still immature.
   (2) Teens' patterns are for the less mature figure than the Misses.
   (3) Juniors' patterns are for the fully developed figure that is shorter than the Misses.
   (4) Misses' patterns are for the fully developed figure.
   (5) Half size patterns are shorter, narrower in shoulder and larger in the waist and hip than the Misses. Test Item III.

F. Pattern companies vary in the amount of ease allowed in patterns. Test Item IV.

G. In altering a pattern piece slashing and spreading the piece results in fewer changes in the outline (outer edges) than does adding to the outer edges of a pattern piece. Test Item V.

H. A fabric is a wise choice for a beginner if it is easy to handle and needle holes from removed stitches do not show.
   (1) Fabrics which are stiff or heavy are difficult to handle in sewing.
   (2) Needle holes from stitching may show more on a dark than on a light background. Test Item VI.

I. A fabric is more likely to keep its shape if it is cut and handled carefully, staylined (staystitched), and pressed with the grain. Test Item VII.

J. If staylining (staystitching) proceeds from the wide to the narrower part of the garment piece (or so the fabric threads lie flat rather than ruffled up) the garment piece will remain on grain. Test Items VII and IX.

K. If the grainline of the pattern is laid on the grain of the fabric, the garment can hang as the designer planned. Test Item VII.

L. Time is saved and results are more likely to be successful if small pieces of a garment are completed before they are joined to larger units. Test Item VIII.

M. To lessen the chance of stretching, necklines are finished before armseyes. Test Item VIII.

N. The necklines can be more easily finished while the garment is flat. Test Item VIII.

O. Staylining (staystitching) with the grain prevents stretching of bias and curved edges during fitting and stitching and holds the grain in correct position. Test Item IX.

P. A feature can be emphasized by wearing colors which repeat or contrast the color of the feature. Test Item X.

Q. Colors which repeat but are brighter than a person's coloring will tend to dull her coloring. Test Item X.

R. Intense or bright colors advance; dull or greyed colors recede; darker values advance; lighter values recede. Test Item XI.

S. Advancing colors and large designs call attention to size. Test Items XI & XIII.

T. Contrasts of color can be used to emphasize a center of interest. Since the costume is less important than the person, the face is usually made the center of interest. Test Item XII.

U. A costume appears better unified when one of the colors is used in more than one area of the costume. Test Item XII.

V. Clothing can be used to emphasize attractive features and de-emphasize unattractive features. Emphasis of a feature is created by repetition. Test Item XIII.

W. If a color is so intense that it dulls one's personal coloring by comparison, the garment rather than the person will be emphasized. Test Item XIV.

X. Very intense colors cause a neutral, fair, or delicate skin to appear pale by contrast. Test Item XIV.

Y. Plant fibers resist moths, tend to wrinkle easily, and, with the exception of rayon, are usually machine washable. Test Item XV.

Z. Animal fibers and vicara tend to be resilient, elastic, and absorbent. Test Item XV.

AA. Man-made, synthetic fibers tend to be wrinkle resistant, to melt at high ironing temperatures, dry quickly, and resist moths. Test Item XV.

AB. Nails that chip and peel in layers may indicate that there is lack of sufficient calcium and protein in the diet. Test Item XVI.

AC. Keeping the teeth clean is essential, but it will not replace the need for vitamins, minerals, and protein to protect them from decay. Test Item XVI.

AD. When the supply of protein, minerals, and vitamins is poor, the hair becomes dull, dry, harsh, and difficult to manage. Test Item XVII.

AE. Although the acne of adolescence may be unrelated to nutrition, a good all-round diet, together with cleanliness, may be expected to help combat it. Test Item XVII.

AF. Cleaning the skin regularly is essential to keep the pores open and clean, as clogged pores develop blackheads. Test Item XVII.

Example of an answer sheet which could be used to record responses and, hence, avoid having to reproduce the test items each time they are used. Can be adapted for any combination of items.

_____

_____

Generalization* A: Measurements for pattern selection are most accurate if the person is standing naturally and at ease and the tape measure is adjusted snugly, but not tightly.

Generalization B: Horizontal measurements are most accurate if the tape is kept parallel to the floor.

Generalization C: If the hip measurement is taken 7 inches below the waistline, it will correspond to the location of the hip line on the pattern.

I. Marilyn is getting ready to buy a pattern for a dress she is to make in class, and Frances is going to take her measurements.

A. Check (x) in the blank beside the number of these statements which best describe the way Marilyn <u>should stand</u>.

____ 1. Very erect		x** 4. Her usual posture	
____ 2. Abdomen flat	or	____ 5. Arms straight at sides	
____ 3. Feet together		x 6. Relaxed, comfortable	

B. Check (x) in the blank beside the number of these statements which best describe how tightly Frances should <u>hold the tape measure</u>.

____ 1. So it feels comfortable.	x 4. Snug, but not tight.
____ 2. As tightly as the garment should fit.	____ 5. Loose enough to allow for growth.
____ 3. Loose enough to allow for shrinkage.	____ 6. Tight, then add an inch to it.

C. Check (x) in the blank beside the number of these statements which best describe how Frances should <u>take the hip measurement</u>.

____ 1. Wherever the fullest part of the hips comes.	x 4. Seven inches below the waist.
____ 2. Six inches below the waist.	____ 5. Lower in back than in front.
____ 3. In the middle of the hips.	____ 6. Parallel to the floor.

*Do not give the pupils the generalizations. They are listed at the top of each item to help you in deciding whether to select the item for your test.

**Indicates response approved by specialists in textiles and clothing in this and subsequent items.

Generalization D: It is more difficult to make alterations at the bust line than at waist, hips, shoulder, and hemline of a pattern; therefore time is saved when a dress pattern is selected which most closely fits the bust measure.

II. Marilyn has the measurements Frances made for her and is deciding what size dress pattern to buy. Which of these should she use?

Check (x) the best one to use.

_____A. hip measurement, if it is a fitted skirt.
_____B. waist measurement
__x__C. bust measurement

Why do you think the one you selected is best? Check (x) the reason(s) which explain your choice.

_____1. If it fits at the waist, it will usually fit the hips and bust because they are in proportion.
_____2. It is easier to alter a pattern at the waist line than at the bust or hip line.
_____3. It is more important for the dress to fit at bust than at the waist or hips.
_____4. The dress won't hang right, if the waist does not fit.
_____5. The fit at the hips is very important on a fitted skirt.
_____6. It is more difficult to alter a pattern at the hips than at the waist or bust lines.
__x__7. It is easier to alter a pattern at the hip and waist line than at the bust line.
_____8. The pattern companies use the waist as the basis for size.

Girl Teen Junior Miss Half-size

Generalization E: Pattern vary in type and the types vary in proportions of the figure.

(1) Girls' patterns are designed for growing girls whose figures are still immature.

(2) Teens' patterns are for the less mature figure than the Misses.

(3) Juniors' patterns are for the fully developed figure that is shorter than the Misses.

(4) Misses' patterns are for the fully developed figure.

(5) Half size patterns are shorter, narrower in shoulder and larger in the waist and hip than the Misses.

III. On the opposite page are sketches of the five figure types used by most pattern companies. What pattern type would be best for <u>each</u> of the four girls whose figure types are described below?

In the blank write the name of the pattern type which would be most likely to fit <u>each</u> girl.

<u>Jr. or Miss*</u> 1. Barbara's figure is fully developed and she is about 5 feet, 5 inches tall.

<u>Half-size</u> 2. Marilyn is fully developed, but a little shorter than Barbara and has narrower shoulders and larger waist and hip than Barbara.

<u>Teen</u> 3. Marcia is a little shorter than Barbara and her hips and bust are not fully developed.

<u>Girl</u> 4. Cynthia's bust has not developed and she is much shorter than Barbara.

*Indicates responses approved (flexible key for 1)

Generalization F: Pattern companies vary in the amount of ease allowed in patterns.

IV. Marilyn finds the same dress design in the Simplicity and McCall's pattern books. If she tries the same size in the same pattern type from the two companies, she may find they do not fit the same. Why not?

Check (x) the reason(s) why these patterns may not fit the same.

_____1. The two companies base their patterns on different sets of measurements.
_____2. The seam allowances may be different.
__x__3. The amount of ease allowed may be different.
_____4. The measurements of one company may not be as accurate as the other company's measurements.

Generalization G: In altering a pattern piece slashing and spreading the piece results in fewer changes in the outline (outer edges) than does adding to the outer edges of a pattern piece.

V. After Marilyn had purchased her pattern, she found that the skirt pattern was 3 inches short for her. Which one of these statements best describe what she should do to the pattern so the skirt will be long enough for her?

Check (x) the best way.

_____1. Use a tape measure and chalk and measure down 3 inches from the bottom of the pattern at several points, then connect these points with a line to get new bottom edge.
_____2. Put a $1\frac{1}{2}$ inch pleat in the material before laying the pattern on.
_____3. Cut the top part of the pattern, then move it down and cut the remainder of the skirt.
__x__4. Cut the pattern into two pieces and add a 3-inch piece of paper between.
_____5. Put a 3-inch piece of paper on the bottom of the pattern.
_____6. Make the pattern longer at the waistline.
_____7. Add $1\frac{1}{2}$ inches at the top and at the bottom when cutting out the skirt.
_____8. Put in a smaller hem.

Generalization H: A fabric is a wise choice for a beginner if it is easy to handle and needle holes from removed stitches do not show.

(1) Fabrics which are stiff or heavy are fifficult to handle in sewing.

(2) Needle holes from stitching may show more on a dark than on a light background.

VI. Corine wants to select a fabric for her dress which will be easy to sew. Here are samples* of four cotton fabrics she is considering. Which one do you think she would be wise to choose because it would be easiest to sew?

Dark colored fabric	Stiff fabric	Heavy fabric	Light colored fabric
		C	D

Check (x) the cotton fabric which is easiest.

____A ____C
____B x D

Check (x) the reason(s) which best explain your choice of fabric.

____1. A darker color will hide the mistakes better.
x 2. A fabric which is not stiff is easier to handle than a stiff fabric.
____3. This fabric will not ravel as much as the others.
x 4. A light color will be less apt to show needle holes if she has to remove any stitching.
x 5. A light-weight fabric is less difficult to handle than a heavy-weight fabric.
____6. A heavier fabric will not stretch as much as the lighter weight fabrics.

*Description of illustrative material needed:

Fabric A - use a fabric that is light weight, plain, and dark in color, such as dark blue percale.
Fabric B - use a stiff fabric such as one that has a metallic, all-over design, or a stiff, polished cotton.
Fabric C - use a heavy, plain fabric, such as denim.
Fabric D - use a fabric like A, but light in color.

Avoid use of fabrics with a design that must be matched.

Generalization I: A fabric is more likely to keep its shape if it is cut and handled carefully, staylined (staystitched), and pressed with the grain.

J: If staylining (staystitching) proceeds from the wide to the narrower part of the garment piece (or so the fabric threads lie flat rather than ruffled up), the garment piece will remain on grain.

K. If the grainline of the pattern is laid on the grain of the fabric, the garment can hang as the designer planned.

VII. Corine has never done any sewing. She heard a radio program about learning to sew and the statement was made that the grain of the fabric is very important if a garment is to fit well. She has asked you to help her in knowing what to do when she sews so her garment will fit well.

List below four points you would tell her to follow when sewing to be sure that the fabric and garment will remain on grain.

Suggestions for scoring

Give a score of 1 for each of the following ideas:

1. Lay grainline of pattern on grain of fabric.
2. Cut and handle fabric carefully.
3. Stayline (staystitch) garment pieces by stitching from wide to narrow part of piece.
4. Press with the grain.

Generalization L: Time is saved and results are more likely to be successful if small pieces of a garment are completed before they are joined to larger units.

M: To lessen the chance of stretching, necklines are finished before armseyes.

N: The necklines can be more easily finished while the garment is flat.

VIII. The girls in a class have pieces cut out for their sleeveless blouses which button up the front. They are ready to decide on their plan for putting the parts together. Here are plans suggested by two girls.

Plan I

1. Stayline(staystitch) all bias and curved edges.
2. Stitch the shoulder seams. (Fronts to back)
3. Stitch the underarm seams.
4. Press seams.
5. Stitch front facings to blouse fronts.
6. Stitch neck facing to blouse back.
7. Press seams.
8. Stitch facings on armholes.
9. Press seams.
10. Finish bottom of blouse.
11. Press.

Plan II

1. Stayline (staystitch) all bias and curved edges.
2. Stitch the shoulder seams. (Fronts to back)
3. Stitch front and neck facings together.
4. Press seams.
5. Stitch facing on fronts and neck.
6. Press seams.
7. Stitch underarm seams of blouse and of armholes.
8. Press seams open.
9. Stitch facings on armholes.
10. Finish bottom of blouse.
11. Press.

Check (x) the better plan.

____ Plan I
_x_ Plan II

Check (x) the reason(s) which explain your choice.

____ 1. The more frequent the pressing, the better the garment will look.
____ 2. Easier steps should be done first, so the underarm seams need to be stitched before the facings are put on.
____ 3. Time is saved by pressing less frequently.
_x_ 4. Time is saved by joining small pieces before joining them to larger pieces.
_x_ 5. Facings can be put on the neckline easiest when the garment is flat.

Generalization J: If staylining (staystitching) proceeds from the wide to the narrower part of the garment piece (or so the fabric threads lie flat rather than ruffled up), the garment piece will remain on grain.

O: Staylining (staystitching) with the grain prevents stretching of bias and curved edges during fitting and stitching and holds the grain in correct position.

IX. On the Bulletin Board* are two sketches of the back of Marilyn's blouse ready for staylining (staystitching). The dotted lines and arrows (---->) indicate where and in what directions she should stitch for staylining (staystitching) each piece. Which one is the better way?

Check (x) the better way to stitch for staylining (staystitching)

_x_ A
____ B

Check (x) the direction(s) below which describe the way to stitch.

_x_ 1. Stitch with the grain.
____ 2. Work upward.
_x_ 3. Stitch from wide to narrower part.
or _x_ 4. Stitch in the direction that will push down the protruding threads (whiskers).
____ 5. Stitch from width to length.

Check (x) the reason(s) which best explain why staylining (staystitching) is needed.

____ 1. To prevent raveling while making the blouse.
_x_ 2. To prevent stretching while making the blouse.
____ 3. To prevent the seams from raveling when the blouse is worn.
____ 4. To keep fabric from pulling out at the seams when the blouse is worn.
____ 5. To keep the fabric from gathering up or puckering while stitching the seams.

*Description of illustrative material needed.

Display on Bulletin Board two copies of the back of a blouse pattern cut from heavy paper and marked with heavy lines as indicated below:

Generalization P: A feature can be emphasized by wearing colors which repeat or contrast the color of the feature.

Q: Colors which repeat but are brighter than a person's coloring will tend to dull her coloring.

X. Phyllis has beautiful "red" hair. It really is almost copper in color and is her best feature, so she wants to choose colors in her wardrobe that will be most becoming with it.

Which of these groups of colors would be the best ones for her to choose? Check (x) the ones that would be best.

x A. Browns	x E. Yellows, dull
x B. Yellow-greens, dull	____ F. Greens, bright
____ C. Reds	x G. Grays
____ D. Blues, bright	x H. Greens, dull

Check (x) the reasons which explain your choices.

x 1. Dull colors are better because they do not compete with her hair for attention.
____ 2. Pale colors are better because she has so much color in her hair.
____ 3. Bright colors are good because they are alive like her hair.
x 4. Contrasting colors will accent her hair coloring.
x 5. Colors which repeat the tones in her hair emphasize its colors.
____ 6. Bright colors will bring out the color of her hair.

Generalization R: Intense or bright colors advance; dull or greyed colors recede; darker values advance; lighter values recede.

S: Advancing colors and large designs call attention to size.

XI. Colors and designs can help to make a person appear larger or smaller. What are the effects of each of the 7 items listed below?

Effects

A. Will tend to make a person look larger.
B. Will tend to make a peron look smaller.
C. Will have little or no effect on the appearance, as far as size is concerned.

Indicate which one of these will result by putting a letter in the blank beside the color or design described below.

Colors and designs

__A__1. Garments of bright colors
__B__2. Fabrics with small designs
__B__3. Garments of dull or greyed colors
__A__4. Fabrics with large designs
__B__5. Garments of dark colors
__A__6. Garments of light colors
__C__7. Fabrics with no design

Check (x) the reason(s) which explain these results

____1. Colors do not affect size, only design makes a person look larger or smaller.
____2. Dull colors emphasize the faults of a larger person.
__x__3. Dark colors do not attract attention, so make a person seem smaller.
____4. All designs make a person seem larger.
__x__5. Dull colors stay in the background, are not so noticeable.
__x__6. Large designs often call attention to size.

Generalization T: Contrasts of color can be used to emphasize a center of interest. Since the costume is less important than the person, the face is usually made the center of interest.

U: A costume appears better unified when one of the colors is used in more than one area of the costume.

XII. Sandra has a new brown dress which she is planning to wear to parties, church, on dates, etc. The predominating colors in her wardrobe are green, brown, and beige (light tan). She wants to select suitable accessories to complete her new costume.

Which group of accessories would be better for her to select?

A	B
Brown hat	Brown hat with beige ribbon trim
Gold gloves	Beige gloves
Brown purse	Brown purse (gold initials
Green pumps	Brown pumps
Gold wooden beads	Yellow-orange silk scarf
Gold lapel pin	

Check (x) the group that is better for Sandra.

____A
_x_B

Check (x) the reason(s) for your choice.

____1. A has better amount of brown, B has too much
_x_2. Generally the face is the center of interest.
____3. The green pumps make A more exciting.
____4. The purse and pumps should match.
_x_5. The contrasting scarf accents her face.
____6. B has fewer colors.
____7. If colors are repeated, the parts of the costume will fit together better.
____8. Gold adds a contrast to the brown.

Generalization V: Clothing can be used to emphasize attractive features and de-emphasize unattractive features. Emphasis of a feature is created by repetition.

S: Advancing colors and large designs call attention to size.

XIII. Kay is very tall and thin, while June is short and plump. They want help in selecting the kinds of designs, colors, and fabrics which would be most becoming.

Place a K in the blanks at the left of the items Kay should avoid.*
Place a J in the blanks at the left of the items June should avoid.

__J__ Wide belts __1__
__K__ Over-emphasis of vertical (up and down) lines __1__
__J__ Bright colors in large areas __2__
__J__ Over-emphasis of horizontal lines __1,4__
__J__ Large designs in fabrics __3__

Place the numbers in the blank at the right of each item to indicate the reasons which best explain why the item should be avoided by Kay or June. The reasons may be used more than once.

1. Repeating a line calls attention to it.
2. Bright colors advance.
3. Large designs attract attention.
4. Horizontal lines cause the eye to follow around.

*Draw the pupils' attention to the word"avoid" so they will be sure to be aware of it.

Generalization W: If a color is so intense that it dulls one's personal coloring by comparison, the garment rather than the person will be emphasized.

X: Very intense colors cause a neutral, fair, or delicate skin to appear pale by contrast.

XIV. Sue needs a new winter coat. She wants a blue one because blue is becoming to her. When she and her mother went shopping for it, they found two blue coats that fit the family budget and would wear well. Sue is rather colorless; her hair is medium brown and her skin is pale. Which of the two blues, A or B, displayed on the Bulletin Board* would she be wise to buy?

Check (x) the better choice.

__x__ A
____ B

Check (x) the reason(s) for your choice.

__x__ 1. A dull blue, A, is better than the brighter blue, because it won't compete with her for attention.
____ 2. B will brighten her up.
____ 3. B will call attention to her coat and make her paleness less noticeable.
____ 4. She needs a lighter blue.
__x__ 5. B will make her seem more colorless by contrast.
____ 6. A is a better color for a coat.

Description of illustrative material needed.

Select from construction paper or fabric two blues of the same value (medium or dark), but differing in intensities. Designate the duller one A and the brighter one B. Display where all can see, but several inches apart so the brighter one will not make the duller one appear uninteresting.

Generalization Y: Plant fibers resist moths, tend to wrinkle easily, and, with the exception of rayon, are usually machine washable.

Z: Animal fibers and vicara tend to be resilient, elastic, and absorbent.

AA: Man-made, synthetic fibers tend to be wrinkle resistant, to melt at high ironing temperatures, dry quickly, and resist moths.

XV. The fibers our clothes are made of have different qualities, depending on their origin. At the right below are the three main groups of fibers. At the left is a list of qualities.

Place in the blank the letter(s) of the fibers which are high in the quality described for each of the 8 qualities.

Qualities	Groups of fibers
C 1. Dry quickly	A. Plant fibers
A 2. Wrinkle easily	B. Animal fibers and vicara
B 3. Elastic (wrinkles hang out)	C. Man-made synthetic
B 4. Absorbent	
A 5. Washable in a machine	
C 6. Melt at high ironing temperatures	
B & C 7. Resilient (good wrinkle recovery)	
A & C 8. Resist moths	

Generalization AB: Nails that chip and peel in layers may indicate that there is a lack of sufficient calcium and protein in the diet.

AC: Keeping the teeth clean is essential, but it will not replace the need for vitamins, minerals, and protein to protect them from decay.

AD: When the supply of protein, minerals, and vitamins is poor, the hair becomes dull, dry, harsh, and difficult to manage.

XVI. Patricia has a very poor appetite and dislikes many foods. This is typical of her day's meals and snacks:

Breakfast	Lunch	Dinner
None	Hamburger Coke	Macaroni & cheese French fried potatoes Apple pie

Snacks
Chocolate ice cream soda
Chocolate candy bar

If she eats this kind of meals and snacks, she can expect that her hair, teeth, and nails will be affected. Which of these nutrients does she need to add to her diet to help prevent these three difficulties?

Place in the blanks the numbers of the nutrients needed to overcome each of the difficulties. The nutrients can be used more than once.

Difficulties	Nutrients
1,3,4 A. Dull hair	1. Vitamin
3,4 B. Nails that chip	2. Carbohydrates
1,3,4 C. Decayed teeth	3. Minerals
	4. Protein
	5. Fat

Generalizations AE: Although the acne of adolescence may be unrelated to nutrition, a good all-round diet, together with cleanliness, may be expected to help combat it.

AF: Cleaning the skin regularly is essential to keep the pores open and clean, as clogged pores develop blackheads.

XVII. Mary Ann, who is 14, is having trouble with her skin. She frequently has pimples and blackheads and wants to know what might help her to clear up her complexion.

Check (x) the three suggestions below that are the best ones for her to try first.

____1. Use a good face cream to cleanse her face daily.
____2. Avoid using cosmetics.
____3. Use alcohol to close the pores after washing or creaming her face.
____4. Avoid eating candy.
____5. Drink lots of water.
____6. Avoid starchy foods.
____7. Squeeze the blackheads and pimples as soon as they are ready to be removed.
_x_8. Eat a balanced diet.
_x_9. Wash her face two or three times a day with soap.
____10. Avoid greasy or fat foods.
_x_11. Keep hands away from face.
____12. Do nothing; they will disappear when she is older.

Write a brief explanation below of why you selected the three you checked.

*HOME ECONOMICS EDUCATION; *STUDENT EVALUATION; GRADE 9; *CHILD DEVELOPMENT; TESTING; *TEST CONSTRUCTION; *ACHIEVEMENT TESTS

Models for test items and evaluation devices are provided for adaptation by home economics teachers to meet the needs of specific ninth grade child development classes in the comprehensive high school. Evaluation materials were developed through research projects and trial use in Iowa schools by heterogeneous school groups. The materials are based on subject matter areas: developmental tasks, individual differences, and family relationships, values, interests, and roles. Included are: (1) objectives to which the evaluation materials relate, (2) suggestions for introducing and interpreting the results of the tests, and (3) the problems, presented as capsulated experiences, illustrating generalizations which require the student to give not only the answer but also justification for the answer. Other evaluation materials for home economics areas, all using similar formats, are available as VT 005 747-VT 005 757 (ARM Summer 1969). (FP)

OBJECTIVES AND DEVELOPMENT AND USE OF TEST ITEMS

I. Objectives: These evaluation materials relate to the following objectives.

1. To accept, enjoy, and be interested in children
2. To grasp the whole range of human development through experiences with a range of ages
3. To develop respect for children as persons
4. To understand himself, including the effects of his behavior on others.

II. Development of Test Items: The items in this packet are based on the above objectives and the generalizations given at the top of each page containing a test item. The solutions and reasons for the problems include misconceptions collected from Iowa high school pupils.

III. Selection of items to combine into a test: Choose the items which involve the generalizations on which you wish to determine where your pupils are at any stage of learning (pre-test, during unit, at the end of unit, or as a part of semester test).

IV. Provision of a setting and directions: Here are a few suggestions which might be used with child development tests. You can think of others.

HOW WELL DO YOU UNDERSTAND CHILDREN AND HOW WELL CAN YOU TAKE CARE OF THEM?

When you have been with children (your brothers, sisters, cousins, nieces) you may often have been surprised at things they did or said and you wondered why they acted that way. Or you may have been responsible for a child and needed to know how to take care of him.

Several situations are described on the following pages which may be like ones you have wondered about. Read each one carefully and then check (x) beside the statement(s) which you believe answer the question best.

In order to force pupils to consider each solution and/or reason, do <u>not</u> indicate the number of statements they are to check.

V. Scoring the test: To obtain a score for each girl total <u>only</u> the correct solutions and/or reasons. (See key on mimeographed copy of each item). It is better not to make deductions for incorrect choices because some of the problems are of such a nature that certain of the reasons could conceivably be true under some circumstances. The key provides for determining only those which make use of the particular generalization(s) listed at the top of each page. Also research on these items indicates that deducting for guessing has little effect on the relative size of the scores unless a student checks an unreasonably large number of responses.

VI. Interpreting the results of the test: The results can be looked at several ways to determine how well your pupils can apply the generalizations involved in the test.

(1) The size of the scores in relation to the total possible score gives a general idea of the class as a whole. Individual

scores indicate which pupils have highest achievement and which need more experiences. A look at the responses of individual pupils, particularly those whose scores are low, will indicate places where special help is needed.

(2) If the test has been given before and also after the unit has been taught you can see the extent of progress, provided the particular problems have not been discussed in class.

(3) Tabulating the total number of pupils who selected each solution and reason gives you clues to needs for learning, whether the test is used as a pre-test or after some instruction. Noting the generalizations which they failed to apply and the misconceptions (incorrect responses), you have bases for planning experiences. Below is an illustration of an item that was administered to 137 ninth-grade pupils.

When Doris, age 14, was taking care of her brother Billie, 2, he picked one of the decorations off the Christmas tree and threw it on the floor where it broke. He looked up at Doris and smiled.

What would you do if you were Doris?

Check the answer(s) you think <u>best</u>.

__74__ A. Explain to him that he must not take the decorations off the tree
__15__ B. Keep him away from the tree
__26__ C. Put the decorations high enough on the tree so that he cannot reach them
__12__ D. Make him clean up the broken glass
__9__ E. Scold him
__20__ F. Spank his hands
__18__ G. Ignore him
X __41__ H. Put less valuable decorations on the lower branches of the tree.

Check the reason(s) for choosing your answer(s)

__35__ 1. He will learn not to bother the tree again
__15__ 2. He may cut himself
__32__ 3. He is too small to understand why he can't do as he pleases
__33__ 4. He will give up if no one is amused but himself
__6__ 5. He'd be afraid to do it again
__51__ 6. He needs to learn to understand right and wrong
X __30__ 7. It is natural for Billie to want to throw things
__30__ 8. He needs to learn that it isn't a joke
__30__ 9. If you act displeased, he'll understand better.

It is evident from the figures that a large number of the pupils need help in understanding small children since more than half of them would solve this problem by merely explaining (Solution A). A fairly large group would punish him (Solutions D, E, & F). Only 41 of the pupils applied the generalization (Solution H): We all learn by experimenting and, therefore, make mistakes.

Thirty pupils realized that it was natural to throw things. More than one-third expected a two-year old to learn right from wrong and an equal number believed that showing displeasure will help him understand.

CAN YOU APPLY WHAT YOU KNOW ABOUT CHILDREN?

A summary is given below of what happened when a ninth grade girl, Alice, stayed with Billie while his parents went to the show. Following are listed some of the things she did and one of the summarizing statements she applied as she took care of Billie. Notice that for two things which Alice did, there are no summarizing statements listed. Will you write them in the proper spaces?

What Happened When I "Baby-Sat" at the Coxes

The Coxes asked me to supper at 5:30 so that I could get acquainted with Billie, age $1\frac{1}{2}$, before they left.

Mr. Cox showed me where to hang my coat and took me in to see Billie. He said, "This is Alice, Billie." I said, "Hello, Billie." Billie smiled and held up his hand to show me his rubber doll. Then he sat and looked at me.

When supper was ready Mr. Cox sat Billie at the table and began to feed him while Mrs. Cox put our food on the table. After supper I watched Mrs. Cox put Billie in his crib and turn off the lights.

When Mr. and Mrs. Cox were ready to leave, they said that they were going to the Rosemount theater; also that because Billie had recently been vaccinated, they were leaving some crushed aspirin in a spoon to give with apple sauce if he cried. They said that he usually fussed a little before he went to sleep.

After they had been gone about an hour Billie began to cry. He was uncovered so I covered him up and let him cry a little, but when he continued to cry I gave him the aspirin with apple sauce and then walked the floor with him until he was asleep.

What Alice Did	Summarizing Statements Alice Applied
Alice said, "Hello, Billie", and then sat down beside him and looked at his doll.	Children adjust slowly to new situations.
Let Billie fuss a little.	
Pick him up and walk the floor with him.	

(Suggestions to Teachers)

CAN YOU APPLY WHAT YOU KNOW ABOUT CHILDREN?

You may find this type of device useful after your pupils have had some opportunity to study about children. Because there is an illustration of what is wanted for an answer, it may prove helpful as one of the first devices used in testing ability to apply what has been learned. This type of device could also be used at the end of the unit.

If you find this helpful, you could develop other devices like this using different situations which would determine the understanding of other generalizations.

The summarizing statements which should be supplied by the pupil are: (1) each baby has his own way of going to sleep and (2) some comforting may bring a relaxing response. You will not, however, expect pupils to give these statements exactly but you will need to decide whether their statements are consistent with these. If not, their statements will indicate need for additional experiences.

MAKING USE OF WHAT YOU KNOW ABOUT CHILDREN

A description is given below of what happened when Marie stayed with children while the parents were gone one evening. Following are a list of some of the things she did and spaces for you to write in the summarizing statements which she applied. One example is given.

Marie's Baby Sitting Experience

Marie was visiting her older sister, Sue, and brother-in-law, Jim, and their two children, Denny 7 and Pamela 5. During her visit, Sue and Jim accepted an invitation to a dinner party and asked Marie to stay with the children.

They left about 5:30 p.m. while Marie was getting supper. After supper, Denny asked to go bicycle riding. Marie told him to come back in one hour. Marie asked Pam to help wash the dishes. While they were doing this, Marie saw Denny across the street with boys about his size who also had bicycles.

When the dishes were done, Pam played in the sandbox but Denny was not in sight when the hour was up. Marie took Pam and walked a block down the street and finally saw the boys bicycles in the next block. She returned to the house and helped Pam get ready for bed.

About thirty minutes later Denny came home. To Marie's comment, "Denny, you're a little late, aren't you?" Denny replied, "Well, I didn't know the time." She said that it was usually hard to keep track of time when a person was having fun.

When Denny was ready for bed, Marie read a story, then each child got into bed and she returned to the living room. She could hear them talking to each other across the hall. After a while they stopped talking.

What Marie Did	Summarizing Statement She Applied
Example Marie asked Pam to help wash dishes.	Example Sharing work helps a child feel that he is an important family member
She helped Pam wash herself and get ready for bed.	
She understood and accepted Denny when he was late.	

(Suggestions to Teachers)

MAKING USE OF WHAT YOU KNOW ABOUT CHILDREN

Objective 5: To help the pupil accept, enjoy and be interested in children.

Objective 2: To help the pupil grasp the whole range of human development.

Generalizations: L Older children can help smaller children form desirable habits.
C There is a mature behavior at any stage of development.

You may find this evaluation device helpful during or at the end of a unit on child development to learn whether students can recognize the application of generalizations. If you find this device useful, you could prepare others similar to it for the purpose of checking on students' ability to apply other generalizations.

Those generalizations which are listed above are your guide in interpreting what students write. The students' statements, however, may not be worded exactly like these. For example, instead of (L) above, the student may write, "She was trying to teach Pam how to do things for herself." One misconception which a pupil gave for generalization (L) in a preliminary trial of this device, was: "Pam had done a good turn for Marie so she did one for Pam."

After looking over the responses of the students, you may wish to discuss the results with the entire class. Doing this would give you an opportunity to show them which generalizations they were able to apply in this situation and to clarify any misunderstandings.

GOOD BABY SITTERS DON'T JUST SIT

Girls and boys in high school sometimes have opportunities to baby sit with young babies. As baby sitters usually have full responsibility for the child, it is necessary for them to be able to do a variety of things for the child. To help you check yourself on your ability to do some of these things, a list of some of them is given. Check them as follows:

Mark with an X those you know how to do well.

For each one which you marked X, write in the last column why you think you can do it well.

Mark with a ✓ those you need to learn to do better.

For each one which you have marked ✓, write in the last column what you could do to learn how to do it better. Example:

Responsibility	Can do well	Need to learn to do better	How can I learn to do it better or Why I think I can do it well
1. Change diapers		✓	Practice doing it on a doll
2. Prepare formula	X		I have prepared the formula for my sister's baby many times

CHECK LIST

Responsibility	Can do well	Need to learn to do better	How can I learn to do it better or Why I think I can do it well
1. Burp a baby			
2. Warm up bottle for feeding			
3. Find out what is making a baby cry			
4. Comfort a baby who is crying			
5. Approach a baby in a friendly manner			
6. Play with a baby in ways which use his abilities			

(Suggestions to Teachers)

GOOD BABY SITTERS DON'T JUST SIT

This type of evaluation device may be used before teaching the unit on child development or after you have begun the unit to help pupils preparing for baby sitting decide what they still need to learn. They may need to have some help in filling in the column "How I Can Learn To Do It Better."

When the pupils have finished checking the device you might tabulate the results and have a discussion with the class to make plans for learning to do better those things which they marked with a ✓. You could also have a short conference with each pupil to discuss her checks.

HOW DO YOU FEEL TOWARD CHILDREN 2 TO 5 YEARS OLD?

Girls in high school usually have young brothers and sisters or have taken care of neighbor's children enough to give them some idea of the way they feel toward children two to five years old. Will you show how you feel about children this age by writing in the spaces below about each of these things. Do not sign your name.

1. How do you feel about their growth (their size, the way they stand, walk and handle themselves)?
   Examples: 1. They bother me because they never sit still.
   2. I like to see them learn to do new things like trying to ride a tricycle.

2. How do you feel about the things they must do regularly such as eating and sleeping?
   Examples: 1. They make too much fuss about going to bed on time.
   2. They learn bad habits of eating very quickly.

3. How do you feel about the way they act toward other children their age?
   Examples: 1. It is fun to see them try to make friends.
   2. Most kids this age are mean to other kids.

4. How do you feel about the way they share toys?
   Examples: 1. They are selfish about their toys.
   2. They are too young to share their things.

5. How do you feel about the questions they ask?
   Examples: 1. They ask too many questions.
   2. Their questions are funny.

6. How do you feel about the way they show affection?
   Examples: 1. One minute I think they like me: the next minute I think they hate me.
   2. I like the ones who will sit on my lap.

7. How do you feel about the way they act when they're mad?
   Examples: 1. There's no sense to the way they kick and yell.
   2. They don't stay mad very long.

Index to Generalizations and Test Items for Use in
Evaluating Learning in Child Development: 9th Grade

A. Individuals differ in rate and pattern of growth. Test item II.

B. Each individual has an urge to grow up and prefer more mature behavior. Test item XIII.

C. There is a mature behavior at any stage of development. Test items X, XI.
   1. At eight, possessions are very important. Test item XVI.
   2. Two-year-olds are very active. Test item XIV.
   3. At seven to ten, an interest in stories, radio, and television is high. Test item VI.

D. The basic needs of adequacy, love, and affection recur at each level of development. Test item XVII. (See also Gen. P)

E. Children adjust slowly to new situations. Test item I.

F. It takes time for children to learn; their memory span is short. Test item XXII.

G. We all learn by experimenting and, therefore, often make mistakes. Test items XV, XX.

H. Exploring is a very important part of a young child's learning. Test items XVIII, XXIII, XXIV.

I. Learning takes place easier and quicker when the learning experience is keyed to the child's level of development. Test item IV.

J. As we become more mature, we find acceptable ways of releasing tensions. Test item V.

K. Sharing work and play helps a child feel that he is an important family member. Test item IV.

L. Older children can help smaller children form desirable habits. See Making Use of What You Know About Children.

M. Emotions in early childhood are intense and transitory. Test item VIII.

N. Older people tend to judge children by their own standards of behavior. Test item IX.

O. Behavior is caused by past and present experiences and inheritance. Test items III, XII, XXI.

P. Every human being need affection, needs to feel adequate, and needs recognition as a worthy person from those he cares about. Test item XIX. (See also Gen. D)

Q. Some of the things that happen to us when we are very young help to determine our concepts and attitudes later in life. Test item VII.

Generalization E: Children adjust slowly to new situations.

I. Because of guests in the house, Ann, age 7, has been told to sleep with Jewell, her 15-year-old sister. Ann, accustomed to going to bed at 8:30 o'clock, stays awake until Jewell gets to bed about 10:00 and then wants to talk.

What might explain why Ann stayed awake?

Check the reason(s) which <u>best</u> explain Ann's behavior.

_____ 1. Ann wants to act grown-up like her sister.
_____ 2. The room is different and that gives Ann more things to stay awake and look at.
_____ 3. Being in a strange bed, she is afraid to go to sleep.
_____ 4. Ann likes to talk to her older sister.
x* 5. Ann is excited by the change in beds and is unable to go to sleep as she usually does.
_____ 6. Ann thought it would be fun to have someone to talk to.
_____ 7. She is curious about her older sister's activities.

* x indicates the best response for this generalization.

Generalization A: Individuals differ in rate and pattern of growth.

II. Geraldine and Josephine are 14-year-old twins. Geraldine is two inches taller and looks as if she were a year older than her sister. She feels self-conscious and clumsy with others when Josephine is around because they repeatedly remark about the difference in size.

What are the reasons why these girls differ in size?

Check the reason(s) you think best explains the difference in size.

____1. Geraldine may eat more than her sister.
____2. Their glands may have acted differently.
x* 3. They are two different people and Geraldine just grew faster.
____4. Geraldine is healthier than Josephine.
x* 5. Geraldine may have gone through her stage of rapid growing earlier than her sister
____6. Geraldine probably was larger when she was born than Josephine was.
____7. This difference was due to the father and mother being different in size.

Generalization O: Behavior is caused by past and present experiences and inheritance.

III. Mr. and Mrs. Lowe believe that children should learn to obey their parents. Their only child, 5-year-old Dean, does what he is told to do but it sometimes takes shouting or spanking to get him to obey. His parents have been worried recently about Dean's play with other children. He yells at them, bosses them, and gets very angry if they refuse to do what he tells them to do.

Why does Dean act this way?

Check the reason(s) which <u>best</u> explain why Dean acted as he did.

____1. The other children may not be nice to Dean.
____2. He is probably a leader by nature.
____3. If his parents treat him that way, he feels he has a right to take revenge on someone.
____4. He may be spoiled.
____5. He thinks he is acting like a grown-up by being bossy.
_x_6. He believes that is the way to act, since his parents treat him that way.
____7. Being bossy is a stage all small children go through.

Generalization I: Learning takes place easier and quicker when the new experience is keyed to the child's level of development.

Generalization K: Sharing work and play helps a child feel that he is an important family member.

IV. As Mrs. Smith washed the dishes she let four-year-old Marcia wipe the pots and pans. Marcia said, "I'm helping Mommy."

Why was Mrs. Smith wise to let Marcia wipe the pots and pans?

Check the reason(s) you think explain best why Mrs. Smith should let her help.

____1. She was teaching Marcia to be a good housekeeper.
_x_2. She knew if Marcia dropped a pan it wouldn't break.
____3. Mrs. Smith wanted to let Marcia think that she was a big girl.
____4. Mrs. Smith wanted to keep Marcia out of mischief.
_x_5. Mrs. Smith wanted to make Marcia feel that she was important.
____6. She was getting Marcia to love her.

Generalization J: As we become more mature, we find acceptable ways of releasing tensions.

V. For several summers while Van was very small he and his mother went to his uncle's for a few days. When he was five he went without his mother for the first time. On his return home he ran to his mother, threw his arms around her skirt, and said, "I'm never going away again."

Three years later when he returned after a visit to the farm, he ran down in the basement to see his dog and check on his toys. As he came up, he asked about his pals. Then he said, "I had a good time, but I'm glad to get home."

Why do you think Van acted differently when he arrived home at the end of these two visits.

Check the reason(s) which best explains why Van acted differently.

___1. As he became older, he was less attached to his mother.
___2. He had learned to adjust to his aunt and uncle and to being on the farm.
___3. As he became older his dogs and friends meant more to him.
___4. He became more adventurous as he became older.
___5. When he was younger, something may have frightened him when he was on the farm.
_x_6. As he became older he expressed his feelings. more like older children.
___7. He became interested in more things, and had a better time.

Generalization C3: There is a mature behavior at any stage of development: At seven to ten an interest in stories, radio, and television is high.

VI. Mrs. Smith told Dorothy to see that she and Connie went to bed while she went to pick up their father. Dorothy was fourteen years of age and Connie was seven. Dorothy went upstairs and got ready for bed and called down to Connie to hurry. Connie, who was looking at a book, said "Oh, I want to finish this story." Half an hour later the mother returned and asked Connie why she had not gone to bed.

Why do you think Connie acted as she did?

Check the answer(s) you think <u>best</u> explain her not going to bed.

____1. She didn't want to obey her older sister.
____2. Connie wanted to see her father before she went to bed.
____3. She wanted to act grown-up.
____4. Most children Connie's age don't like to go to bed, and will think of any excuse they can to stay up.
____5. Connie was spoiled.
_x_6. Connie is at the age when children become very interested in stories.
____7. She wasn't sleepy.

Generalization Q: Some of the things that happen to us when we are very young help to determine our concepts and attitudes later in life.

VII. Mrs. Burns was disturbed when she heard her five-year-old daughter, Sara, and Sue, the eight-year-old neighbor girl, talking. Sue was telling Sara that the stars were holes through which God could look down upon her to see if she were good.

Why did Mrs. Burns have reason to be disturbed about what Sue was telling Sara?

Check the reason(s) you think <u>best</u> explains why Mrs. Burns was disturbed.

____1. She didn't want Sara to think God only watches you at night.
____2. She had neglected to teach her own child about God.
____3. She was afraid Sara would tell these stories to someone else.
_x_4. She thought this might influence Sara's attitudes in later life.
____5. She had taught Sara something else about the stars, and Sue would get her confused.

Generalization M: Emotions in early childhood are intense and transitory.

VIII. Arthur, 11, Nell, 6, and Mary, 17, were cleaning off part of their lake for a skating rink. Arthur and Nell started arguing about whose turn it was to use the snow shovel. Arthur insisted that he hadn't used it long enough and Nell insisted that it was her turn. Nell said, "If I can't have it, I'm leaving." She started for the house, but when half way there she turned around and went back to help finish the job.

Why did Nell turn around and come back to help finish the job?

Check the reason(s) you think <u>best</u> explain why Nell came back?

__x__1. She was very angry for a while, but she soon forgot the argument.
_____2. She wanted to show her brother she would help in spite of the argument.
_____3. She thought her mother might scold her for fighting with her brother.
_____4. She decided it wouldn't do any good to go home.
_____5. She thought Arthur might tease her.

Generalization N: Older people tend to judge children by their own standards of behavior.

IX. Mr. and Mrs. Jones were teaching Joy, age 9, and Jim, age 12 to play canasta. One evening Mr. Jones and Jim played against Mrs. Jones and Joy. Mr. Jones was quite disturbed when Jim looked over at Joy's cards while playing. He said that they would stop playing if Jim continued to cheat.

Why might Mr. Jones have been disturbed by Jim looking at Joy's cards?

Check the reason(s) you think <u>best</u> explain Mr. Jones being disturbed.

___1. Mr. Jones wanted to win the game fair and square.
___2. Mr. Jones thought Joy might follow Jim's example of cheating since she was younger.
_x_3. Mr. Jones was expecting the same thing from Jim as from adults.
___4. Mr. Jones thought Jim might cheat when playing with other children and they wouldn't want to play with him.
___5. Mr. Jones was tired and it made him irritable for Jim to look at Joy's cards.
___6. Mr. Jones doesn't like people who cheat.

Generalization C: There is a mature behavior at any stage of development.

X. Shirley often takes care of her younger brother Dale, a healthy, happy boy, two years old. She and her mother are disturbed because Dale wets the bed. The doctor has told them that there is nothing physically wrong with Dale.

Should Shirley and her mother be disturbed about Dale's bed wetting?

Check the answer you think best.

____A. Yes
_x_B. No

Check the reason(s) for choosing your answer.

____1. He is old enough to stop wetting the bed.
____2. He may be upset emotionally.
____3. Boys wet the bed longer than girls do.
____4. He probably is afraid to go to the bathroom alone at night.
_x_5. When he gets a little older, he probably will stop.
____6. If he isn't stopped, he will get worse.

Generalization C: There is a mature behavior at any stage of development.

XI. One noon Sally's mother asked her to watch her younger brother and sister after school while she called on a friend. When fourteen-year-old Sally came home from school, she found Willis, age 8 and several of his third-grade friends playing baseball in the yard. They were arguing about who would be the next batter. Sally became quite upset about the boys arguing because she thinks they should play together without quarreling.

Should Sally have become upset?

Check the answer you think best.

____A. Yes
_x_B. No

Check the reason(s) for choosing your answer.

____1. Sally should help settle the argument.
____2. The boys must learn to work out disagreements.
_x_3. It is natural for boys this age to quarrel.
____4. The boys could probably settle it all right.
____5. Willis could lose some of his friends because of the argument.
____6. Willis needs to learn how to get along with others.

Generalization O: Behavior is caused by past and present experiences and inheritance.

XII. Tommy, a four-year-old, has seldom played with anyone except his younger sister, age 3. When his 4-year-old cousin John comes with his mother from another town to spend a day, Tommy refuses to play with him. On the rare occasions when Tommy has been with a group of children, he either just watched the others, or he played entirely by himself.

If you were an older sister, what could you do about his social development?

Check the answer(s) you think best.

_x_ A. Give Tommy more opportunities to play with children.
____ B. Encourage Tommy to play with other children by offering him a reward.
____ C. Make him play with other children.
____ D. Explain to Tommy why he should play with other children.
____ E. Leave him alone.

Check the reason(s) for choosing your answer(s)

____ 1. Tommy should be stimulated to play with other children.
____ 2. Tommy needs help to act like a four-year-old.
_x_ 3. Tommy should have experience playing with children.
____ 4. Tommy will learn to play with others if given time.
____ 5. Tommy needs to understand the benefits of playing with others.

Generalization B: Each individual has an urge to grow up and prefer more mature behavior.

XIII. Five-year-old Charlene loves to use her sister Alice's lipstick and does so at every opportunity. Alice, who is fifteen, is disturbed but doesn't know what to do.

What would you do?

Check the answer(s) you think best.

____A. Explain to Charlene that she isn't old enough to wear lipstick.
____B. Spank her when you find her using the lipstick.
____C. Scold her.
_x_D. Give Charlene a tube of lipstick that she can have for her own.
____E. Tell mother and let her take care of Charlene.
____F. Put lipstick away where she can't find it.

Check the reason(s) for choosing your answer(s).

____1. She is old enough to learn to mind.
____2. Older people will make fun of her if they see her wearing lipstick.
____3. Most children go through an age when everything they see they want to try.
____4. Charlene would be happy with her own lipstick and leave Alice's alone.
____5. Charlene will listen more to her mother than to Alice.
_x_6. Charlene likes to imitate Alice because she is older.
____7. Charlene is old enough to know that she should leave other people's things alone.
____8. Five-year-olds are curious.

Generalization C2: There is a mature behavior at any stage of development: Two-year-olds are very active.

XIV. Deborah took her 2-year-old brother, George, with her the other day when she visited an elderly aunt and uncle. George was told before they left home that the aunt and uncle were old and noise would bother them so he would have to sit quietly while Deborah talked. When they arrived, George was very quiet and sat in a big chair for about 5 minutes saying nothing, then he began to wander about the house, and interrupt his sister to ask questions.

If George were your brother, what would you do?

Check the answer(s) which you think best.

_____A. Make George sit down.
_____B. Offer to get him something he liked if he'd be quiet.
_____C. Threaten to punish him.
_____D. Make him respect his aunt and uncle.
_____E. Punish him for disobeying.
__x__F. Give him something to do that won't disturb others.

Check the reason(s) for choosing your answer(s).

__x__1. Two-year-olds are very active.
_____2. George should be taught to mind.
_____3. Two-year-olds can understand promises.
_____4. He would learn right from wrong.
_____5. He can learn to play quietly.
_____6. He wouldn't be running around doing nothing.

Generalization G: We all learn by experimenting and, therefore, often make mistakes.

XV. The Williams were having their house painted and four-year-old Elaine was out in the yard playing. When her fourteen-year-old sister, Mae, called her for lunch, Elaine answered her from the top of the ladder leaning against the house.

Should Elaine be punished for climbing upon the ladder?

Check the answer you think best.

_x_ A. No
____ B. Yes

Check the reason(s) for choosing your answer.

____ 1. Elaine could have fallen and hurt herself.
____ 2. The ladder should have been put away.
_x_ 3. Climbing the ladder was an adventure for her.
____ 4. A four-year-old should know better than to climb a ladder.
____ 5. She would remember not to climb the ladder again.
____ 6. It is natural for Elaine to copy what she sees others do.
_x_ 7. She did not know the danger of high places.

Generalization C1: There is a mature behavior at any stage of development: At eight possessions are very important.

XVI. After Bob, age 8, had seen his first football game he began to save money to buy a football. He worked hard running errands, raking leaves, etc. until he'd saved enough to buy the football. Once he had it in his possession he could not part with it. At meal time he insisted on keeping the football under his chair. Fourteen-year-old Greta had invited a new friend, Betty Jo, for dinner and she wanted her family to make a good impression.

What should Greta do about Robert and his football?

Check the answer(s) you think <u>best</u>

____A. Ask her parents not to let him come to the table.
____B. Take the football away from Bob until after dinner.
_x_C. Let Bob keep the football under his chair.
____D. Tell her parents and let them see that he puts the football away.

Check the reason(s) for choosing your answer(s).

____1. He would not make a fuss and spoil the dinner.
____2. Eight-year-olds should learn to mind.
____3. He would get the football out of his system.
_x_4. Eight-year-olds are proud of new possessions.
____5. Eight-year-olds should know better than to bring a football to the table.

Generalization D: The basic need of adequacy, love and affection recur at each level of development.

XVII. Two neighbor women hire one baby sitter, Helen, to care for their children. Helen notices that every time two-year-old Jane asks for a drink, four-year-old Joe wants one. Also, when Helen picks up Jane, Joe wants to be picked up.

If you were Helen, how would you help Joe act more like a four-year-old?

Check the answer(s) you think best.

____A. Explain to Joe that he is older than Jane.
____B. Tell Joe not to be selfish.
____C. Ignore Joe.
_x_D. Give Joe more attention.
____E. Make Joe wait until you have finished with Jane since she is younger.

Check the reason(s) for choosing your answer(s).

____1. Helen should avoid making Joe jealous.
____2. He should be taught good manners.
____3. Joe will stop acting like a two-year-old if nobody pays any attention to him.
____4. He should understand that Jane needs more attention than he does.
____5. Joe needs to be broken of this habit.
_x_6. Joe will feel important and do more things for himself.

Generalization H: Exploring is a very important part of a young child's learning.

XVIII. Susan, $3\frac{1}{2}$ years, watched her sister, Frances 14, cut out a dress. When Jane left to answer the telephone, Susan picked up the scissors and cut the material.

What would you do if you were Frances?

Check the answer(s) you think <u>best</u>.

____ A. Tell your parents and let them punish her
____ B. Explain that she is never supposed to bother other people's things unless they say she can
____ C. Give her a spanking
____ D. Scold Susan just enough to scare her
_x_ E. Give her some scraps and part of the pattern that you are not using and let her cut out something.

Check the reason(s) for choosing your answer.

____ 1. She is old enough to be punished for things she does wrong
____ 2. Children need to learn to let other people's belongings alone
____ 3. Susan would be afraid to cut material again
_x_ 4. Susan can learn to do things by trying what she sees other doing
____ 5. If Susan had something to work with, she wouldn't bother Frances' things.

Generalization P: Every human being needs affection, needs to feel adequate, and needs recognition as a worthy person from those he cares about.

XIX. Saturday morning Coleen's mother was keeping her appointment with the dentist. Fourteen-year-old Coleen was left in charge of David. Several unfortunate things happened to David, age 8. First he broke the propeller on the model airplane he was building. Then his shoe came untied and when he tried to retie it the shoestring broke. David ran into his bedroom crying, "Everything happens to me."

What should Coleen do?

Check the answer(s) you think <u>best</u>.

____A. Coleen should try to fix the propeller on his airplane and broken shoestring.
__x_B. Coleen should interest David in playing a game with her which he liked and could play well.
____C. Coleen should explain that all through life many things will happen to him that he will not like and he should not let such little things bother him.
____D. Coleen should teach David to be careful and to try not to break his things.

Check the reason(s) for choosing the answer(s) you did.

____1. David is not old enough to work things out by himself.
____2. David should be taught to be more careful with his things.
____3. If you help children when they have problems, they will feel much better and stop crying.
__x_4. David needs to have confidence in himself.
____5. David is going to have to face much harder problems in later life, and he should learn early that he can't run into the bedroom crying every time something happens.
____6. Play helps children forget their problems.

Generalization G: We all learn by experimenting and, therefore, often make mistakes.

XX. When Doris, age fourteen, was taking care of her brother Billie, age two, he picked one of the decorations off the Christmas tree and threw it on the floor where it broke. He looked up at Doris and smiled.

What would you do if you were Doris?

Check the answer(s) you think best.

___ A. Explain to him that he must not take the decorations off the tree.
___ B. Keep him away from the tree.
___ C. Put the decorations high enough on the tree so that he cannot reach them.
___ D. Make him clean up the broken glass.
___ E. Scold him.
___ F. Spank his hands.
___ G. Ignore him.
_x_ H. Put less valuable decorations on the lower branches of the tree.

Check the reason(s) for choosing your answer(s)

___ 1. He will learn not to bother the tree again.
___ 2. He may cut himself.
___ 3. He is too small to understand why he can't do as he pleases.
___ 4. He will give up if no one is amused but himself.
___ 5. He'd be afraid to do it again.
___ 6. He needs to learn to understand right and wrong.
_x_ 7. It is natural for Billie to want to throw things.
___ 8. He needs to learn that it isn't a joke.
___ 9. If you act displeased, he'll understand better.

Generalization O: Behavior is caused by past and present experience and inheritance.

XXI. Hazel, 16, is concerned about the way her sister, 4-year-old Ann, plays with other children. There are few children under 6 in their neighborhood so Ann usually has to play alone. When she does have a chance to play with other children, she refuses to let them use her toys or even to take turns.

What would you think Hazel could do?

Check the answer(s) you think best.

_____A. Make her share her toys when she is with other children
__x__B. Find ways for Ann to be with children her age often
_____C. Play with Ann and teach her to share her toys
_____D. Explain to Ann that she should share her toys
_____E. Take her toys away from her for a little while.

Check the reason(s) for choosing your answer(s).

_____1. She needs to learn that it is fun to share
_____2. Ann will have to share when she is older
__x__3. It will take time for Ann to learn to share
_____4. Other children won't play with Ann if she is "stingy" and refuses to share
_____5. Ann will be spoiled and always want her way, if she continues as she is
_____6. Ann needs to learn to share while she is young so that she will have more playmates.

Generalization F: It takes time for children to learn; their memory span is short.

XXII. Four-year-old Jimmy has been told many times by Mary, the baby sitter, to put his toys away. Jimmy never seems to remember as he must always be reminded.

What do you think Mary should do?

Check the answer(s) you think best.

____A. Pick up the toys herself for him.
____B. Explain to him that if someone steps on his toys they will be broken.
_x_C. Keep on reminding him to put his toys away.
____D. Don't let him do anything he really wants to do, until he picks up his toys.
____E. Help him pick up his things, but let him pick up most of them.
____F. Scold him if he does not pick them up.
____G. Don't do anything, just leave them there.

Check the reason(s) for choosing your answer(s).

____1. Children should learn to take some responsibility.
_x_2. Small children do not remember things very long.
____3. A baby sitter is in charge when the parents are away.
____4. Jimmy is too small to do the job all by himself.
____5. Jimmy likes his toys, and he does not want them broken.
____6. Children disobey deliberately and Jimmy is especially stubborn.
____7. It is handier for the children to have their toys around.
____8. Jimmy learns more slowly than most four-year-olds.

Generalization H: Exploring is a very important part of a young child's learning.

XXIII. Mrs. Brown asked Sally, who is in the ninth grade, to stay with Richard, three, while she went shopping. When Sally arrived Mrs. Brown told her that Richard was making mud pies in the back yard. Sally found him with muddy hands and smudges on his face and clothes.

What should Sally do?

____A. Ask him politely to come in the house and wash his hands and face.
__x B. Let him make mud pies until he is through, and then take him in the house to clean him up.
____C. Take him in the house and clean him up. Tell him he must stay in the house the rest of the afternoon because he has been naughty.

Check the reason or reasons for choosing your answer.

____1. If he has mud on his hands and face, he might rub it into his eyes or get it in his mouth.
__x 2. Children should have a chance to learn about things around them through play.
____3. He was contented and if she tried to make him do something else, he would get cross.
____4. Children need to be taught early not to get dirty.

Generalization H: Exploring is a very important part of a young child's learning.

XXIV. Two-year-old Betsy dropped a spoonful of mashed potatoes on the floor while she was eating her lunch. She looked in surprise at the potatoes on the floor and immediately refilled her spoon and dropped more potatoes in the same place. She listened thoughtfully for a moment and then said, "It didn't make any noise!"

In addition to cleaning the floor, what would you do if you were feeding Betsy?

____A. Give her smaller portions of potatoes.
____B. Explain to her it is bad to throw potatoes on the floor.
____C. Spank her hands lightly. Tell her not to do it again or the potatoes will be taken away.
_x_D. Give her something else; a spoon or hot dish holder to drop.
____E. Take her food away from her.

Check the <u>reason</u> or <u>reasons</u> for choosing your answer.

____1. If she throws potatoes on the floor, it is because she has too many to eat.
____2. When children think they are bad for doing something, they seldom do it again.
_x_3. Small children learn new things by experimenting.
____4. She will know you really wanted her to mind if you spank her hands.
____5. Children can be kept from being naughty by giving them something to play with.
____6. The only way small children learn is by being told.
____7. If you didn't tell her she was naughty, she might keep right on dropping potatoes.
____8. She needs to learn that she should not play with her food.

Pub Date - Aug66 42p.

*HOME ECONOMICS EDUCATION; *STUDENT EVALUATION; GRADE 11; GRADE 12; TESTING; *TEST CONSTRUCTION; *ACHIEVEMENT TESTS; *CHILD DEVELOPMENT

Models for test items and evaluation devices are provided for adaptation by home economics teachers to meet the needs of specific eleventh and twelfth grade child development classes in the comprehensive high school. Evaluation materials were developed through research projects and trial use in Iowa schools by heterogeneous school groups. The materials are based on subject matter areas: developmental tasks, individual differences, and family relationships, values, interests, and roles. Included are (1) objectives to which the evaluation materials relate, (2) suggestions for introducing and interpreting the results of the tests, and (3) the problems, presented as capsulated experiences, illustrating generalizations which require the student to give not only the answer but also justification for the answer. Other evaluation materials for home economics areas, all using similar formats, are available as VT 005 747-VT 005 757 (ARM Summer 1969). (FP)

(address)

OBJECTIVES AND DEVELOPMENT AND USE OF TEST ITEMS

I. Objectives: These evaluation materials relate to the following objectives

1. To accept, enjoy, and be interested in children
2. To grasp the whole range of human development through experiences with a range of ages
3. To develop respect for children as persons
4. To understand himself, including the effects of his behavior on others.

II. Development of Test Items: The items in this packet are based on the above objectives and the generalizations given at the top of each page containing a test item. The solutions and reasons for the problems include misconceptions collected from Iowa high school pupils.

III. Selection of items to combine into a test: Choose the items which involve the generalizations on which you wish to determine where your pupils are at any stage of learning (pre-test, during unit, at the end of unit, or as a part of semester test).

IV. Provision of a setting and directions: Here are a few suggestions which might be used with child development tests. You can think of others.

HOW WELL DO YOU UNDERSTAND CHILDREN AND HOW WELL CAN YOU TAKE CARE OF THEM?

When you have been with children (your brothers, sisters, cousins, neices) you may often have been surprised at things they did or said and you wondered why they acted that way. Or you may have been responsible for a child and needed to know how to take care of him.

Several situations are described on the following pages which may be like ones you have wondered about. Read each one carefully and then check (x) beside the statement(s) which you believe answer the question best.

In order to force pupils to consider each solution and/or reason, do <u>not</u> indicate the number of statements they are to check.

V. Scoring the test: To obtain a score for each girl total <u>only</u> the correct solutions and/or reasons. (See key on mimeographed copy of each item). It is better <u>not</u> to make deductions for incorrect choices because some of the problems are of such a nature that certain of the reasons could conceivably be true under some circumstances. The key provides for determining only those which make use of the particular generalization(s) listed at the top of each page. Also research on these items indicates that deducting for guessing has little effect on the relative size of the scores unless a student checks an unreasonably large number of responses.

VI. Interpreting the results of the test: The results can be looked at several ways to determine how well your pupils can apply the generalizations involved in the test.

(1) The size of the scores in relation to the total possible score gives a general idea of the class as a whole. Individual scores indicate which pupils have achieved most and which need more experiences. A look at the responses of individual pupils, particularly those whose scores are low, will indicate places where special help is needed.

(2) If the test has been given before and also after the unit has been taught you can see the extent of progress, provided the particular problems have not been discussed in class.

(3) Tabulating the total number of pupils who selected each solution and reason gives you clues to needs for learning, whether the test is used as a pre-test or after some instruction. Noting the generalizations which they failed to apply and the misconceptions (incorrect responses), you have a basis for planning experiences. Below is an illustration of an item that was administered to 137 ninth-grade pupils.

When Doris, age 14, was taking care of her brother Billie, 2, he picked one of the decorations off the Christmas tree and threw it on the floow where it broke. He looked up at Doris and smiled.

What would you do if you were Doris?
Check the answer(s) you think best.

74 A. Explain to him that he must not take the decorations off the tree.
15 B. Keep him away from the tree
26 C. Put the decorations high enough on the tree so that he cannot reach them
12 D. Make him clean up the broken glass
9 E. Scold him
20 F. Spank his hands
18 G. Ignore him
X 41 H. Put less valuable decorations on the lower branches of the tree

Check the reason(s) for choosing your answer(s)

35 1. He will learn not to bother the tree again
15 2. He may cut himself
32 3. He is too small to understand why he can't do as he pleases
33 4. He will give up if no one is amused but himself
6 5. He'd be afraid to do it again
51 6. He needs to learn to understand right and wrong
X 30 7. It is natural for Billie to want to throw things
30 8. He needs to learn that it isn't a joke
30 9. If you act displeased, he'll understand better.

It is evident from the figures that a large number of the pupils need help in understanding small children since more than half of them would solve this problem by merely explaining (Solution A). A fairly large group would punish him (Solutions D, E, & F). Only 41 of the pupils applied the generalization (Solution H): We all learn by experimenting and, therefore, make mistakes.

Thirty pupils realized that it was natural to throw things. More than one-third expected a two-year old to learn right from wrong and an equal number believed that showing displeasure will help him understand.

USING IDEAS YOU HAVE LEARNED ABOUT CHILDREN

Think of one idea which you have learned about children. Then describe briefly a situation which will show that you have let it influence you in dealing with children. An example is given. Write yours in the spaces below the example.

Idea	Situation
Example: Approval is a good way to give satisfaction to a child.	Example: My brother, who is 2 years of age, said to me, "Look." Then he put a small bit of potato in his spoon and raised it to his mouth. I said, "That's a nice sized bite, Jimmy."

(Suggestions to Teachers)

USING IDEAS YOU HAVE LEARNED ABOUT CHILDREN

This device may help you to determine what generalizations your pupils have learned well enough to use and where they need help. It may also be useful to the pupils in self-evaluation. Either may be done during the unit or at the end.

When interpreting the pupils' responses see whether the summarizing statements they give correspond to the generalizations you have listed. Also whether their responses indicate misconceptions. These are examples given by pupils in a preliminary trial which indicate understanding of one generalization: The basic needs of security, new experience, response and recognition are recurring needs necessary for each level of development.

1. We should make a child feel important.

2. Affection is one way of showing a child he is wanted.

Statements from the preliminary trial which indicate need for more help on how to guide children are:

1. Bribery is a good way to make a child go to bed.

2. Scaring the child is all right, if not done too often.

If some of your pupils have no opportunity to be around small children, you might suggest that they observe and record how other persons applied or failed to apply summarizing statements in dealing with children.

ENJOYABLE EXPERIENCES I HAVE HAD WITH CHILDREN

Describe in the space below some enjoyable experiences you have had with children. Then explain <u>why</u> you enjoyed these experiences.

(Suggestions to Teachers)

ENJOYABLE EXPERIENCES I HAVE HAD WITH CHILDREN

You could use this type of device in encouraging pupils to analyze their experiences. It may be useful to you in determining whether they accept children.

When interpreting what they have written, statements such as the following indicate an acceptance of children:

1. "Like all children they get to be mischievous at times but it is interesting to help them solve their problems."

2. "I enjoyed showing her how to like water without being scared of it."

3. "My reason for liking this experience was to see how happy these children can be."

Statements such as these may indicate misunderstandings of how children grow and develop:

1. "The four-year old I take care of is a show off."

2. "Smaller children behave better than ten-year-olds."

3. "We had to laugh at the games the children played at the party because they played such dumb games."

You may wish to summarize all of the papers and discuss them with the class to emphasize the many ways of enjoying children and to clear up any misconceptions concerning development of children.

FROM MY NOTEBOOK

It is not only what we are able to write on paper that indicates what we have learned about the care of younger children or how well we understand the way they act. How we use the information when we care for them is the important thing.

One way to check yourself on whether you are able to put to practice what you have learned is to keep a record of what you do and then study it. To do this, write down in a loose-leaf notebook all the things which you do. Then look over carefully what you have written, thinking of each thing you did and deciding the reasons for what you did. Write these down in the spaces below and on the back side, if necessary. Two examples are given.

What I Did	Reasons for What I Did
Examples	
When I arrived to take care of two-year old Jimmie the first time, he cried as if he were afraid of me, so I talked to him and played with him.	Young children adjust slowly to new situations.
When we came home, I showed three-year old Phillip how to hang up his wraps.	Older sisters can help younger children take responsibility for their own things.

(Suggestions to Teachers)

FROM MY NOTEBOOK

You may wish to use this type of device by having pupils describe their experiences with children at the time that they occur, writing down in detail what happened and keeping these results in their notebook. Then at the end of the unit, they could analyze these reports to see if they had used what they had learned in class.

When you interpret their responses, you will want to see if the reasons they give are consistent with the generalizations you have listed. They may be stated differently even though basically they mean the same thing. You will also want to see what misconceptions the pupils have.

After reading their responses then you may wish to summarize the results and discuss them with the entire class to help them see what they have learned and to clear up misconceptions. You might need to have conferences with the pupils who need special help.

Index to Generalizations and Test Items for Use in Evaluating Learning in Child Development: 11 and/or 12 grade

A. Individuals differ in rate and pattern of growth. Test items XXX, XXXI, XXXII, XXXIII.

B. Each individual has an urge to grow up. Test items VI, XVIII.

C. There is a mature behavior at any stage of development: Test items IV, VII.
   1. At eight possessions are very important. Test item VIII.
   2. At three shared play is difficult and parallel play more common. Test item XXIII.

D. The basic needs of security, new experience, response, and recognition are recurring needs necessary for each level of development. Test items IX, XV, XXI. (See also Gen. M).

E. Children adjust slowly to new situations. Test items I, XIV, XXIV.

F. It takes time for children to learn. Test item II.

G. We all learn by experimenting and, therefore, often make mistakes. Test item XIX.

H. Exploring is a very important part of a young child's learning. Test items XXV, XXVI, XXVII, XXVIII, XXIX.

I. Individuals are different; no two individuals are alike. Test items X, XI, XXII.

J. The more accepting we are of the feelings of the child, the more cooperative he will be. Test item XVI.

K. Behavior is most likely to be changed if causes are worked on rather than symptoms. Test items XII, XIII, XVIII, XX.

L. Every human being needs affection, needs to feel adequate, and needs recognition as a worthy person from those he cares about. Test items III, V. (See also Gen. D)

M. Some of the things that happen to us when we are very young help to determine our concepts and attitudes later in life. Test item XVII.

Generalization E: Children adjust slowly to new situations.

I. Mary Alice, a seven-year-old, went with her father and mother to visit Carol, her sister, and Carol's husband Bob. When it was time to go home, Mary Alice said that she wanted to stay over night. Her mother and father said she could. Two hours after her bed time Mary Alice was still awake. She lay in bed a little longer and finally went to Carol and Bob's room and said "I can't sleep."

What reasons might explain why Mary Alice couldn't sleep?

Check the reason(s) which <u>best</u> explains Mary Alice's behavior.

__x*__ 1. The surrounds are unfamiliar to Mary Alice and it is difficult for her to go to sleep as usual
_____ 2. Mary Alice was homesick
_____ 3. Being in a strange place, Mary Alice is afraid to go to sleep
_____ 4. Mary Alice had gotten attention from Carol before she married and was jealous of Bob.

*x indicates best response for this generalization.

Generalization F: It takes time for children to learn.

II. Carolyn, who is just past three, has been given a new tricycle. She rode it under a tree that had low branches and got scratched. Then she tried to ride it into the dog's house and bumped her head. When she turned a corner too sharply, it tipped over.

Why do you think Carolyn is having so much trouble learning to ride her tricycle?

Check the reason(s) you think <u>best</u> explains Carolyn's difficulty.

_____ 1. She hasn't learned to look where she is going
_____ 2. She is trying to imitate some of the things she has seen others do
_____ 3. Carolyn is too young to have a tricycle
_____ 4. Carolyn is too young to judge distances
_x_ 5. The experience is new and it will take time for Carolyn to learn
_____ 6. She is slower to learn than most children her age.

Generalization L: Every human being needs affection, needs to feel adequate, and needs recognition as a worthy person from those he cares about.

III. Mr. D. works some distance from home. He is gone all day and doesn't arrive home in the evening until 6:30 or sometimes later. Mrs. D. usually puts their 11-month old son Kenny to bed before her husband gets home. Kenny often cries during dinner or during the evening but when Mrs. D. checks on him, he is usually dry and comfortable.

What might explain Kenny's crying?

Check the reason(s) which <u>best</u> explains why Kenny cries.

_____1. Maybe Mrs. D. gets cross with Kenny
_____2. He may have developed the habit of wanting his own way
_____3. Mrs. D. makes him stay in bed too much
_____4. He might be afraid in the dark
_____5. He is a "mama's baby" and wants all of her attention
__x__6. He feels left out when he hears them talking
_____7. He could be cutting teeth.

Generalization C: There is a mature behavior at any stage of development.

IV. Mrs. C. is tired of washing so many diapers and has decided to begin to toilet train her 10-month old Diane. Diane has not yet started talking. She does a good deal of creeping but hasn't yet pulled herself to a standing position. Mrs. C. has been putting Diane on the toilet seat at the times when she thinks she might need to urinate. Quite often, however, she fails to "catch" Diane in time and several times lately Diane has urinated just after being taken off the toilet seat.

What might explain Mrs. C's lack of success?

Check the reason(s) which <u>best</u> explains why Mrs. C. was not successful

_____1. Diane was not put on the toilet often enough
_____2. Diane couldn't talk and didn't understand what her mother was saying when she put her on the toilet seat
_____3. Mrs. C. needed to watch Diane more carefully for signs that she wanted to urinate.
__x__4. Diane was too young for toilet training
_____5. Diane may be slow to learn
_____6. Mrs. C. may not have let Diane stay on the stool long enough
_____7. Mrs. C. hasn't explained to Diane what is expected of her.

Generalization L: Every human being needs affection, needs to feel adequate, and needs recognition as a worthy person from those he cares about.

V. Mr. and Mrs. J. have moved to a new neighborhood. Before they moved, their 4-year-old son Dickie had played with the neighborhood children he grew up with. Now, after several weeks in the new home, he spends most of his time alone digging in the back yard, playing with his blocks or playing "Train."

Three other children in the neighborhood of his age play in the yard next door much of the time. When Dickie is outside, he spends part of his time watching them and a few times he has asked if he could come and play but they have told him, "No, we don't want you to."

Why do you think Mrs. J. is disturbed?

Check the reason(s) which <u>best</u> explains why Mrs. J. was disturbed?

_____1. She wonders if the parents in the neighborhood are forbidding their children to play with Dickie
_____2. She wonders if she did wrong by moving to this neighborhood
_____3. She thinks Dickie may become slow and backward
__x__4. She thinks Dickie will feel neglected and unwanted
_____5. She thinks Dickie should know how to make new friends and adjustments.

Generalization B: Each individual has an urge to grow up.

VI. Arthur, seventeen years old, and Harold, nine years old, live on a farm. Both boys help with farm work after school, on Saturdays and vacations. Arthur drives the tractor but their parents won't permit Harold to drive it. Whenever Arthur drives the tractor, Harold teases him continuously to let him drive.

What might explain why Harold is so anxious to drive the tractor?

Check the reason(s) which best explains why Harold wants to drive it.

_____1. Harold is jealous of Arthur
_____2. He thinks he can drive as well as Arthur
_____3. He wants to be as helpful as his brother
_____4. He feels that since he has to do other things on the farm, he should be allowed to drive the tractor
_____5. Boys that age are very interested in machines
_____6. He could tell his friends that he drives a tractor
_x_7. He wants to be considered as grown-up as Arthur
_____8. He wants to get his brother in trouble so his parents won't think Arthur is so mature
_____9. Harold feels that he is being rejected.

Generalization C: There is a mature behavior at any stage of development.

VII. Mr. & Mrs. G. are expecting another baby and have told their three-year-old Susan that she will have a new brother or sister. The other day as Susan was playing with a doll she asked her mother when she was going to have the baby sister. Mrs. G. explained that it would be soon. Susan then asked, "Where is the baby?" Her mother explained that the baby was growing in her body. Susan listened and then turned her attention again to the doll.

Why wasn't Susan interested in knowing more about the baby?

Check the reason(s) which <u>best</u> explains why Susan wasn't interested in knowing more.

____1. The doll attracted her attention.
____2. Susan is not the type of child who asks lots of questions.
_x_3. A child this age is not interested in anything very long.
____4. Susan did not understand what her mother told her.

Generalization C1: There is a mature behavior at any stage of development: At eight, possessions are very important.

VIII. Marie, 8, carried a little red purse with her when she went to visit Alice, 8, one afternoon. Alice was fascinated with the purse and began to hope Marie would forget it when she went home. Marie put the purse on the window sill and Alice thought Marie would be more sure of forgetting it if it were covered, so she put her handkerchief over it. When Marie's father came for her, she forgot the purse. As soon as she left, Alice picked up the purse and said to her older sister, "Oh, look what Marie left. It's mine now."

Why do you think Alice acted this way?

Check the reason(s) which <u>best</u> explains why Alice acted as she did.

_____1. She had never been taught that it is wrong to want what someone else has.
_____2. Children this age are inclined to be very selfish.
__x__3. At this age children like to own things.
_____4. Alice is too used to having everything she wants.
_____5. Most children this age are jealous of what other children have.
_____6. She liked the bright color.
_____7. She has not learned the law of ownership.

Generalization D: The basic needs of security, new experience, response and recognition are recurring needs necessary for each level of development.

IX. Janet Jones, who was staying with her seven-year old brother, Jimmy, realized that all the noise had subsided in the dining room where Jimmy was playing. She opened the door to investigate and saw Jimmy's friend, Johnny also seven, standing on the table. She said "Johnny, I know you don't stand on the dining table at home." He replied, "Yes, I do."

What reasons explain Johnny's reply?

Check the reason(s) which you think <u>best</u> explains Johnny's reply.

_____1. Johnny was afraid of being punished and saw this as a way out.
_____2. Johnny wanted attention
__x__3. Johnny didn't want to be shamed in front of his friend.
_____4. Johnny was acting smart.
_____5. Johnny thought that because he was away from home, he could do anything and they wouldn't say anything to him.

Generalization I: Individuals are different; no two individuals are alike.

X. Mr. and Mrs. S. have a 3½-month-old baby and a 2-year-old daughter, Brenda. They live in an isolated community and are unable to see the doctor often. When Mrs. S. took the baby to the doctor at 3 months, he suggested that the baby might be ready for a change from five to four feedings a day. Mrs. S. has been trying this but the baby cries about 2½ hours after the feedings as though she were hungry. Mrs. S. does all she can to make the baby comfortable. Mr. and Mrs. S. are wondering what they should do. They remember that Brenda was taking only four feedings at 3 months.

What do you think Mr. and Mrs. S. should do?

Check the answer(s) you think <u>best</u>.

____ A. Keep the baby on four feedings a day.
____ B. Let the baby cry.
_x_ C. Feed the baby when she is hungry.
_x_ D. Go back to 5 feedings a day

Check the reason(s) for choosing your answer(s)

____ 1. Doctors usually give sound advice.
_x_ 2. Not all children do things the same way and at the same time.
____ 3. If they give her more food, it may make her sick.
____ 4. Babies should not be spoiled
_x_ 5. Some children need to be fed more often than others.

Generalization I: Individuals are different: no two individuals are alike.

XI. Mr. B. was active in athletics in high school and would like to have his two sons, Jerry (age 4) and Tim (age 6) acquire some athletic skills. Tim learned to throw a baseball and to climb very skillfully by the time he was 4 years old but Jerry isn't doing as well. Jerry sometimes plays ball with his father and Tim but most of the time he prefers to look at books, listen to stories, and build with blocks.

What suggestions would you give Mr. B?

Check the answer(s) you think is <u>best.</u>

_____A. Let athletics rest for a year and then try to interest Jerry again.
_____B. Encourage Jerry to play ball.
_____C. Promise him he can do something he likes if he plays ball.
_____D. Make Jerry play ball.
__x__E. Help Jerry develop the interests he has.

Check the reason(s) for choosing your answer(s).

_____1. Children learn to like sports after they play them awhile.
_____2. Jerry would play much better if he were older.
__x__3. Children are not all alike.
_____4. Books will be more important to Jerry later in life.
_____5. Jerry needs to develop an interest in sports.
_____6. An interest in sports is very important for boys.

Generalization K: Behavior is more likely to be changed if causes are worked on rather than symptoms.

XII. Beth, sixteen years of age, stays with the Coxes while going to high school and earns board and room by helping with housework and taking care of children. Since Christmas four-year-old Douglas has been awakening her two hours before the family gets up to wind his airplane, a Christmas gift. This disturbs her.

What would you do, if you were Beth?

Check the answer(s) which you think best.

_____A. Tell him to go back to bed.
_____B. Talk to his parents and ask them to make Douglas stay in bed until everyone else is up.
_____C. Explain to Douglas that he shouldn't disturb her.
_____D. Ignore him.
__x__E. Put another toy in his bed for him to play with when he wakes up early.
_____F. Tell him he must stop waking her up.

Check the reason(s) for choosing your answer(s).

_____1. He will soon give up and go back to bed.
__x__2. Douglas' attention would be diverted from the airplane.
_____3. Beth needs her sleep.
_____4. He is old enough to learn that he can't have everything done when he wants it.
_____5. He needs to realize that there is always another time to play with his airplane.
_____6. Douglas should have more sleep.

Generalization K: Behavior is more likely to be changed if causes are worked on rather than symptoms.

XIII. Phyllis, 16, and her brother, Bobbie, 5, were spending a weekend with their sister, Marie, who is expecting a baby. During dinner Phyllis refused dessert and said, "I'm watching my waistline and that dessert contains so many calories." Bobbie replied, "Why should you watch your waistline when Marie doesn't?"

What should Phyllis have said or done?

Check the answer(s) you think best.

__x__ A. Tell him why Marie's waistline is large.
____ B. Ignore him.
____ C. Tell him he is too young to understand.
____ D. Tell an older person to explain to Bobbie in private.
____ E. Explain to Bobbie that remarks like those are embarrassing to Marie.

Check the reason(s) for choosing your answer(s).

____ 1. Bobbie needs to learn to be careful about what he says.
____ 2. If you reply to Bobbie's statement you make an issue of it.
____ 3. It would be less embarrassing to everyone.
__x__ 4. Pregnancy should be accepted as natural.
____ 5. Because Phyllis is only 16, Bobbie may resent anything she says or does.
____ 6. Pregnancy should not be talked about in front of small children.

Generalization E: Children adjust slowly to new situations.

XIV. Mr. and Mrs. Hawthorne and Clara, four-years old, were taking a walk on a late Sunday afternoon. On their way home they walked by the home of a friend, a rather elderly woman, and Mrs. Hawthorne suggested that they stop to visit for a little while. As they started to turn in the walk, Clara set up a terrific howl, refused to go in, and shouted, "I want to go home."

What should Mr. and Mrs. Hawthorne have done to prevent Clara acting this way?

Check the answer(s) you think is <u>best</u>.

_____A. Tell Clara that they would give her something for being nice.
__x__B. Explain ahead of time that they were stopping.
_____C. Let Clara visit people often.
_____D. Let Clara know that she must mind.
_____E. Tell Clara how nice the lady is.

Check the reason(s) for choosing your answer(s).

_____1. Clara will learn that if she is good everyone will like her.
_____2. Children can understand a lot if you just reason with them.
_____3. She will learn to respect older people.
_____4. She needs to learn that she can't do just as she wants to.
__x__5. It takes time for Clara to adjust to the idea of stopping.

Generalization D: The basic needs of security, new experience, response and recognition are recurring needs necessary for each level of development.

XV. Mr. and Mrs. H. have a 2-month-old baby, Janet, and a 3-year-old son, Ray. Ray was told about the baby before it was born. Mr. and Mrs. H. have tried to prevent any jealousy by letting Ray help care for the baby and by telling him what a nice baby Janet is. The other evening Mr. H. was in the yard and Ray was playing with Charles, a 2-year-old who lives next door. The boys had a small stuffed doll. Ray said, "This can be a baby and I'll spank it and cut off its ears and push its eyes in."

If Ray were your son, what would you do when you heard him talking about the baby doll?

Check the answer(s) you think best.

_____A. Ask Ray if he'd like to be treated as he wanted to treat the doll.
_____B. Ignore him.
_____C. Explain to him how to treat dolls.
__x__D. Show Ray more love and affection.
_____E. Compare the doll to Ray's baby sister.

Check the reason(s) you choose this answer(s).

_____1. Most three-year-olds don't realize what they are saying.
__x__2. Ray needs to know that you love him as much as you do the baby.
_____3. Ray is old enough to learn to care for his toys.
_____4. Ray must be made to see a likeness between Janet and the stuffed doll.
_____5. Ray needs to stop and think just how it would feel if someone did this to him.

Generalization J: The more accepting we are of the feelings of the child, the more cooperative he will be.

XVI. Ten-year-old Dwight received a one dollar bill for Christmas. This was the amount necessary to buy a pair of guards for his skates. He found a picture of them in the catalogue and insisted that his older brother, Jack, who is 17 years old, drive his father's car a mile and half into town to send a mail order for them. Jack said he thought it was silly and he would not go. Dwight begged but Jack still refused and finally told him, "Just leave me alone."

Do you agree with the way Jack handled this after he told Dwight the letter could not be mailed that night?

Check the answer you think best.

____A. Yes
_x_B. No

Check the reason(s) you chose this answer.

____1. Dwight should learn that he can't get his way all the time.
____2. Children Dwight's age get excited over small things so Jack needed to calm him down.
____3. If Dwight thought he could get his way by merely begging he would do it all the time.
_x_4. If Jack tried to understand how Dwight felt, Dwight might be more cooperative.
____5. At ten-years-old, boys think they are grown and they need to be put in their place.
____6. Dwight may dislike Jack.

Generalization M: Some of the things that happen to us when we are very young help to determine our concepts and attitudes later in life.

XVII. Mrs. Sims had three children: Warren 12, Eileen 9, and Eugene 2 years old. She had a school girl, Ann, who is 17 staying in the house and working for board and room. After Ann left, Mrs. Sims discovered that she had been telling the children there were signs on the wall that God was coming and that, if they didn't behave, they would go to "Hell."

Should Mrs. Sims be disturbed about this situation?

Check the answer you think best.

__x__ A. Yes
____ B. No

Check the reason(s) for choosing your answer.

____ 1. The children might become confused.
____ 2. The children may be frightened away from religion.
____ 3. The children would forget about it in a little while.
__x__ 4. The children may carry this fear with them for a long time.

Generalization B: Each individual has an urge to grow up.

Generalization K: Behavior is most likely to be changed if causes are worked on rather than symptoms.

XVIII. Four-year old Janet is having difficulty going to sleep in the afternoons. Her mother has been used to putting her to bed, tucking her in, and leaving her by herself to go to sleep. Now she is wondering what she should do. For three days Janet hasn't had a nap. She is very irritable when her father comes home and doesn't want to go to bed at night either.

What do you think Janet's mother should do?

Check the answer(s) you think <u>best</u>.

__x__ A. Tell Janet if she wants to stay up to have fun with her dad, she needs a nap.
_____ B. Leave Janet in bed until she goes to sleep.
_____ C. Promise her a surprise if she takes a nap.
_____ D. Deny her some privilege she now has when she fails to take her nap.
_____ E. Make sure she is tired before her nap time.
_____ F. Tell her you will be unhappy if she doesn't go to sleep.
__x__ G. Read her a story.

Check the reason(s) you chose your answer(s).

_____ 1. Janet needs to learn to mind.
_____ 2. Children don't like to hurt their parent's feelings.
_____ 3. Three-year-olds like surprises.
__x__ 4. Children like an explanation because it makes them feel more grown-up.
_____ 5. Fatigue helps a child to relax.
__x__ 6. She needs help in relaxing.

Generalization G: We all learn by experimenting, and therefore often make mistakes.

XIX. Ronald and Susie, eight and five years old respectively, were helping their sixteen-year-old brother, Jim, rake leaves in the back yard, so they could be burned later. While Jim was answering the telephone, the children lighted a match to the leaves and the fire spread quickly over the entire yard, burning the seesaw beyond repair. The neighbors helped put out the fire before more serious damage was done.

What action should be taken with the children?

Check the answer(s) you think best.

_____A. Punish them.
_____B. Make them apologize for the damage and trouble they caused.
_____C. Tell them never to play with fire.
_____D. Make them clean up the mess.
___x___E. Talk over the situation and tell them the dangers of fire.

Check the reason(s) for choosing your answer(s).

_____1. They need to realize what damage they have done.
_____2. They need to learn to be more responsible.
___x___3. They probably have been frightened enough by the incident.
_____4. Punishment helps children this age remember not to repeat their action.
_____5. They must learn right from wrong.
___x___6. They are quite young and didn't understand what would happen.
_____7. They need to realize how much worry they have caused everyone.

Generalization K: Behavior is more likely to be changed if causes are worked on rather than symptoms.

XX. Ellen, a 2½-year-old, is hard to get into bed. The family eats supper at 6:00. She usually naps from 1 to 2:30 and starts to get ready for bed at 7:30 on the dot. Her mother warns her at 7:20 that it is almost time to get ready. Even after a ten-minute warning she doesn't want to stop and her mother often picks her up from her play. After Mrs. Paris gets Ellen into bed, she calls for a drink and wants to go to the toilet.

Which of these things would improve this bedtime procedure?

Check the answer(s) you think <u>best</u>.

____ A. Let her stay up longer.
_x_ B. Read her a story or sing her a song at bedtime.
____ C. Punish her by sending her to bed earlier.
____ D. Take care of all her needs before bedtime.
____ E. Warn her earlier.

Check on the Answer Sheet the reason(s) for choosing your answer(s).

_x_ 1. Children 2½ years old are very active.
____ 2. Ellen wants attention.
____ 3. She will have no excuse for calling out after she is in bed.
____ 4. If she gets very tired, she will go to bed and they won't have any trouble.
____ 5. The change is too abrupt and a longer warning would give her adequate time.
_x_ 6. Ellen needs help in relaxing.
____ 7. She will learn to appreciate being able to stay up until 7:30.

Generalization D: The basic needs of security, new experience, response and recognition are recurring needs necessary for each level of development.

XXI. When Mr. S. goes by the play ground for Mary, 3, he has trouble getting her to go home. She always wants to go down the slide, "just once more", and then "just once more", again and again. Mr. S. has found that one of the quickest ways to get Mary to come when he wants her is to say, "Goodby, Mary", and start to walk away. Or, sometimes he says, "I can't wait any longer. I'm going to leave you here."

Do you think Mr. S. is using a good method of getting Mary to leave the playground?

Check the answer you think best.

____ A. Yes
_x_ B. No.

Check the reason(s) for choosing your answer.

____ 1. Mary should be taught to mind.
____ 2. This will give her a scare and teach her he meant what he said.
____ 3. Three-year-olds don't like to be left behind.
_x_ 4. Mary may think her father will go away and leave her.
____ 5. She is having too much fun to want to come immediately.
____ 6. He should have more patience with her.
____ 7. She will be more willing to cooperate.

Generalization F: Individuals are different; no two individuals are alike.

XXII. You are visiting two neighbors who each have a four-year-old interested in trains. One is a boy and one is a girl. Recently when on a shopping tour each mother bought an attractive take-apart train for their child. The girl's mother said she enjoys her train and spends twenty minutes at a time taking it apart and putting it back together. The mother of the boy said of her son, "He takes it apart all right and tries a few seconds to put it together, but later I find pieces all over the house."

This mother says to you, "What should I do?"

Check the answer(s) you think is <u>best</u>.

_____A. Help him put the train together.
_____B. Let the little girl play with him and show him how to put the train together.
_____C. Read him stories about trains, and let him watch trains at the depot.
__x__D. Put the train away until he is older.

Check the reason(s) you chose your answer(s).

_____1. Some children learn with more difficulty than others.
_____2. Girls are more advanced than boys.
_____3. He needs help to develop an interest in trains.
__x__4. No two children are alike.
_____5. Boys tire of their things a lot easier than girls.

Generalization C2: At three, shared play is difficult and parallel play more common. There is a mature behavior at any stage of development.

XXIII. Mr. and Mrs. J. live in a neighborhood in which there are only a few children and most of them are 8 years or older so their 3-year-old Mike has played alone most of the time. The other day, Mrs. J. took Mike to a birthday party. The 4 children at the party played in the sand pile. Mike wanted all the sand toys. When 2-year-old Tony reached for a spoon Mike screamed, "No! No!".

If you were Mrs. J., what would you have done?

Check the answer(s) you think <u>best</u>.

_____A. Make Mike give Tony the spoon.
_____B. Explain to Mike that he can't have all the toys.
__x__C. Get another spoon for Mike.
_____D. Take Mike home.
_____E. Tell Mike that unless he shares his toy they'll both have to stop playing.

Check the reason(s) for choosing your answer(s).

__x__1. At 3, it is difficult for children to share.
_____2. Mike needs to learn not to be selfish.
_____3. A three-year-old is able to understand that he can't have his way all the time.
_____4. No one likes a selfish person.
_____5. Children understand threats.

Generalization E: Children adjust slowly to new situations.

XXIV. Donna, five years old, has been told by her parents that her dog has been run over by a truck. However, she continues to look in the dog house when she plays in the back yard.

If you were her older sister or brother, what would you do?

Check the answer(s) which you think best.

_____A. Explain to her that the little dog would never come back.
_____B. Explain the meaning of death.
_____C. Tell her the dog went to heaven.
__x__D. Do nothing.
_____E. Remove the doghouse.

Check the reason(s) for choosing your answer(s).

_____1. She will stop looking for the dog.
_____2. It will help her to understand.
__x__3. She'll forget about the dog in a few weeks.
_____4. She will understand death for later in life.
_____5. She will learn that everything must die.
_____6. This would impress upon her that the dog is gone for good.

Generalization H. Exploring is a very important part of a young child's learning.

XXV. Mr. W. enjoys working in the small shop he has built in his basement, and he decided to get some tools for his three-year-old, Billy. When Mr. W. gave Billy a new hammer, Billy experimented with it on an old box in the basement, sometimes using the wrong end of the hammer to pound with, and examing the dents he made in the box. A few days later, Billy began pounding some big nails into a block of thick wood. Mr. W. felt that Billy should be making something, so he got out boards of different sizes and nails and suggested that Billy begin by nailing two boards together. Billy picked up the biggest nail in sight and started pounding it into the thin boards.

If you were Mr. W., what would you do when Billy started to use a nail that was too big? Check one.

____1. Show him how to find the right sized nail.
____2. Give him a smaller nail and explain why it would work better.
__x__3. Let him use the big nail.
____4. Make a box or something for him and use smaller nails.
____5. Explain what the big nail would do, then let him go ahead and use it if he wishes.
____6. Show him the right size of nail for each sized board.

Check the <u>reason</u> or <u>reasons</u> which best explains your answer.

____a. A child learns by being shown the right way to do things.
__x__b. Children learn more effectively if they are allowed to try things and see what happens.
____c. If Billy used the large nail, he might be discouraged if the board broke.
____d. Children learn by imitating adults.
____e. A child needs to be taught how to do wood work.
____f. If Bill's father made something for him, Billy might become more interested in making things.

Generalization H: Exploring is a very important part of a young child's learning.

XXVI. The other day when Mrs. H. was getting ready to bathe her ten-month-old son, Craig, she put him on the bed to play while she got the bath water ready. Craig played with his hands for a while, took hold of his feet and played with them, and then began handling his genitals.

Check the statement which best explains what you would do with Craig if you were Mrs. H.

_____1. Remove his hands.
_____2. Give him something else to play with.
__x__3. Ignore it.
_____4. Put on his diaper.
_____5. Slap his hands.

Check the <u>reason</u> or <u>reasons</u> which best explains your answer.

_____a. It is natural for children to handle their genitals, but they should not be given the opportunity to do so.
_____b. Distracting a child's attention with toys is better than punishment, because punishment would only make him more curious.
_____c. All children go through that stage.
__x__d. Children learn about themselves by exploring their bodies.
_____e. Craig needs to learn that this is wrong.

Generalization H: Exploring is a very important part of a young child's learning.

XXVII. Three year-old Bobby has a new tricycle. The other day when his father was in the yard with him, Bobby rode around the yard and then rode under some low branches which scratched his face. Bobby cried for a minute, then climbed on his tricycle again and started to drive it through a part of the lawn that was very muddy.

Which of these things would you do if Bobby was your son? Check one.

____1. Suggest that he ride on the parts of the lawn that are dry and away from the trees.
____2. Tell him the tricycle is to use only on the sidewalk.
__x__3. Let Bobby find out what will happen in the mud.
____4. Show him how to avoid low branches and muddy spots.
____5. Pay no attention to him.

Check the <u>reason</u> or <u>reasons</u> which best explains your answer.

____a. Bobby needs to be told how to use a tricycle.
____b. Bobby is probably just trying to get attention.
____c. Children need to learn to take care of themselves.
__x__d. Children learn more if they are allowed to find out things on their own and make their own mistakes.
____e. Bobby needs help in avoiding unpleasant situations with the new trike.

Generalization H: Exploring is a very important part of a young child's learning.

XXVIII. Three-year-old Linda Thomas has no brothers and sisters. Mrs. Thomas' sister and her two sons, Allen (two-years-old) and Johnny (five-years-old) have been visiting the Thomas'. Linda has started following Allen and Johnny into the bathroom each time they go in and watching them at the toilet.

If you were Mr. or Mrs. T., which of these things would you do? Check one.

__x__ 1. Let her watch and answer any questions she asks.
_____ 2. Get her away from the bathroom by interesting her in something else.
_____ 3. Explain that boys and girls should go to the bathroom separately.
_____ 4. Explain the differences in the bodies of boys and girls.

Check the reason or reasons which best explains your answer.

__x__ a. Linda is just curious.
_____ b. Diverting her attention is better than forbidding her to watch because that might make her feel that there was something wrong in doing so.
__x__ c. Learning the differences in the bodies of boys and girls is a part of early sex education.
_____ d. Children need to learn that the bathroom is private.
_____ e. Quiet action or explanation can prevent too much curiousity without giving the child the impression that watching is wrong.

Generalization H: Exploring is a very important part of a young child's learning.

XXIX. Mr. and Mrs. T. have a two-year-old son, David. The other day, they visited Mr. and Mrs. L., who have a two-and-a-half-year-old daughter, Judy. David showed little interest in playing with Judy. Most of the time he played alone with some wooden beads, but once he went over to Judy, who was playing with a doll near him, and pushed her and she squealed. David watched her for a few minutes, then went back to his beads. Just as the T.'s. were leaving, David walked up to Judy and hugged her very hard.

If David were your son, which of these things would you do? Check one.

____1. Show him how to pat Judy to show her he liked her.
____2. Separate the two children.
____3. Explain that he should not push or hug Judy so hard.
____4. Give him chances at home to practice greeting other people (saying, "Hello", etc.)
____5. Explain that Judy doesn't like to be pushed or hugged so hard.
_x_6. Let David continue to approach Judy in his own way, as long as neither of the children is hurt.

Check the reason or reasons which explains your answer.

_x_a. Two-year-olds have not yet learned to approach other children.
_x_b. Children need to experiment to find ways of approaching others.
____c. Children need help in learning the right way to do things.
____d. Two-year-olds can understand explanations.
____e. David should be corrected or punished so that he will know that pushing is wrong.

*HOME ECONOMICS EDUCATION; *STUDENT EVALUATION; GRADE 9; TESTING; *TEST CONSTRUCTION; *ACHIEVEMENT TESTS; *FAMILY RELATIONSHIP

Models for test items and evaluation devices are provided for adaptation by home economics teachers to meet the needs of specific ninth grade family relations classes in the comprehensive high school. Evaluation materials were developed through research projects and trial use in Iowa schools by heterogeneous school groups. The materials are based on the subject matter areas: developmental tasks, individual differences, and family relationships, values, interests, and roles. Included are: (1) objectives to which the evaluation materials relate, (2) suggestions for introducing and interpreting the results of the tests, and (3) the problems, presented as capsulated experiences, illustrating generalizations which require the student to give not only the answer but also justification for the answer. Other evaluation materials for home economics areas, all using similar formats, are available as VT 005 747-VT 005 757 (ARM Summer 1969). (FP)

INDEX TO GENERALIZATIONS AND TEST ITEMS FOR USE IN EVALUATING LEARNING IN FAMILY RELATIONS: 9TH GRADE

A. Consideration of others is the basis of good manners wherever you are. Test Item VII

B. Decisions are more apt to be strongly supported when they are arrived at through the participation of group members to the extent their maturity allows. Test Item IV

C. Planning saves irritation. Test Items VIII, XVI

D. Tasks are usually more effectively accomplished with satisfaction to all if each person contributes to the extent of his ability to make plans, accepts responsibility for carrying out these plans, and develops skills necessary to do his job. Test Items IX, XV

E. Each individual can make a contribution to the activities of the group. Test Item III

F. The more varied our interest, the more opportunities we have for making friends. Test Item XIII

G. The friends we have may serve different needs. Test Item X

H. There is no set age when all are ready to date. Test Item XIV

I. The more a person maintains an open mind until he has all the facts needed for a decision, the more he is likely to be fair to everyone involved in the decision. Test Item V

J. The people with whom we work and play prefer us to "let off steam" in socially accepted ways and in appropriate places. Test Item XVII

K. The social group of which you are a part, influences not only what you do, but also your ideas. Test Item I

L. Girls in most cases mature earlier than boys. Test Item XVIII

M. Dating customs vary from community to community. Test Item XII

N. Accepting the fact that parents are not always right is part of growing up. Test Item VI

O. When family members are able to talk over with each other things which irritate them, their family life is apt to be more happy. Test Item XI

P. When equipment is to be shared in the home, what one person requires influences what others can use and do. Test Item II

OBJECTIVES AND DEVELOPMENT AND USE OF TEST ITEMS

I. Objectives: These evaluation materials relate to the following objectives

1. To recognize sequence and variations within normal adolescent development.
2. To understand and accept individual differences in people.
3. To recognize their own motives and develop a sense of values that will aid growth toward maturity.
4. To acquire sensitivity to the problems of themselves and other people.
5. To recognize that families are different and expect each of their families to do some things differently than other families do them.
6. To contribute to the growth of others.
7. To recognize the satisfactions from relationships with siblings.
8. To recognize reasons why people have different interests and points of view.
9. To determine and fulfill one's role in the family.

II. Development of Test Items: The items in this packet are based on the above objectives and the generalizations given at the top of the page containing a test item. The solutions and reasons for the problems include misconceptions collected from Iowa pupils.

III. Selection of items to combine into a test: Choose the items which involve the generalizations on which you wish to determine where your pupils are at any stage of learning (pre-test, during unit, at the end of unit, or as a part of semester test).

IV. Provision of a setting and directions: Here are a few suggestions which might be used with family relations tests.

Getting Along

Do you ever say to yourself Why did he do that? Why did she say that? What would I do if I were in that situation?

We all want to get along successfully with other people (children, friends, teachers, parents, etc.). As we know what makes others act and feel as they do, we are better able to get along with them.

Several situations are described in the following pages. After studying each carefully, check (x) the answer (s) you think <u>best</u> and the reason (s) <u>why</u> you have selected the answer (s).

In order to force pupils to consider each solution and/or reason, do <u>not</u> indicate the number of statements they are to check.

V. Scoring the test: To obtain a score for each girl check and total <u>only</u> the correct solutions and/or reasons. (See key on mimeographed copy of each item). It is better <u>not</u> to make deductions for incorrect choices because some of the problems are of such a nature that some of the reasons could conceivably be true under certain circumstances. The key provides for determining only those which make use of the particular generalization (s) listed at the top of each page. Also research on these items indicates that deducting for guessing has little effect on the relative size of the scores unless a student checks an unreasonably large number of responses.

VI. Interpreting the results of the test: The results can be looked at several ways to determine how well your pupils can apply the generalizations involved in the test.

(1) The size of the scores in relation to the total possible score gives a general idea of the class as a whole. Individual scores indicate which pupils have achieved most and which need more experiences. A look at the responses of individual pupils, particularly those whose scores are low, will indicate places where special help is needed.

(2) If the test has been given before and also after the unit has been taught you can see the extent of progress, provided the particular problems have not been discussed in class.

(3) Tabulating the total number of pupils who selected each solution and reason gives you clues to needs for learning, whether the test is used as a pre-test or after some instruction. Noting the generalizations which they failed to apply and the misconceptions (incorrect responses), you have a basis for planning experiences. Below is an illustration of an item administered to 119 tenth-grade pupils.

Mabel, 15, and Hazel, 16, are sisters and both are in the tenth grade. They are friends of Elsie, who is a very popular member of their class. Usually the three girls go to the movies on Wednesday afternoons after school, but yesterday Mabel and Elsie dodged Hazel and went to the movie. Hazel has refused to talk to Mabel since the incident and their mother is alarmed. Although the girls have argued, they have never before stopped speaking to each other.

Do you think there is reason for alarm on the part of the mother?
Check (x) the answer you think <u>better</u>.

45 A. Yes
X 74 B. No

Check (x) reason or reasons for choosing your answer.
33 1. The problem should be solved before it gets worse.
X 62 2. Sisters frequently have disagreements because they are together so often.
15 3. Hazel needs help to overcome her jealousy.
24 4. The whole family will be affected by their actions, if they are allowed to continue.
45 5. Jealousy is a trait of teenage girls which they overcome as they become older.
6 6. The sisters are stubborn.

Although almost two-thirds of these pupils checked the correct solution (B), fewer were able to apply the generalization when they selected a reason (2): Some conflict is normal in any close relationship. Many see it as a serious problem (1) or attribute it to jealousy (3 and 5). More than half need help in understanding the generalization.

Generalization K: The social group of which you are a part influences not only what you do, but also your ideas.

I. Rita and all her friends in the ninth grade wore skirts and sweaters to school. Rita's mother liked to sew and decided to surprise Rita with a dress for her birthday. The dress was of Swedish design and very pretty. Although her mother had spent many hours making the dress, Rita refused to wear it.

What might explain why Rita didn't wear the dress?

Check with an x the reason or reasons you think best explain Rita's refusal.

____ 1. She wanted to wear only the latest styles.
____ 2. She didn't like homemade clothes.
x* 3. Rita didn't want to dress any differently than the other girls.
____ 4. Rita thought dresses were childish.
____ 5. She didn't like the style, color, and other details of the dress.

*x indicates best response for this generalization

Generalization P: When equipment is to be shared in the home, what one person requires influences what others can use or do.

II. Mrs. Barnes told Ada, 14, that others in the family were complaining because of the amount of time she used in the bathroom. Ada said, "I want to look like the other girls when I go places."

Should Ada try to shorten the time she spends in the bathroom?

Check with an x the answer you think <u>better</u>.

____ A. No
_x_ B. Yes

Check with an x the reason or reasons for choosing your answer.

____ 1. Ada is at the age that she needs to learn good grooming.
_x_ 2. Ada should consider the rights of other family members.
____ 3. She needs to learn she can't do as she wishes all the time.
____ 4. Everyone in a family should be treated alike.
____ 5. It is very important for girls this age to be as well groomed as their friends.

Generalization E: Each individual can make a contribution to the activities of the group.

III. Mrs. Nelson is working part-time to help with expenses while Mr. Nelson is in the hospital. This means that the children need to help with some of the work that she usually does around the house. The family immediately decided on jobs for Alice, 10, and Wilbur, 14, but did not decide on a job that four-year-old Jack could help do in the home.

Do you think that Jack should have a job?

_x_ A. Yes
____ B. No

Check with an x the reason or reasons for choosing your answer.

____ 1. Jack will learn that no one gets by without doing a little work.
____ 2. It would help keep him out of mischief.
____ 3. He is too small to do anything that would really help.
____ 4. The other children might feel that their mother was unfair.
____ 5. He needs to spend his time playing so he will develop as he should.
_x_ 6. He would be doing his part even if it is small.

Generalization B: Decisions are more apt to be strongly supported when they are arrived at through the participation of group members to the extent that their maturity allows.

IV. Mildred (age 10), Marlys (age 8), and Alice (age 6), help their mother with Saturday housecleaning. Mrs. Johnson has been telling each of them which tasks to do. Recently she asked them to decide how to divide the tasks.

Who do you think should make the decision of how to divide the tasks?

Check with an x the answer or answers you think best.

____ A. The mother
____ B. Mildred
__x__ C. The three children

Check with an x the reason or reasons which explain your answer or answers.

____ 1. They can each do the jobs they like best.
____ 2. Alice and Marlys are too young to decide such things.
__x__ 3. They will be more willing to do their jobs.
____ 4. The jobs are more apt to be well distributed.

Generalization I: The more a person maintains an open mind until he has all the facts needed, the more he is likely to be fair to everyone involved in the decision.

V. Edward was chairman of the decoration committee for the freshman spring party. When the other members of the committee started to decorate, Edward had not shown up. Oscar said, "I think Edward must be so busy working to get money to buy his date a corsage, he can't do his duty here." Irene said she thought that Oscar should wait to see what had really happened before deciding that Edward was not willing to do his share.

Do you agree with Irene?

_x_ A. Yes
____ B. No

Check with an x the reason or reasons for choosing your answer.

____ 1. Edward agreed to be chairman and he should be there.
____ 2. Oscar could cause hard feelings by his remark.
____ 3. Edward should have notified them if he couldn't be there.
_x_ 4. Edward could be unfairly judged, if he didn't have a chance to explain.

Generalization N: Accepting the fact that parents are not always right is part of growing up.

VI. While making an Algebra assignment, the instructor said that there were several problems which were extremely difficult that he wanted the students to attempt to work. He told them they could get outside help if they liked, and anyone who had them worked correctly by next class period would receive extra points. The next morning Clyde, 14, bragged to all his classmates, "I know my problems are right because Dad helped me with them." In class, Clyde found that several were wrong. That afternoon he stormed into the house and asked his father how he could have been so wrong. Clyde's father said, "I am sorry about the mistakes, but no one is always right." Clyde replied, "But you've never made a mistake before." All evening Clyde worried about the mistake his father made.

Should Clyde have been so much upset about his father's making a mistake?

Check with an x the answer you think <u>better</u>.

_x_ A. No
____ B. Yes

Check with an x the reason or reasons for choosing your answer

____ 1. He may hurt his father by worrying so much about missing the problem.
____ 2. He must learn to accept disappointment.
_x_ 3. He needs to begin to realize that his father isn't perfect.
____ 4. Clyde's father had made him think he was good.
____ 5. The other children would think Clyde's father couldn't work Algebra.

Generalization A: Consideration of others is the basis of good manners wherever you are.

VII. Patty brought several of her friends home after a basketball game for snacks. Her parents were out, but they raided the ice box anyway. The next morning her mother started to prepare breakfast and found the kitchen in a "mess." When Patty came down her mother said, "You can't bring your pals home for a snack unless you clean up the kitchen when you finish."

Was her mother's request reasonable?

____ A. No
_x_ B. Yes

Check with an x the reason or reasons for choosing your answer.

____ 1. Patty is younger and more able than her mother to clean up the kitchen.
____ 2. Patty is only young once so she should have a good time while she can.
____ 3. Patty should have more respect for her mother.
____ 4. Patty's friends will think less of her if she leaves "messes" for her mother to clean up.
____ 5. Patty needs to learn that you usually have to work to get something you want.
____ 6. Patty's mother should not expect her to clean up every time she uses the kitchen.
_x_ 7. Patty should be more thoughtful of others.

Generalization C: Planning saves irritation.

VIII. Elizabeth, age 14, wanted a new outfit to wear to her sister's graduation. The family, after budgeting the income for the month, found that Elizabeth could have $20. She immediately went down town and bought a dress for $18.95. Upon returning home she found that she had no accessories to match the dress. Elizabeth was disgusted with herself. She did not want to return the dress, so she had to choose between an old outfit or her new dress and odd accessories.

What could Elizabeth have done to avoid this difficulty?

Check with an x the answer or answers you think <u>best</u>.

____ A. Shopped around more before buying the dress
____ B. Asked her mother to help decide on the dress
__x__ C. Planned how she would spend her money before she went down town
____ D. Purchased material and made her dress

Check with an x the reason or reasons which explain your answer or answers.

__x__ 1. If she had first decided what she needed, she might have been less irritated with the results.
____ 2. That is more money than she needed to spend for a dress.
____ 3. She is too young to be spending that much money alone.
____ 4. Often you can get more for your money if you look several places before making a definite decision.
____ 5. Ready-made clothes usually cost more than material.

Generalization D: Tasks are usually more effectively accomplished with satisfaction to all, if each person accepts responsibility for carrying out the plans.

IX. Mr. and Mrs. Simmons, Carl, 18, and Evelyn, 12, have planned a three-week vacation trip. There are many jobs to be done at home before the Simmons can leave. They are dividing the tasks and making each person responsible for doing the tasks assigned him.

Why is this a good plan?

Check with an x the reason or reasons why you think this plan is good.

_____1. Much more work can be accomplished in less time.
_____2. The jobs will all get done if everyone does his part.
_____3. The parents won't have to carry all of the burden.
_____4. There will be less confusion.
_____5. The children can learn to take responsibility from the experience.
__x__6. Everyone will feel that he had a part in making the trip possible.

Generalization G: The friends we have may serve different needs.

X. Marie asked her father to take her across town to Betty's house one evening. Her father said, "If you want to visit someone, why don't you visit Alice? She's close by." Marie answered, "But, Father, I can't talk to Alice about dates and things like that. Alice is fun to go to shows with, but Betty is the only one I can talk to about boys."

Why did Marie want to talk to Betty?

Check with an x the reason or reasons which <u>best</u> explain Marie's wanting to talk to Betty.

____1. Betty is more mature than Alice.
____2. Marie likes Betty better.
____3. Some girls can be trusted more than others not to tell what they talk about.
____4. Betty is more friendly than Alice.
_x_5. Teen-agers like to be with different friends for different reasons.

Generalization O: When family members are able to talk over with each other things which irritate them, their family life is apt to be more happy.

XI. Madeline, 15, the youngest of five children, becomes annoyed when her parents introduce her to strangers and mention that she is their "baby." She often gives the family friends a very poor impression of herself with such remarks as "Do I look like a baby?" or "When will you ever stop calling me a baby?"

What should Madeline do?

Check with an x the answer or answers you think best.

____ A. Act as if she is growing up
____ B. Ignore the remarks
____ C. Act as if she is proud to be called the baby
_x_ D. Talk it over with her parents
____ E. Make a joke of it, when her parents say such things

Check with an x the reason or reasons for choosing your answer (s).

_x_ 1. A better understanding would be created between Madeline and her parents.
____ 2. Her parents are probably just expressing their love for her.
____ 3. She needs to prove to her parents that she is no longer a baby.
____ 4. This would prevent a family squabble.
____ 5. Her friends may tease her if they find out she is called a baby.
____ 6. The remarks she makes embarrass her parents.
____ 7. She is too old to be called a baby and made to feel young and embarrassed in public.

Generalization M: Dating customs vary from community to community.

XII. Hilda, 14, was invited to visit her friend Harriett, 14, for the holiday. They had a good time but when Hilda returned home she remarked to some of her friends, "We went to lots of parties, but, gee, it was kid stuff. The fellows didn't ask for dates as they do here. Why, they didn't even walk the girls home from the party."

What might explain why the fellows acted differently in these two towns?

Check with an x the reason or reasons which <u>best</u> explain their acting differently?

____1. The boys thought they were too young to date.
____2. The girls in Harriett's town neglected the boys.
____3. The boys were afraid of being teased if they dated girls.
__x__4. Towns are not all alike in dating practices.
____5. Sometimes girls are so eager, they scare boys away.
____6. The boys are less mature in Harriett's town.

Generalization F: The more varied our interests, the more opportunities we have for making friends.

XIII. Kay, 14, spends much of her free time reading. She has always read a lot and has few other hobbies. Kay's mother thinks her interests should be much more varied, so she is enrolling Kay in a dancing class and is trying to persuade her to join one of the hobby classes at the "Teen Club."

Why do you think Kay's mother wants her to learn to enjoy more than one activity?

Check with an x the answer or answers you think <u>best</u>.

_____1. Kay could do many things to fill her spare time.
_____2. It could lead to a successful career.
_____3. She can talk to other people more intelligently.
_____4. Too much reading isn't good for her.
_____5. She'll know how to do many things for later in life.
_____6. It becomes boring to do one thing all the time.
__x__7. She'll have a chance to make more friends.

Generalization H: There is no set age when all are ready to date.

XIV. Roberta, 14, asked her mother if she could go to the movies with Fred, 16. Her mother asked her if anyone was going with them. Roberta said, "No, but you let Vivian start dating when she was fourteen."

Do you think that because Vivian was allowed to date at fourteen, is a good reason for letting Roberta date at that age?

Check with an x the answer you think better.

_____ A. Yes
__x__ B. No

Check with an x the reason or reasons for choosing your answer.

_____ 1. Roberta will be resentful toward her mother if she can't do as her sister did.
* x 2. All girls are not ready to date at the same age.
_____ 3. Roberta will think her parents favor Vivian.
* x 4. Some girls are more mature at fourteen than others.
_____ 5. Parents should treat all their children alike.
_____ 6. It would be unfair to deprive Roberta of the privileges her sister had at fourteen.

* Flexible Key 2 or 4

Generalization D: Tasks are usually more effectively accomplished with satisfaction to all, if each person accepts responsibility for developing skills necessary to do his job.

XV. Carrie, 14, was responsible for bringing two cakes to the club bake sale. She had not made very many cakes before so she asked her mother to supervise while she made one for the family first.

Why do you think Carrie was wise to do a "practice" cake first?

Check with an x the reason or reasons why you think Carrie should do a "practice" cake first.

_x_ 1. If each club member is skillful, the bake sale will be a success financially.
___ 2. It would not be as expensive to have one cake fail, as to spoil two cakes.
_x_ 3. Her cakes would be more apt to be good and she could be satisfied with them.
___ 4. If the cakes were not good, they might reflect on her club.
___ 5. Her friends could be proud of her success.

Generalization C: Planning saves irritation

XVI. Mr Harris missed a very important telephone call because Nell, 15, was talking on the phone for half an hour. Mr. Harris was quite disturbed, although Nell told him she was sorry and hadn't realized how long she had talked.

What should be done to prevent this happening again?

Check with an x the answer or answers you think best.

____A. Have another telephone installed.
____B. Tell Nell she needs to make her conversations on the phone shorter.
_x_C. Work out a family schedule of when to use the phone.

Check with an x the reason or reasons which explain your answer(s).

____1. Parent's business is more important than children's social calls.
____2. It isn't good manners to talk on the telephone too long.
_x_3. Family quarrels can be prevented.
_x_4. Everyone will have more chance to use the phone.
____5. Nell probably can talk to her friends enough when she sees them.

Generalization J: People with whom we work and play prefer us to "let off steam" in socially acceptable ways and in appropriate places.

XVII. Nancy, 14, went with her parents to the wedding reception of a family friend. While there Nancy met Ester, 16, who suggested that they go to a movie. Nancy's parents refused permission so she stormed away from them saying, "I can't do anything without you." Her father said, "I know you are disappointed, but do you have to act this way in front of everyone?"

Why do you think Nancy's father was concerned about the way she showed her feelings?

Check with an x the reason or reasons you think <u>best</u> explains why Nancy's father was concerned.

____ 1. It was embarrassing to him for her to act that way in front of his friends and relatives.
____ 2. People who didn't know Nancy would get a bad impression of her.
____ 3. It reflected on the family and the way Nancy had been brought up.
____ 4. He didn't want people to think she was spoiled.
_x_ 5. He realized she had not learned that you can't show your feelings anywhere and anytime.
____ 6. Nancy was too old to act that way.
____ 7. He realized Nancy would have few friends if she continued to act that way.

Generalization L: Girls in most cases mature earlier than boys.

XVIII. Bonnie, 15, planned a barbecue in her backyard and invited the ninth-grade class. She thought it should be great fun as she had spent a lot of time finding unusual games that boys and girls could play together. As soon as everyone had eaten, Bonnie began explaining the rules for a game. Richard exclaimed, "We aren't playing any sissy games. Come on fellows, let's play baseball. There is a vacant lot right behind here."

What might explain why Richard acted as he did?

Check with an x the reason or reasons you think <u>best</u> explain Richard's actions.

____1. He didn't have good manners or know how to act.
____2. He didn't like the idea of playing with girls.
____3. Richard wanted attention.
____4. Boys like games which exclude girls and have lots of action.
____5. He could play baseball very well and was afraid he wouldn't play the new games well.
____6. He was spoiled and used to having his way.
_x_7. At this age, most boys aren't as mature as girls.
____8. Boys like to break up a party for meanness.
____9. He thought the games were for children.

*HOME ECONOMICS EDUCATION; *STUDENT EVALUATION; *FOODS INSTRUCTION; NUTRITION INSTRUCTION; GRADE 9; TESTING; *TEST CONSTRUCTION; *ACHIEVEMENT TESTS

Models for performance and problem solving test items and evaluation devices are provided for adaptation by home economics teachers to the needs of specific ninth grade food classes in the comprehensive high school. The evaluation materials were developed through research projects and trial use in Iowa schools by heterogeneous school groups. The materials are based on subject matter areas: nutrition, food selection and habits, relationship of nutrition to appearance, nutrient retaining preparation techniques, and the planning, buying, storing of foods. Included are (1) objectives to which the evaluation materials relate, (2) suggestions for introducing and interpreting the results of tests, and (3) the problem situations, illustrating generalizations which require the student to give not only the answer but also justification of the answer. Other evaluation materials for home economics areas with a similar format, are available as VT 005 747-VT 005 757 (ARM Summer 1969). (FP)

Describe

Source (agency)
(address)

OBJECTIVES

1. Recognition that each food group makes a unique contribution to the nutrition of the body.
2. Understanding of ways to learn to like foods.
3. Awareness of some of the factors influencing cost of foods.
4. Ability to prepare some products in each food group requiring simple manipulative skills and to recognize relationship between techniques used and product obtained.
5. Understanding of terms used in cookery.
6. Ability to plan meals considering nutritive value of foods as well as color, texture, and flavor.
7. Ability to care for foods to retain maximum nutrients and flavor.
8. Ability to select snacks for children.
9. Ability to apply work simplification principles in the preparation and serving of meals.

Development of the Evaluation Materials

The test items are based on the above objectives and on generalizations from the curriculum guide developed for use in Iowa high schools. The key has been approved by subject-matter specialists.

Use of Evaluation Materials

1. These were designed for use in stimulating pupils to change their food habits and in determining where pupils are at any stage of learning: pre-test, during unit, at end of unit, or as part of a semester test.
2. In selecting the paper-and-pencil test items to use at a particular time, choose those which involve the generalizations that you are concerned with in your teaching. When using these items do not give the generalization listed at the top of each sheet to the pupils.
3. The directions for responding to the paper-and-pencil test items accompany each one. In order to force pupils to consider each solution and reason, the number of correct responses is usually not indicated. If an answer sheet (see example) is used, the directions for recording responses will need to be changed accordingly.
4. To obtain a score for each girl, total only the number of correct responses, (see key on copy of each item), because research indicates that deducting for guessing has little effect on the relative size of the scores unless a pupil checks an unreasonably large number of responses. If it appears that the pupils are checking a large number of responses in the hope of "hitting" the right one, you may want to (1) deduct one point for each incorrect response or (2) set a limit on the number of checks they may use. (If this is done, set the limit slightly above the number of correct responses, however.)
5. In interpreting the responses of your pupils
   (1) Look at the size of the scores in relation to the possible total score to obtain a general idea of the class as a whole and to determine which pupils need special help.
   (2) Tabulate the number of pupils who selected each response and see which generalizations they failed to apply and which misconceptions they hold. These suggest points at which additional learning experiences are needed.

INDEX TO GENERALIZATIONS AND ITEMS FOR EVALUATION FOR FOODS: 9TH GRADE

A. To maintain health it is necessary to have an adequate intake of essential nutrients. These w ill be supplied when a variety of foods from the four food groups is eaten each day.

The minimum recommended amounts are:

1. Milk (or equivalent) - adults 2 cups; adolescents 4 cups; children 3 to 4 cups.
2. Meat (or alternates) - 2 servings
3. Vegetables and fruits - 4 servings, 1 citrous daily and 1 dark green or deep yellow at least every second day.
4. Bread and cereals - 4 servings of whole grain, enriched, or restored. Test Items I and XVII.

B. Citrous fruits and vegetables that are dark green or deep yellow are needed in the diet because they are especially good sources of vitamins. The citrous fruits most commonly available are oranges, grapefruit and lemons. Test Item II,

C. Vegetables prepared and placed in crisper in refrigerator save last-minute preparation. If vegetables are kept at room temperatures after slicing or chopping, they may rapidly lose vitamins through exposure to oxygen in air and to light. Test Item III.

D. Serving temperature and length of time required for cooking each food affect the order in which it is placed in a plan for preparing a meal. Test Item III.

E. Most dried fruits and starchy vegetables require about 30 minutes to cook. Stewed fruits are usually allowed to cool before serving. Test Item III.

F. If foods which dry out easily are prepared just before serving, they will be moist. Test Item III.

G. If the table setting is done when there is a lull in the work or when preparation processes do not need close supervision, time can be saved and confusion avoided. Test Item III.

H. Panfrying is cooking a food in a small amount of fat. Test Item IV.

I. When boiling a food, it is cooked in a liquid at a temperature where bubbles form rapidly and break on the surface. Test Item IV.

J. Pan broiling a food is to cook uncovered on a hot surface,usually a frying pan, and pouring off the fat as it accumulates. Test Item IV.

K. Parboiling is boiling a food until partially cooked. Test Item IV.

L. Broiling or grilling a food is to cook it by direct heat. Test Item IV.

M. Sauteing is browning quickly in a small amount of fat with frequent turning. Test Item IV.

(over)

N. To simmer is to cook in a liquid at a temperature about 185°F. Bubbles form slowly and break below surface. Test Item IV.

O. Stewing is simmering in enough liquid to cover the food. Test Item IV.

P. Steaming a food is to cook it in steam with or without pressure. Test Item IV.

Q. A liking for food usually comes after repeated experiences in tasting it. Gradually introducing the disliked food by serving dishes in which the flavor is partially concealed or diluted will help in acquiring a taste for it. Test Item VI.

R. Bland foods like French toast, eggnog, retain some of the egg flavor because no pronounced flavor was added which conceals the original egg flavor. Test Item VI.

S. Foods using milk and egg retain some of the original flavor if kept bland. Test Item VI.

T. In learning to like a new food it is helpful to eat or drink a small serving of the new food w ith other more familiar or favorite foods. Test Item VI.

U. Small servings of a disliked food taken occasionally will gradually overcome the distaste for it. Test Item VI.

V. In dishes where canned fruits or vegetables are used, and shape is not an essential factor, "Standard" quality is more economical to use than "Fancy" or "Choice." This holds true for broken and unbroken nut halves. Test Item VIII.

W. Frozen vegetables are more expensive than canned vegetables. Test Item VIII.

X. Ground beef varies in price depending on quality of meat and amount of suet. The variation from less to more expensive is usually in the following order: hamburger, lean ground beef, ground round steak. Test Item VIII.

Y. Grade A eggs are more expensive than Grade B eggs because they are better quality. Grade A eggs are used where egg flavor only is involved. Grade B eggs are satisfactory to use in combination with other ingredients where egg flavor is not so important. Test Item VIII.

Z. Packaged ready-to-use foods are usually more expensive than the home-made product. Test Item VIII.

AA. Butter is about twice as expensive as margarine. Test Item VIII.

AB. If the success of the finished product is not dependent on the kind of milk, then reconstituted dry milk solids are more economical than evaporated or fresh whole milk. Test Item VIII.

AC. Eggs, dried beans, dried peas, fish and nuts are included in the meat group. Test Item IX.

AD. Well-balanced meals are not necessarily appetizing, since they may lack contrasts in color, flavor, texture, and shape. Test Item X.

AE. Nuts and similar foods are difficult for small children to chew properly and may lodge in the throat. Test Item XI.

AF. Concentrated sweets dull the appetite for more nutritious foods and lead to a demand for more sweets. Test Item XI.

AG. A healthy child requires no stimulants to sharpen his appetite. Test Item XI.

AH. Restraint needs to be used in serving sweets to children because they are highly concentrated fuel foods. Test Item XI.

AI. Simple desserts, as custards, ice cream and cookies will satisfy a child's desire for sweets. Test Item XI.

AJ. There is some difficulty in digestion of concentrated sweets by small children. Test Item XI.

AK. A large intake of concentrated sweets tends to increase the amount of tooth decay. Test Item XI.

AL. Frequent use of cola beverages is likely to replace milk in the diet of children. Test Item XI.

AM. Planning and following a plan of work makes a task easier and saves time. Test Item XII.

AN. Assembling all materials for a particular kind of work before beginning work, saves time and avoids confusion. Test Item XII.

AO. If dry ingredients are measured first and fats next, one measuring cup can be used for both. Test Item XII.

AP. When foods are prepared in advance, time and energy are released for other activities immediately preceding a meal. Test Item XII.

AQ. Using a double boiler prevents food from burning. Test Item XII.

AR. Good planning of work permits dovetailing of jobs. Test Item XII.

AS. When hot water instead of cold is placed in lower part of double boiler, cooking time is shortened. Test Item XII.

AT. Time and energy are saved by rinsing a dish containing a starchy mixture in cold water. Test Item XII.

AU. Time and energy are saved if the table is set by completing one place setting at a time. Test Item XII.

AV. Time and energy are saved if very soiled dishes are soaked immediately after using. Test Item XII.

(over)

AW. When hot water comes in contact with starch, the starch grains which the water reaches first swell, stick together, and surround dry starch grains forming lumps. Test Item XIII.

AX. Chocolate scorches easily because of its starch content. Test Item XIII

AY. The scum which may form from heating the milk, when chocolate and cocoa beverages are made, is retarded if they are kept covered. Test Item XIII.

AZ. When chocolate and cocoa beverages are beaten just before serving, the beating breaks up the scum and the froth delays its formation. Test Item XIII.

BA. Green vegetables become a yellow-green color when cooked in a covered pan. Test Item XIII.

BB. High temperatures and prolonged heating toughen egg proteins, resulting in shrinkage and expression of fluid or curdling. Test Item XIII.

BC. Foods with strong odors require an air tight container if stored in the refrigerator to prevent the odors from being taken up by other foods. Test Item XIV.

BD. Not all foods require the same degree of coldness to prevent spoilage. Test Item XIV.

BE. The more perishable foods as milk, or fish require a lower temperature than fruits and vegetables. Test Item XIV.

BF. Since freezing does not destroy microorganisms and enzymes but only delays development, they become active when food is thawed. Test Item XIV.

BG. Foods containing fat absorb odors more readily than those with low fat content. Bland foods as water, ice cubes, potatoes, orange juice, may also gradually take on flavors of foods with strong odors. Test Item XIV.

BH. Fresh vegetables and fruits, particularly those without protective covering, are kept crisp and plump for a longer time if evaporation is prevented. Test Item XIV

BI. The skillful food manager plans menus in which there is variety in textures, flavor, color and shape. Test Item XV

BJ. A good manager considers the time required to prepare each food so that too many time-consuming dishes are not included in the same day's menu. Test Item XVI.

BK. Dishes which use many ingredients, require several procedures, or are made in various stages (as whipped jellos and some frozen desserts) are usually more time-consuming than those requiring less handling. Test Item XVI.

Example of an answer sheet that could be used to record responses and, hence avoid having to reproduce the test items each time they are used. Can be adapted for any combination of items.

XVII. Basic Four

Had	Needs
____1.	_____
____2.	_____
____3.	_____
____4.	_____

Generalization:[1]

A. To maintain health it is necessary to have an adequate intake of essential nutrients. These will be supplied when a variety of foods from the four food groups is eaten each day.

The minimum recommended amounts are:

1. Milk (or equivalent) - adults 2 cups; adolescents 4 cups; children 3 to 4 cups
2. Meat (or alternates) - 2 servings
3. Vegetables and fruits - 4 servings, 1 citrous daily and 1 dark green or deep yellow at least every second day
4. Bread and cereals - 4 servings of whole grain, enriched, or restored.

I. Jeanne is planning the meals for her family while her mother is in the hospital. Her older sister, who works in an office, helps her prepare them. She wants to be sure the meals meet the nutritional needs of the two girls, their father and brother, Bob, who is 14.

Below are the meals she planned for one day.

Breakfast

Pineapple juice
Omelet Bacon
Toast Jelly
Coffee

Lunch

Chili
Crackers Head Lettuce Salad
Chocolate Cookies
Ice Cream
Milk Coffee

Dinner

Beef Stew Steamed Rice
Whole Kernel Corn Hot Rolls
Apple Sauce
Coffee

Using the Basic Four Guide, mark (x) before food groups where this day's meals fail to meet requirements.

x ** 1. Milk group
____ 2. Meat group
x 3. Vegetable-fruit group
____ 4. Bread-cereal group

[1] When duplicating the items for use, delete the generalizations given at the top of each page. They are given to help you decide which items to select for use.

**The checks, words, and phrases in the blanks indicate the key which has been approved by specialists in the Department of Food and Nutrition.

Generalization:

B. Citrous fruits and vegetables that are dark-green or deep yellow are needed in the diet because they are especially good sources of vitamins. The citrous fruits most commonly available are oranges, grapefruit and lemons.

II. Below is a list of fruits and vegetables some of which are especially good sources of vitamins. Mark x in front of those that are very high in vitamins.

____	A. Potatoes	____	H. Corn
____	B. Tomato juice	____	I. Peaches
x	C. Carrot sticks	____	J. Head lettuce
____	D. Canned peas	x	K. Leaf lettuce
____	E. Pineapple	x	L. Squash (Acorn, Hubbard, etc.)
x	F. Grapefruit	x	M. Green beans
____	G. Apple	____	N. Cauliflower
		____	O. Celery

C. Vegetables prepared and placed in crisper in refrigerator save last-minute preparation. If vegetables are kept at room temperatures after slicing or chopping, they may rapidly lose vitamins through exposure to oxygen in air and to light.

D. Serving temperature and length of time required for cooking each food affect the order in which it is placed in a plan for preparing a meal.

E. Most dried fruits and starchy vegetables require about 30 minutes to cook. Stewed fruits are usually allowed to cool before serving.

F. If foods which dry out easily are prepared just before serving, they will be more moist.

G. If the table setting is done when there is a lull in the work or when preparation processes do not need close supervision, time can be saved and confusion avoided.

III. Cynthia has been learning to prepare meals in class with three other girls. She and her mother have decided it would be good for her to try her skills in preparing lunch at home for her family on Saturday. This is the menu she plans to use.

Potato Soup

Peanut Butter Sandwiches Carrot Sticks

Stewed Prunes

Below are seven jobs for the preparation of this meal. Select from the list the job to be done first, then write number 1 in the blank beside that job. Continue until all seven jobs have been given a number indicating order of performing them.

List of Jobs

2	A. Pare potatoes, dice, and put on stove to cook.	5	D. Make thin white sauce for soup.
3	B. Make sandwiches	1	E. Put prunes on to stew.
4	C. Make carrot sticks	6	F. Set table.
		7	G. Add white sauce to potatoes.

Generalizations: 9th

H. Panfrying is cooking a food in a small amount of fat.

I. When boiling a food, it is cooked in a liquid at a temperature where bubbles form rapidly and break on the surface.

J. Pan broiling a food is to cook uncovered on a hot surface, usually a frying pan, and pouring off the fat as it accumulates.

K. Parboiling is boiling a food until partially cooked.

L. Broiling or grilling a food is to cook it by direct heat.

M. Sautéing is browning quickly in a small amount of fat with frequent turning.

N. To simmer is to cook in a liquid at a temperature about 185F. Bubbles form slowly and break below surface.

O. Stewing is simmering in enough liquid to cover the food.

P. Steaming a food is to cook it in steam with or without pressure.

IV. Careless cooking methods rarely produce good food. One of the factors that contributes to success in cooking is an understanding of cooking terms. Below is a list of terms used in recipes. See if you can identify each one by finding its definition.

In the blank before each term place the number of the definition which matches the term it defines.

Terms

5 A. Boil
2 B. Broil
2 C. Grill
8 D. Pan-broil
3 E. Parboil
1 F. Pan-fry
7 G. Sauté
9 H. Simmer
6 I. Stew
4 J. Steam

1. To cook in small amount of fat.
2. To cook by direct heat.
3. To boil until partially cooked.
4. To cook in a steam with or without pressure.
5. To cook in a liquid at a temperature where bubbles form rapidly and break on the surface.
6. To simmer or boil in enough liquid to cover the food.
7. To brown quickly in a small amount of fat with frequent turning.
8. To cook uncovered on a hot surface, usually a frying pan. The fat is poured off as it accumulates.
9. To cook in a liquid at a temperature about 185° F. Bubbles form slowly and break below surface.

V. Jeanne and Marie were asked by the refreshment committee to furnish chocolate chip cookies for the annual class picnic. They are to prepare for 36 people and plan to have at least three cookies for each person.

They are to use the recipe for chocolate chip cookies which makes about three dozen cookies.

Chocolate Chip Cookies

1/2 cup shortening
1/2 cup sugar
1/2 cup brown sugar, packed
1 egg
1 & 1/8 sifted enriched flour
1/2 teaspoon salt
2/3 teaspoon baking soda
1 teaspoon water
1 teaspoon vanilla
1/2 cup chopped nuts
1 package (7 oz.) chocolate chips

In the blank before the letter write the number (1, 2, 3, 4,) of the column which contains the correct amount for an ingredient.

		1	2	3	4
3	A. Cups fat	4	$1\frac{1}{4}$	$1\frac{1}{2}$	3
1	B. Cups sugar	$1\frac{1}{2}$	2	3	1-3/8
4	C. Cups brown sugar	3	2	$1\frac{1}{4}$	$1\frac{1}{2}$
3	D. Eggs	1	2	3	4
3	E. Cups flour	1-3/8	2-3/8	3-3/8	5
3	F. Teaspoons salt	$1\frac{1}{4}$	3	$1\frac{1}{4}$	4
2	G. Teaspoons baking soda	1	2	3	4
1	H. Tablespoons water	1	2	3	4
1	I. Tablespoons vanilla	1	2	3	4
1	J. Cups chopped nuts	$1\frac{1}{2}$	4	2	3
3	K. Packages choc. chips	1	4	3	2

Generalizations:

Q. A liking for a food usually comes after repeated experiences in tasting it. Gradually introducing the disliked food by serving dishes in which the flavor is partially concealed or diluted will help in acquiring a taste for it.

R. Bland foods like French toast, eggnog, retain some of the egg flavor because no pronounced flavor was added which conceals the original egg flavor.

S. Food using milk and egg retain some of the original flavor if kept bland.

T. In learning to like a new food it is helpful to eat or drink a small serving of the new food with other more familiar or favorite foods.

U. Small servings of a disliked food taken occasionally will gradually overcome a distaste for it.

VI. Barbara dislikes eggs and milk, but wants to overcome these dislikes.

Using the list below indicate whether a food or food practice will help Barbara learn to like eggs or milk. Mark x in column or columns for each food.

Foods and Food Practices	Eggs	Milk
A. Drink one-fourth glass of milk at a meal		x
B. Cheese sandwich		
C. Vanilla pudding	x	x
D. Hot chocolate		
E. Coffee with cream		
F. Baked custard	x	x
G. Eggnog	x	x
H. Eat small servings of egg with favorite breakfast food	x	
I. Cream of pea soup		x
J. Lemon cream pie		
K. Ice cream (Vanilla)		x
L. French toast	x	

VII. Below are listed twenty-five different jobs in food preparation. These can be done by the pieces of equipment on the table.

Each piece of equipment is numbered. In the space before each job write the number or numbers of the pieces of equipment which perform that job well. A piece of equipment may be used more than once.

Jobs done in Food Preparation

3	A.	beat whole eggs
9	B.	cut shortening into flour
3,4	C.	beat egg whites
13	D.	remove core of apple
5	E.	stir cake batter
1,4,16	F.	fold whipped cream into jellow
6,17	G.	dice meat
17	H.	cut several celery stalks at a time
1,4,16	I.	cut & fold beaten egg whites into a cake
5	J.	cream shortening
17	K.	prepare 1 T. minced onion
5	L.	mix soft batters
9	M.	prepare 1 c. minced onion
6,11	N.	pare potatoes
18	O.	slice bread
9,17	P.	chop nuts
10,15	Q.	shred carrots
10	R.	grate lemon rind
3	S.	whip cream
16	T.	remove piece of pie from pie pan
13	U.	core apple
10,15	V.	cut cabbage for salad

*See back of sheet for Directions to teachers.

Direction to Teacher

Test Item VII. Number the pieces of equipment in the order in which they are listed below. Arrange them on a table in this order. If you do not have a French knife or serrated bread knife and cannot borrow the, substitute another sharp, slicing knife. This sharp, slicing knife may substitute for (17) or for (17 and 18).

1. Flexible narrow spatula
2. Rubber scraper
3. Rotary beater
4. Wire whisk
5. Wooden spoon
6. Paring knife
7. Food grinder
8. Pastry blender
9. Hand food chopper
10. Grater (4 sided)
11. Vegetable peeler
12. Strainer
13. Corer
14. Metal tablespoon
15. Single shredder
16. Wide spatula
17. French knife
18. Serrated bread knife

Generalizations:

V. In dishes where canned fruits or vegetables are used, and shape is not an essential factor, "Standard" quality is more economical to use than "Fancy" or "Choice." This holds true for broken and unbroken nut halves.

W. Frozen vegetables are more expensive than canned vegetables.

X. Ground beef varies in price depending on quality of meat and amount of suet. The variation from less to more expensive is usually in the following order: hamburger, lean ground beef, ground round steak.

Y. Grade A eggs are more expensive than Grade B eggs because they are better quality. Grade A eggs are used where egg flavor only is involved. Grade B eggs are satisfactory to use in combination with other ingredients where egg flavor is not so important.

Z. Packaged ready-to-use foods are usually more expensive than the home-made product.

AA. Butter is about twice as expensive as margarine.

AB. If the success of the finished product is not dependent on the kind of milk, then reconstituted dry milk solids are more economical than evaporated or fresh whole milk.

VIII. Betty's home economics class planned a dinner to be served to the teachers. After they decided on a menu, Betty and her girl friend did the marketing. The problem was to keep expenses down and still retain high quality. The girls had to use good judgment. Sometimes the choice was between two purchases, at other times the choice was between making a purchase or making a product.

Menu
Scalloped Corn with Meat Balls
Cherry Jello Mold
Rolls Butter
Chocolate Chip Cookies
Coffee

Below are some of the choices with which the girls had difficulty. Make your selection by placing a mark (x) in the space before your choice.

For the scalloped corn
____ 1a. Frozen whole kernel corn
x 1b. Canned whole kernel corn

For the meat balls
____ 2a. Hamburger
____ 2b. Ground round steak
x 2c. Lean ground beef

For the bread crumbs in the meat balls
____ 3a. Purchase a package of bread crumbs
x 3b. Make bread crumbs from leftover bread in laboratory

For the butter in cookies
____ 4a. Butter
x 4b. Margarine

For milk in rolls and cookies
____ 5a. Fresh whole milk
x 5b. Dry milk solids
____ 5c. Evaporated milk

For cherry Jello mold
____ 6a. "Fancy" grade cherries
x 6b. "Standard" quality cherries

Nuts for cookies
x 7a. Broken pecans
____ 7b. Pecan halves

For eggs in rolls
____ 8a. Grade A eggs
x 8b. Grade B eggs

Generalizations:

AC. When it is necessary to make a substitution for meat as a source of protein, various combinations of milk, cheese, eggs, dried beans, dried peas, and peanuts may be used.

IX. In most families the large meal of the day usually contains meat. For lunch or supper a food other than meat often is used to help supply the protein needed.

Below is a list of prepared dishes. Place a mark (x) in front of those letters where the prepared dish has a generous amount of protein. In the space to the right state the food in the prepared dish which contains the protein.

Prepared Dishes

x	A.	Baked beans	dried beans
	B.	Chicken noodle soup	
	C.	Potato salad	
x	D.	Tuna fish salad	tuna
x	E.	Omelet	eggs
x	F.	Deviled eggs	eggs
	G.	Sliced bananas with cream	
x	H.	Cottage cheese and tomato	cottage cheese
	I.	Jello with pineapple and carrots	
	J.	Lettuce,bacon, and tomato sandwich	
x	K.	Peanut butter sandwiches	peanut butter

Generalization:

AD. Well balanced meals are not necessarily appetizing, since they may lack contrasts in color, flavor, texture, and shape.

X. When Karen attended the annual 4-H Club convention, the meals were served cafeteria style. Karen's selection for one of the dinners is listed below. Her selection is balanced, but it lacks appetite appeal.

Suggest a change in a food or method of preparation which will give the dinner appetite appeal. Not all of her selections need to be changed. On the blank to the left write the suggestion. On the right give a reason for the change.*

Substitutions	Karen's Selection	Reasons
	A. Creamed Chicken	
Baked Potato	B. Mashed Potatoes	adds color, texture, and shape
Broccoli	C. Buttered Cabbage	adds color
Tossed Salad	D. Pear Salad	adds crispness and color
	E. Milk	
	F. Banana Cream Pie	

*See back side of sheet for suggestions on scoring.

This item requires a flexible key for the substitutions because of the variety of suggestions which may be made to improve color, texture, flavor, and shape.

For example: the main dish may be changed in method of preparation as broiled chicken or roast chicken or the kind of meat as rib roast. This same procedure relates to all parts of the menu.

Generalizations:

AE. Nuts and similar foods are difficult for small children to chew properly and may lodge in the throat.

AF. Concentrated sweets dull the appetite for more nutritious foods and lead to a demand for more sweets.

AG. A healthy child requires no stimulants to sharpen his appetite.

AH. Restraint needs to be used in serving sweets to children because they are highly concentrated fuel foods.

AI. Simple desserts, as custards, ice cream and cookies, will satisfy a child's desire for sweets.

AJ. There is some difficulty in digestion of concentrated sweets by small children.

AK. A large intake of concentrated sweets tends to increase the amount of tooth decay.

AL. Frequent use of cola beverages is likely to replace milk in the diet of children.

XI. The FHA chapter sponsored a series of meetings for girls interested in baby sitting. At the second meeting snacks for children were discussed. The girls were asked to check the foods which were suitable to give to small children.

Below is a list of snack foods. Place a mark (x) before suitable food for children between 2 and 4 years of age. On the space to the right state a reason why you did not check the others.

	Snack Foods	Reasons for not checking
x	A. Grapefruit juice (slightly sweetened)	
x	B. Vanilla cookie	
	C. Tea (slightly sweetened)	(see generalization AG for scoring)
x	D. Apple sauce	
	E. Peanuts	(see generalization AE)
x	F. Tomato juice	
x	G. Carrot sticks	
x	H. Lemon milk pudding	
	I. Hershey bar (without nuts)	(see generalizations AF, AH, AJ and AK)
x	J. Ice cream	
	K. Coca Cola	(see generalizations AG, AF, and AL)

Generalizations: 9th

AM. Planning and following a plan of work makes a task easier and saves time.

AN. Assembling all materials for a particular kind of work before beginning work, saves time and avoids confusion.

AO. If dry ingredients are measured first and fats next, one measuring cup can be used for both.

AP. When foods are prepared in advance, time and energy are released for other activities immediately preceding a meal.

AQ. Using a double boiler prevents food from burning.

AR. Good planning of work permits dovetailing of jobs.

AS. When hot water instead of cold is placed in lower part of double boiler, cooking time is shortened.

AT. Time and energy are saved if the table is set by completing one place setting at a time.

AU. Work and time can be saved by rinsing a dish containing a starchy mixture in cold water.

AV. Time and energy are saved if soiled dishes are soaked immediately after using.

XII. Mrs. Jones was so pleased with the way her ninth-grade daughter, Jeanne, prepared the family breakfast Sunday morning that she called the home economics teacher to tell her. The following day the teacher asked Jeanne to summarize for the class what she did. Jeanne mentioned 10 good management procedures but she gave no reasons why they were good. In the blank space write the reason why each is a good practice.

A. I made a plan of work for myself the night before.	A. (See generalizations AM for scoring)
B. I assembled all my supplies and ingredients before I started to prepare the foods.	B. (See generalization AN)
C. I measured dry ingredients in measuring cup, then fat in same cup.	C. (See generalization AO)
D. I made enough cocoa syrup for five more breakfasts.	D. (See generalization AP)
E. I used the double boiler for cocoa.	E. (See generalization AQ)
F. I set the table while cocoa was cooking.	F. (See generalization AR)
G. I placed hot instead of cold water in bottom part of double boiler.	G. (See generalization AS)
H. I set the table by finishing one setting completely before going to the next.	H. (See generalization AT)
I. I rinsed the oatmeal pan in cold water then I soaked it while we ate breakfast.	I. (See generalization AU and AV)

Generalizations: 9th

AW. When hot water comes in contact with starch, the starch grains which the water reaches first swell, stick together, and surround dry starch grains forming lumps.

AX. Chocolate scorches easily because of its starch content.

AY. The scum which may form from heating the milk, when chocolate and cocoa beverages are made, is retarded if they are kept covered.

AZ. When chocolate and cocoa beverages are beaten just before serving, the beating breaks up the scum and the froth delays its formation.

BA. Green vegetables become a yellow-green color when cooked in a covered pan.

BB. High temperatures and prolonged heating toughen egg proteins, resulting in shrinkage and expression of fluid or curdling.

XIII. Mary Lou was telling her father how science is needed to understand food preparation. She started out fine, but later hestitated about the reasons for several preparation practices.

Below are some of these food preparation practices. Place a check (x) next to that letter in each group which is the best reason.

1. When preparing cocoa, mix cocoa with sugar, salt, and a small amount of cold water for the following reason:
   _____ A. so ingredients will blend well.
   __X__ B. hot water will cause starch to swell and become lumpy.
   _____ C. to separate the starch grains and prevent lumping.
   _____ D. so ingredients will dissolve.

2. Melt chocolate by placing pan over hot water rather than on direct heat because:
   _____ A. it will keep its color better.
   _____ B. chocolate would get lumpy.
   __X__ C. chocolate scorches easily.
   _____ D. it will mix more smoothly.
   _____ E. then chocolate won't stick to pan.

3. Cover a chocolate beverage during cooking:
   _____ A. so it will cook faster.
   _____ B. so the flavor will not evaporate.
   _____ C. to prevent loss of nutrients.
   __X__ D. to prevent scum from forming.
   _____ E. so it will keep its' color.

4. In hard cooking eggs keep water just below boiling:
   _____ A. so they will cook through evenly.
   _____ B. so eggs won't crack.
   _____ C. to keep the vitamins and minerals.
   __X__ D. so protein in egg will not become rubbery.

(over)

5. Beat chocolate beverages just before serving:

X A. so froth will delay forming of scum.
_____ B. so flavor will be thoroughly mixed.
_____ C. so chocolate won't settle to bottom.
_____ D. to prevent them from getting stiff.
_____ E. to give them a foamy look.

6. Keep green vegetables uncovered when cooking:

_____ A. to keep natural flavor.
_____ B. so strong flavor will leave.
_____ C. to help cook them faster.
X D. so they won't become a yellow-green color.
_____ E. so steam will not cook out the vitamins.

7. A custard is baked at 350 in a pan of water because:

_____ A. the milk will curdle if it is cooked at a higher temperature.
_____ B. the flour will not be cooked enough to make it thick if temperature is too low.
X C. a higher temperature than 350 can result in a watery custard.

Generalizations: 9th

BC. Foods with strong odors require an air tight container if stored in the refrigerator to prevent the odors from being taken up by other foods.

BD. Not all foods require the same degree of coldness to prevent spoilage.

BE. The more perishable foods as milk, meat, or fish require a lower temperature than fruits and vegetables.

BF. Since freezing does not destroy microorganisms and enzymes but only delays development, they become active when food is thawed.

BG. Foods containing fat absorb odors more readily than those with low fat content. Bland foods as water, ice cubes, potatoes, orange juice may also gradually take on flavors of foods with strong odors.

BH. Fresh vegetables and fruits, particularly those without protective covering, are kept crisp and plump for a longer time if evaporation is prevented.

XIV. Carol offered to clean the refrigerator Saturday morning. When she was ready to return the foods, she had to decide how and where to place them. Below is a list of the foods she needed to place in the refrigerator. Decide how or where it is best to store each food.

1. In the freezing unit
2. Tightly covered container or plastic bag
3. In the hydrator pan (vegetable crisper)
4. In refrigerator nearest the freezing unit.

In the blank at left write the number or numbers of the phrase which best tells how and where to store the food. In the space to the right tell the reason why.

List of Foods

A. Celery
B. Cantaloupe
C. Frozen peas
D. Coffee cream
E. Apples
F. Lettuce
G. Frozen Poultry (to be used 1 week later)
H. Orange juice (ready to drink)
I. Fresh tomatoes
J. Hamburger (to be used following day)
K. Left over ham salad

Reasons

2,3 A. (See generalization BH for scoring)
2 B. (See generalization BC)
1 C. (See generalization BF)
2,4 D. (See generalization BE)
3 E. (See generalization BH)
2,3 F. (See generalization BH)
1 G. (See generalization BF)
2 H. (See generalization BG)
2 or 3 I. (See generalization BH)
4 J. (See generalization BE)
4 K. (See generalization BE)

Generalization: 9th

BI. The skillful food manager plans menus in which there is variety in texture, flavor, color, and shape.

XV. The home economics class is serving a luncheon to faculty members. Mary and Jeanne are in charge of planning the menu. They agree that the three menus they have already planned are nutritious, but they are now trying to make a decision as to which one has the best variety in color, texture, and shape.

Below are three menus. Decide which one menu is the best and write that number in the square below. Explain the reasons why you made your choice. For example: if one of your reasons for choice is good variety in color, then indicate how variety in color has been obtained in the menu you chose.

Menus

1.
Cold Sliced Turkey
Pear & Cottage Cheese Salad
Hot Buttered French Toast
Angel Food Cake Lemon Sherbet
Coffee

2.
Spaghetti with Meat Balls
Tossed Salad
(carrot, celery, green pepper, lettuce)
Hard Rolls
Gold Cake with Butter Icing
Coffee

3.
Creamed Tuna on Biscuits
Cabbage and Pineapple Salad
Relish Plate
(celery sticks, cauliflower, fresh onions)
Coconut Cream Pie
Coffee

[2]

Variety in color - Brown meat, salad has orange, green, yellow.

Variety in texture - in soft spaghetti, crisp salad, hard rolls, soft cake.

Variety in flavor - tart salad, sweet cake, combination in main dish.

Variety in shape - rolls and meat balls and cake have shape.

Generalizations:

BJ. A good manager considers the time required to prepare each food so that too many time-consuming dishes are not included in the same day's menu.

BK. Dishes which use many ingredients, require several procedures, or are made in various stages (as whipped jellos and some frozen desserts) are usually more time consuming than those requiring less handling.

XVI. Stella's mother went to stay with the grandchildren for a weekend. Stella had full responsibility for preparing the meals for her father and two younger brothers. She was going to the school dance this Saturday night and still had to finish her dress and wash and set her hair, therefore, she had to save time wherever she could.

Below are the meals Stella planned. Some of the foods have a letter in front of them. For these suggest a substitute which will take less time to prepare and yet be equal to or higher in nutritional value than the food Stella planned.*

Menus

Breakfast

(A) Grapefruit Half
Oatmeal
Plain Toast
Hot Chocolate

Lunch

(B) Ham Casserole
Lettuce and Tomato Salad
(C) Fruit Jello
Chocolate Chip Cookies
Milk Tea

Dinner

(D) Pork Roast with Dressing
Baked Potatoes
(E) Creamed Green Beans
Cabbage Slaw
(F) Peach Pie

A. Grapefruit juice

B. Ham Sandwich

C. Fresh fruit

D. Pork roast without dressing

E. Buttered green beans

F. Canned peach halves

*See back side of sheet for suggestion on scoring.

The responses to Item XVI require much flexibility because of wide range of suggestions possible. The precaution to heed is that the suggestion requires less time to prepare and yet remains equal to or higher in nutritional value.

Generalization:

A. To maintain health it is necessary to have an adequate intake of essential nutrients. These will be supplied when a variety of foods from the four food groups is eaten each day.

The minimum recommended amounts are:

1. Milk (or equivalent) - adults 2 cups; adolescents 4 cups; children 3 to 4 cups.
2. Meat (or alternates)-- 2 servings.
3. Vegetables and fruits - 4 servings, 1 citrous daily and 1 dark green or deep yellow at least every second day..
4. Bread and cereals - 4 servings of whole grain, enriched, or restored.

XVII. The coach told Gordon Smith that if he intended to be considered for the athletic program he must change his eating habits. Gordon came to you with a list of foods he ate the preceding day and said, "Here is how I eat almost every day. What's wrong with this?"

Breakfast	Snack
Banana 2 Sweet Rolls Coffee--Cream	Pretzel Sticks and Pop

Lunch	Dinner
Potato Chips *2 Hamburgers - 2 buns Pickle Relish Coke Ice Cream	Beef Roast *2 Mashed Potatoes - Gravy Bread - Butter Chocolate Cake Coffee - Cream

Examine the foods Gordon ate for the day.

Place an x in front of food groups for which Gordon meets the daily requirements. For those not checked indicate in the space to the right how much more he needs.

____	1. Milk group	3-3/4 cups of milk
____	2. Vegetable-fruit group	1 citrus fruit
x	3. Meat group	
x	4. Bread-cereal group	

* All servings are single, average size unless more is indicated by a number. All bread and cereals are enriched.

*ANNUAL REPORTS; *BOARDS OF EDUCATION; *STATE DEPARTMENTS OF EDUCATION; *STATE PROGRAMS; PROGRAM ADMINISTRATION; SCHOOL ADMINISTRATION; SPECIAL SERVICES; INSTRUCTIONAL PROGRAMS; *VOCATIONAL EDUCATION; FEDERAL AID; VOCATIONAL REHABILITATION
OHIO

The work of the State Board of Education and of the Department of Education for the year 1967 and pertinent statistics indicating the status of public schools in Ohio as of the school year 1966-1967 are provided to indicate the needs and problems of Ohio schools in developing solutions to issues confronting public education in an era of urbanization, technology and social change. The content includes sections relating to (1) State Board of Education, (2) Department of Education, (3) Department Services, (4) School Administration, (5) Instruction, (6) Vocational Education, (7) Federal Assistance, and (8) Vocational Rehabilitation. Some major accomplishments in vocational education were: (1) organization of 31 joint vocational school districts, (2) development of two residential vocational schools for disadvantaged youths and adults, (3) establishment of six manpower training centers for educational services for the unemployed, (4) an increase of 18,330 students enrolled in vocational education programs, (5) addition of three new vocational high schools in major cities, and (6) establishment of a center for job preparation and vocational rehabilitation in one major city Included are 83 tables and 3 figures illustrating the educational program in the state. State Board of Education

Columbus 15, Ohio

The Honorable James A. Rhodes
Governor of Ohio
Members of the 108th General Assembly

Gentlemen:

Pursuant to Section 3301.07, Revised Code, the State Board of Education submits for your consideration its Annual Report for the year 1967.

The information compiled herein summarizes the work of the State Board of Education and of the Department of Education. Pertinent financial and other statistics indicate the status of the public schools as of the school year 1966-67.

It is hoped that these data will be helpful in placing into proper perspective the needs and problems of Ohio schools and in developing solutions to the complex issues confronting public education in an era of urbanization, technology and social change.

Amid the demand for more and better education for an increasing number of boys and girls, grateful acknowledgement is made for the indispensable leadership of the Governor and General Assembly in directing the course of education in our state.

Respectfully submitted,

Edward C. Ames

Edward C. Ames, President
State Board of Education

STATE BOARD OF EDUCATION

ABOUT THE STATE BOARD OF EDUCATION

Organized in 1956, the State Board of Education has met almost monthly since its inception in order to keep abreast of the responsibilities and problems confronting it in an era of unprecedented educational demands and developments. Only four meetings a year are mandated.

As the policy making body for public education in Ohio, the State Board of Education's responsibilities include--

- Formulating and administering educational policies relating to instruction, teaching materials, buildings and equipment, transportation of pupils, finance and school district organization;
- Apportioning State and Federal funds to elementary and secondary schools;
- Prescribing minimum school standards;
- Determining who should teach and how they should be prepared;
- Operating the State Schools for the Blind and Deaf;
- Serving as the State Board of Vocational Education and State Board of Vocational Rehabilitation;
- Hearing important issues as a board of review;
- Cooperating with other State and Federal agencies concerning the health and welfare of youth.

Board members are elected directly by the people, on a nonpartisan basis, from each of the 24 Congressional districts. Terms are for six years.

REGULAR MEETINGS OF THE BOARD are on the second Mondays of January, April, July and October. When special meetings are called, they are usually arranged on the second Mondays of other months. Meetings ordinarily begin at 11 a.m.

THE ORDER OF BUSINESS usually followed by the Board is: Call to order, Roll call, Approval of minutes, Public participation, Communications, Report

of the State Superintendent, Old business, New business, Miscellaneous business and Adjournment.

MAJOR HIGHLIGHTS OF 1966-67

During the 1966-67 school year the Board--

Took action toward establishing a Division on Urban Education.

Established the Advisory Council on Teacher Education and Certification that is conducting a comprehensive review of the needs and problems in preparing personnel for classroom service.

Authorized a two-year study of vocational rehabilitation facilities and programs in Ohio by an Advisory Council.

Submitted a Master Plan for School District Organization to the 107th General Assembly.

Completed school district organization studies of 4 counties, acted on 6 requests for transfers of territory; approved proposals for the creation of 4 joint vocational districts; and granted 46 applications for high school charters.

Acted on 112 requests for bond issue elections in excess of 6 per cent but not more than 9 per cent of assessed valuation.

Approved 62 vocational work study programs.

Approved new teacher education programs at Antioch College, Kent State University, University of Cincinnati and Ashland College.

Reviewed 13 sets of plans for state assistance school construction funds and approved 9 sets of plans.

Approved 2,296 vocational education units for state foundation or Vocational Education Act funds reimbursement; an increase of 529 units of the previous year.

Approved contracts for training special education teachers with Bowling Green State University, Kent State University and Western Reserve University.

Approved the budgets of the state's 88 county boards of education.

Expanded special education, providing services to 491 school districts, an increase of 17 districts over the previous year.

Established policy on requirements for vocational education programs to assist school districts in complying with provisions of Revised Code Section 3313.90.

DEPARTMENT OF EDUCATION

Under the direction of the State Board of Education, the State Department of Education is organized to provide leadership, research and service to Ohio schools. Some of the major functions of the Department include:

THE DIVISION OF ELEMENTARY AND SECONDARY EDUCATION administers Board-approved standards for 4,161 public schools and 906 non-public schools.

THE DIVISION OF VOCATIONAL EDUCATION supervises vocational programs serving 85,870 high school students and 149,713 adults.

THE DIVISION OF GUIDANCE AND TESTING provides services to 3,108 school counselors and supports the administration of 870,000 tests in local districts.

THE DIVISION OF SPECIAL EDUCATION administers programs for 180,000 handicapped children in 4,084 teaching units.

THE DIVISION OF TEACHER EDUCATION AND CERTIFICATION supervises the preparation of teachers in 52 institutions graduating approximately 9,500 students annually, and issues 66,570 teaching certificates a year.

THE DIVISION OF SCHOOL FINANCE administers $331,758,897 annually in the State Foundation Program and pupil transportation for 1,049,400 children.

THE DIVISION OF SCHOOL DISTRICT ORGANIZATION assists Ohio's 685 districts in planning for more effective administration of schools.

THE DIVISION OF INSTRUCTIONAL MATERIALS operates an instructional film library of 2,431 titles.

THE DIVISION OF COMPUTER SERVICES AND STATISTICAL REPORTS provides data on Ohio's 685 school districts, 99,000 teachers and 2,319,866 school children.

THE DIVISION OF FEDERAL ASSISTANCE reviews, approves and evaluates projects

under Titles I and II of the Elementary and Secondary Education Act, which are among 31 federal programs bringing approximately $101,515,000 to Ohio schools.

THE SCHOOL FOOD SERVICES SECTION supervises cafeteria programs in 2,443 schools, providing lunches for an average of 725,439 students daily.

THE SCHOOL BUILDING SECTION administers a building assistance program for Ohio schools which has reached a total of $81,000,000 since 1957.

THE BUREAU OF VOCATIONAL REHABILITATION in 1967 assisted a total of 3,698 Ohioans to obtain initial or more suitable employment.

THE STATE SCHOOLS FOR THE BLIND AND DEAF provide a residential educational program for 440 students.

SUMMARY OF DEPARTMENTAL CONFERENCES

Department of Education staff members conducted 1,148 planning conferences and attended 4,308 other conferences throughout the state and nation to assist in developing programs to keep the schools abreast of new educational demands.

The Department conducted or participated in conferences and meetings for the purpose of disseminating information, explanation of new programs, and in-service education of teachers and administrators as follows:

	Conferences	Participants
Local	2,967	116,741
State	4,306	208,683
Regional or National	355	92,868
TOTAL	7,628	418,292

Office consultation was provided to groups and individuals, as follows:

Educators	14,050
Boards of Education	485
Others	5,256
TOTAL	19,791

Department personnel gave 2,248 addresses to groups and organizations throughout Ohio and the nation and spent 16,576 days in the field, including 9,853 visits to schools meeting with educators, conducting conferences and being consultants to educators.

Field consultations were with the following:

Administrators	10,364
Boards of Education	422
Others (school staffs, colleges, lay organizations)	5,366
TOTAL	16,152

Complete school evaluations during the 1966-67 year were accomplished for 172 high schools and 2 elementary schools.

Various school program evaluations numbered 2,110. These included such areas as school lunch programs, transportation programs, vocational and academic programs and others.

DEPARTMENT SERVICES

Department services includes six functional areas: Division of Computer Services and Statistical Reports, Business Office, Department Attorney, School Lunch Program, State Agency for Property Utilization, and Mailing and Duplicating. Information about the three areas of service associated most closely with school operation--statistics, property utilization and school lunch--is reported in the following sections.

Computer Services and Statistical Reports

The Division of Computer Services and Statistical Reports operates mainly with funds from Title V of the Elementary and Secondary Education Act, Title X of the National Defense Education Act, and from the State General Revenue fund. Computer service to the Department of Education is provided by the division in the following areas: school foundation program, pupil transportation, bus maintenance programs, teacher certification, statistical reports from school districts, principal reports, internal accounting, and testing. In addition, services are provided school systems for assistance in the establishment of data processing systems and organizing workshops for school directors of data processing.

The following statistical information is drawn from data compiled by the division.

One-Three Years of College	8.0
Four or More Years of College	7.2

School Lunch

A major Department of Education service is administering the School Lunch, Special Milk, Additional Assistance, Breakfast, and Non-food Assistance Programs. This includes providing nutritionally adequate, well-planned, low-cost food service for students. A low-cost milk program is offered to accompany the lunch and/or to supplement the child's nutritional intake at other times of the day.

Additional assistance in the School Lunch and Special Milk Programs is provided to aide disadvantaged children attending schools located in economically depressed areas. Reimbursement of 10¢ per lunch and/or the full cost of milk is allowed.

Demonstration programs also have been established in districts located in areas of economic need wherein the rate of reimbursement paid these schools is increased 10¢ per lunch so that the charge to the child can be reduced by a like amount.

Through passage of the Child Nutrition Act of 1966, Breakfast and Non-food Assistance (Equipment) Programs are made available in hard-pressed areas of economic need. Breakfasts improve the nutritional status and educational achievement of children and the equipment makes possible more effective nutritional programs for the participants.

TABLE XVIII

OHIO'S PARTICIPATION IN THE NATIONAL SCHOOL LUNCH PROGRAM

Year	Number Schools	Number Lunches	Federal Funds Ohio Allocation	Total Food Expenditure
1958-59	2,006	77,823,528	$3,372,924	$20,798,651

Property Utilization

Federal surplus real and personal property is transferred to state institutions eligible to participate in the program through the Agency for Property Utilization.

This property, such as desks, chairs, tables, motor vehicles, etc., is made available to many schools at very little cost.

TABLE XXI

VALUE OF SURPLUS PROPERTY TRANSFERRED TO SCHOOLS AND INSTITUTIONS

SCHOOL ADMINISTRATION

Five units of the Department provide services in the area of school administration--the Division of School Finance, School Building Assistance, School Organization Services, State School for the Blind, and State School for the Deaf.

School Finance

The Division of School Finance provides leadership, service, research and development to assist school districts to formulate and pursue sound management and fiscal principles within the framework of laws and regulations established by the General Assembly and the State Board of Education.

In administering the State Foundation Program, the Division's objectives are to--

- Distribute foundation program funds to school districts in the most efficient manner.
- Conduct research, regarding the foundation program, pertinent to the Department of Education, school districts, and other interested agencies.
- Provide for auditing of foundation program records and reports submitted by school districts.
- Provide consulting service to school officials in foundation program application.
- Conduct seminars, clinics, and workshops that will assist school personnel in foundation program utilization.
- Provide clear channels of communication, regarding the foundation program, through coorespondence, telephone, meetings, publications, and other media of communication.

- Develop and revise necessary forms and reports that will effectively fulfill foundation program requirements and assist school officials in formulating necessary and adequate record keeping procedure.

The following tables show current expenses, source of revenue and financial data related to Ohio school systems, as compiled by the Division.

TABLE XXII

GRAND TOTAL	$328,745,334.72

FORMULA GUARANTEE AND NON-ADDITIONAL AID SCHOOL DISTRICTS

Ohio school districts needing more than a minimum amount of financial assistance in order to provide a basic program of education are called formula guarantee or additional aid districts. After local tax money is determined, the State Foundation Program provides funds so that costs of salaries, retirement and sick leave, classroom operation and pupil transportation can be met. Also funds for vocational and special education are provided, according to the programs and needs of the district.

Districts having greater amounts of local tax money receive only a minimum state subsidy and are known as minimum guarantee or non-additional aid districts. Being more able to fully support a basic education program, they do not qualify for as much state funds.

TABLE XXIV

*Includes federal funds distributed by the State.

PAYMENTS TO SCHOOL DISTRICTS UNDER PUBLIC LAW 81-874, FY 1967

Title I of Public Law 81-874 provides compensating funds to applicant districts for loss in taxable wealth and for educating the children whose parents live or work on federal property. During the fiscal year ending June 30, 1967, 140 school districts in Ohio received this assistance in the amounts shown:

Transportation

Functions of the Transportation Section include the following:

- To assist in the development of transportation programs, in the school districts, that will provide for safety, adequacy, efficiency, and economy.
- To provide consulting service to school officials in transportation program application.
- To assist school officials in planning and policy making procedures.
- To provide coordination between public and private school officials and between educational and non-educational agencies.
- To assist in establishing and maintaining a proper relationship between school transportation and the total educational program.
- To provide for organizing and conducting school bus driver training programs and assisting in school bus safety instruction.
- To develop, interpret, and implement the (1) minimum standards of school bus design and construction and; (2) rules and regulations of operation.
- To audit school transportation reports for foundation program calculation and reimbursement.
- To provide assistance to boards of education in school bus purchasing procedures.
- To provide assistance to school officials and the Highway Patrol in organizing school bus inspections.
- To provide assistance to school officials in developing school bus maintenance, routing, and scheduling programs.
- To provide assistance to school officials in the analysis of school transportation finance.
- To conduct research pertinent to the needs of the Department of Education, school districts, and other interested agencies.
- To conduct seminars, clinics, and workshops that will assist school personnel in administering transportation programs.

- To develop and revise necessary forms and reports that will effectively fulfill transportation program requirements and assist school officials in formulating necessary and adequate record keeping procedures.

- To provide clear channels of communication regarding transportation.

- To develop informative publications relating to transportation administration.

The following tables summarize the number of pupils transported, number of vehicles, miles traveled, and operating costs for pupil transportation in the State of Ohio for 1966-67, in both additional aid and non additional aid districts.

Pupil Transportation Service Regions

Figure B

Field Services

Since the establishment of the Field Service Section of the Division of School Finance in the spring of 1966 pursuant to enactment of the "Fair Bus Bill" by the 106th General Assembly to provide transportation services to non-public school pupils, the functions of the section have continually expanded.

Major Areas of Service and Program Development

I. Transportation - In cooperation with the Transportation Section

A. Transportation services to non-public school

In school year 1966-67, 126,827 non-public pupils were transported a total of 14,528,880 miles.

B. School bus driver training programs

Assisted in organizing 86 school bus driver training classes with 1,266 drivers completing the course. Field Services Section members taught 28 of these classes.

C. Bus purchasing assistance

In school year 1966-67, assistance was given in purchasing 1,318 school buses.

D. Routing and scheduling surveys

Sixty-one routing surveys were completed in school year 1966-67.

E. Assisted school districts with bus maintenance programs, bus inspection, pupil transportation programs, transportation reports and research.

Summary of Activities and Services for 1967

I. Consultations in Field Service Section offices

A.	Educators	- 2,669
B.	Boards of Education	- 182
C.	Others	- 661

II. Conferences participated in or conducted by Field Service personnel

A.	Local	- 535	(Total of 8,414 participants)
B.	State	- 405	(Total of 28,886 participants)
C.	National or Regional	- 75	(Total of 2,470 participants)

III. Days spent in the field with:

A.	Administrators	- 5,406
B.	Boards of Education	- 106
C.	School Staff Groups	- 182
D.	College or University Groups	- 3
E.	Lay Groups	- 258

IV. A total of 256 addresses were given by Field Service Section personnel

School Building Assistance

The School Building Section of the State Department of Education is responsible for the administration of the state school building assistance program under the provisions of Chapter 3318 of the Revised Code.

This chapter provides that school districts which cannot construct sufficient classroom facilities to house their pupils by bonding themselves to the legal limit of 9% may apply to the State Board of Education for State Assistance in constructing the required facilities in accordance with the provisions of the law and the policies adopted by the State Board of Education.

TABLE XXXV (Continued)

Date Bids Opened	School Districts	Amount of Estimated Conditional Approval	Amount of Contracts Awarded	Amount Under Estimated Conditional Approval	Amount Over Estimated Conditional Approval	Percentages Under or Over Estimated Conditional Approval
11/21/67	Washington Local (Scioto County)	$ 1,539,670	$ 1,615,981.31	$	$ 76,311.31	+ 4.96
	TOTALS	$34,656,734	$36,229,274.65	$937,484.82	$2,510,025.47	+ 4.54 Average

The average cost of construction is equal to 4.54% over the original approved estimate. Several of the cost estimates were originally determined three to four years prior to the date of the award of contracts. All of the original estimates were based upon 1963 cost figures. Several of the projects had 10% added to the base cost figures, others had 5% and still others no percentage added at all to compensate for increased cost of construction. The average for the twenty projects listed above is 12.79% over the 1963 cost figures. The construction costs in the State of Ohio have increased approximately 20% to 25% since 1963.

The twenty projects listed above will provide 40 new buildings--18 elementary, 4 junior high, and 18 high schools. The new buildings will provide an additional 873 classrooms to house 23,526 additional pupils.

The following School Building Projects Pursuant to Chapter 3318 R.C. for which Construction Bids have not been received.

The dates indicated are on Projects where Bid Dates have been established. Where only the Month is mentioned, that is the Target Date for the Bid Opening.

New Carlisle-Bethel Local, Clark County	June 1968
Minford Local, Scioto County	June 1968
Mad River-Green Local, Clark Coutny	3/21/68
Valley View Local, Montgomery County	July 1968
Wheelersburg Local, Scioto County	2/27/68
Rock Hill Local, Lawrence County	4/30/68
Madison Local, Montgomery County	3/26/68
Meigs Local, Meigs County	4/23/68

The following is a List of State School Building Projects where Loose Equipment must still be Purchased.

Where the Exact Date is listed, that is the Date that has been established for the Bid Opening. All others are Target Dates for the Bid Opening.

Total Estimated Cost of School Projects for which contracts are still to be awarded as of June 30, 1967.....		$37,056,698.79

School District Organization

The State Board of Education gains its primary responsibility for school district organization through Sections 3311.29, 3311.37, and 3311.38 of the Revised Code. These sections of the statutes deal with changes of school district boundary lines, creating and dissolving school districts. Sections 3311.24 and 3311.06 are initiated by the electorate or boards of education throughout the state but final action of the State Board of Education is required before the initiated action can be consummated. The remaining sections of code 3311.22, 3311.231, and 3311.26, which pertain to the change in school district organizations, are designed to permit the citizens or the county boards of education authority to initiate school district reorganization.

Sections 3311.37 and 3311.38 permit the State Board to inaugurate studies of school districts which ultimately lead to a vote of the electorate relative to the formation of a new school district or change in school district boundary lines. An amendment of Section 3311.29 by the 107th General Assembly permits the State Board to dissolve school districts, after July 1, 1968, which do not operate grades one through twelve. Sections 3301.16 and 3301.161 permit the State Board of Education to dissolve a school district and affect a reorganization if the electorate does not seek a petition of referendum when the school district charter is revoked.

At the October, 1966 meeting, the State Board of Education placed a moratorium on the transfer of school district territory as it relates to municipal annexation under Section 3311.06. The moratorium was invoked to give the State Board an opportunity to study the Master Plan for School District Organization in Ohio and permit the 107th Ohio General Assembly time to consider bills which are developed to implement recommendations of the Master Plan.

From July, 1966 through December, 1967, the State Board has acted on six transfer of territory requests which relate to municipal annexation because boards of education involved with the affected territory have not objected to the transfer of territory under Section 3311.06. During the same period of time, the State Board has approved the transfer of three parcels of land in compliance with Section 3311.24. One new school district was created under Section 3311.37.

STATE SCHOOLS FOR BLIND AND DEAF

OHIO SCHOOL FOR THE DEAF

Founded in 1829, the Ohio School for the Deaf was for many years located in downtown Columbus. In October, 1953, the school moved to the present location, 500 Morse Road. This is an entirely new plant which occupies 130 acres. The inventoried value of buildings, grounds and equipment is $4,017,984.00.

Deaf children are admitted to the school under procedures adopted by the State Board of Education. The minimum age for admission is a maturity level of five years. Admissions are limited to children whose hearing loss in the speech range exceeds 70 db (ISO) in the better ear. It is required that children be mentally and physically fit and capable of being integrated into the overall program of the school. The Course of Study covers 14 years, including 5 primary grades, 5 intermediate grades, and 4 of high school. Pupils are instructed orally so far as this is practical. Manual instruction is available to those who are held back by oral instruction. Auditory and visual aids are used extensively. In addition to academic instruction, vocational offerings are available in printing, linotyping, and offset; shoe repairing and leather work; foods and clothing, tailoring; baking; business machines; metal work; and driver education.

The health program, based in the school hospital, insures each pupil of the best of care.

The school has an extensive program of extra-curricular activities. In athletics the school participates in basketball and track. During the 1966-67 school year of 180 days (plus 4 additional days for meetings), enrollment included 149 boys and 116 girls, a total of 265 students. They came from 73 counties. The pupils all go home for the summer vacation and also for Thanksgiving, Christmas, and Easter. Many go home for weekends.

Through Title I funds several programs were initiated. These included a work-study program, visual aids assistance, operation of business machines, and orthodontia for several students in need of such.

A Vocational Rehabilitation counselor established an office in the school to serve not only the school but the area and he spent one full day each week at the school.

OHIO SCHOOL FOR THE BLIND

The Ohio State School for the Blind is a residential school for blind children. It was founded July 4, 1847 as the first state supported school for the blind in the U.S.A.

Blind boys and girls of legal school age who are residents of Ohio and who are capable of profiting from the instructional program may be admitted. Admission procedures adopted by the State Board of Education require that all referrals be made by school district of residency of the blind child to the Division of Special Education. The child and parents are next seen by a staff clinic team for evaluation. Recommendations are then made to the local school district for appropriate action.

Enrollment for 1966-67 in grades K-12 was 88 girls and 115 boys.

The Ohio State School for the Blind meets standards adopted by the State Board of Education. School is in session 182 days from September through early June. All pupils are home for the summer months. Most pupils go home frequently for weekends and all pupils must go home for Thanksgiving, Christmas and Easter recesses.

Placement is geared to the needs of each child. Because of the availability of an Educational Clinic Team, Medical Clinic Team, school psychologist, small classes, special classes for slow learners, speech therapists, and a highly skilled staff many adjustments in program can be made as needed. The school has an excellent library and one of the better collection of tactual models in the nation.

Home economics, arts and crafts, industrial arts and typewriting are introduced at fifth grade level.

The school has two teachers of physical education plus a peripatologist who devote full time teaching physical development, games, mobility and independent travel skills.

The school has a bond and a chorus. Piano, organ, voice and instrumental music are taught.

Through the Bureau of Services for the Blind a vocational rehabilitation counselor is available on a full-time basis to counsel students regarding future education and future employment.

INSTRUCTION

Five divisions comprise the area of instruction in the Department of Education. They are Elementary and Secondary Education, Guidance and Testing, Instructional Aids, Special Education, and Teacher Education and Certification.

Elementary and Secondary Education

Among the functions of the Division of Elementary and Secondary Education are the following--

- Evaluation and approval of courses of study submitted by school districts as required by law
- Inspection of high schools for compliance with minimum state standards for chartering of such schools
- Visitation of elementary schools and assistance in the evaluation and development of elementary school programs
- Approval of driver education programs and assistance of higher institutions in developing preparation programs for driver educators
- Consultation to teacher preparation institutions on major and minor programs, particularly in special areas of the curriculum
- Consultative services to schools in the areas of art, humanities, health, physical education, recreation, safety, outdoor education, music, industrial arts, narcotic and alcohol education, conservation, adult education, English, reading, social studies, mathematics and modern foreign languages.

The Division conducted the 12th Annual Conference on Educational Leadership in October 1967 and 510 school supervisors and administrators participating.

The number of schools under the Division's supervision is shown below.

NDEA Title III

The Division's National Defense Education Act Title III Section administered programs which made possible state supervisory services in the critical subjects of arts, civics, economics, English, geography, history, humanities, math, modern foreign languages, reading and science. Workshops for 18,173 teachers in those subjects and $4,411,337 in matching funds to school districts for the purchase of instructional materials.

GENERAL ADULT EDUCATION

The Division estimated that there were 350 programs of general adult education conducted in Ohio schools during 1965-66. A full-time supervisor of adult education in the Division assists schools in developing such programs.

Courses which were usually offered on a self-supporting, or tuition, basis included self-improvement programs (art and music appreciation, creative writing, remedial and speed reading, speech improvement), civic and public affairs, elementary and secondary credit courses, business education (typewriting, shorthand, bookkeeping, data processing and related business courses), industrial arts (woodworking, machine shop, electronics, furniture refinishing and upholstering), and hobby courses (ceramics, knitting, sewing and cooking).

Some school districts offered basic education, both elementary and high-school credit, free of charge or substantially subsidized. A few school districts provide courses free of charge to senior citizens. In most cases, however, such programs are self-supporting through tuition payments.

In addition to the adults who graduated from chartered evening high schools (see below), approximately 175 other persons achieved a high school diploma through general adult education programs.

Chartered high schools have been established at the Lebanon Correctional Institution and the Ohio State Reformatory at Mansfield enabling a total of 111 inmates to graduate in 1967.

TABLE XLII

CHARTERED EVENING HIGH SCHOOLS IN OHIO

CURRICULUM GUIDE FOR INDUSTRIAL CRAFTS IN OHIO SCHOOLS
CURRICULUM GUIDE FOR WOODWORKING IN OHIO SCHOOLS
CURRICULUM GUIDE FOR METALS IN OHIO SCHOOLS
CURRICULUM GUIDE FOR DRAFTING IN OHIO SCHOOLS
CURRICULUM GUIDE FOR POWER MECHANICS IN OHIO SCHOOLS

Guidance and Testing

The Division of Guidance and Testing assists schools in providing services to help boys and girls toward realistic educational and vocational goals, make good educational progress in school, develop skills, and assume responsibility for their self-direction.

The National Defense Education Act of 1958, as amended, Title V-A, which is administered by the Division has given major impetus to the continued expansion and improvement of school guidance and testing programs in Ohio, as indicated in the following table.

TABLE XLIII
GROWTH OF SECONDARY GUIDANCE PROGRAMS
IN NDEA PARTICIPATING SCHOOLS

	1959-60	1966-67
Counselors in NDEA Participating Schools	678	1966
Full-time Counselor Equivalents	323	1724
Percentage Holding Counselor's Certificate	47%	88%
Tests Administered, Grades 7-12	68,794	400,841
Tests Administered, Grades 3-6	0	476,683

In addition to the 1966 counselors in NDEA participating schools, there were 727 counselors in non-NDEA-participating schools, for a total of 2,693.

During 1965-66, NDEA reimbursement was extended to the elementary grades. During 1966-67, seventeen pilot, demonstration and experimental elementary school guidance projects were supported in schools enrolling over 33,000 elementary pupils. These programs should become models for further extension of elementary school guidance services in the state.

Ohio Testing Services

Through Ohio Testing services, the Division has the responsibility for the development and administration of the state testing program. During 1965-66 the Ohio Survey Tests were developed and introduced for use in grades 4, 6, 8 and 10 to measure verbal and numerical ability and achievement in reading, mathematics and English expression. Over 246,000 of these tests were administered in September 1967, an increase of more than 76,000 over the September 1965 administration.

Other test programs included the Preliminary and Final District-State Tests of Scholastic Achievement (21 academic areas), the Ohio History Test, and the Ohio Adult Equivalency Testing Programs (high school equivalence and norms for grades 8, 9 and 10).

Other Activities

Other major activities of the Division during 1966-67 included--

- Distribution of Ohio Guidance News & Views and related materials to 4000 guidance workers bimonthly.

- Conducted the 15th All Ohio Guidance Conference, Seventh Elementary Guidance Conference, and Fifth Junior High School Conference for a total of more than 2000 participants.

- Made 11 vocational and technical education interest surveys involving 18,225 students.

- Published 20 major guidance handbooks and conference reports, approximately 30 minor publications, and produced one sound filmstrip. Major publications included:

  Dictionary of Guidance Terms
  Directory of Counselor Education in Ohio
  Elementary Guidance in Ohio: A compilation of Project Abstracts
  National and State Secondary School Testing Programs
  The Ohio Vocational Education Notebook
  The Ohio Apprenticeship Notebook--Building for a Greater Ohio
  The Fifth Ohio College Notebook for School Counselors
  School Counselor's Guide for the Use of the General Aptitude Test Battery

- Participated in a combined total of 438 educational conferences or workshops on guidance and testing. These conferences were attended by approximately 35,000 teachers, counselors, and administrators.

- Participated in six high school-college articulation conferences serving 830 school counselors and college admissions personnel.

- Eighteen regional workshops were conducted with school counselors on the administration and interpretation of the General Aptitude Test Battery. Each workshop had a duration of three and one-half days. Approximately 277 certificated school counselors participated in this program. In addition, seven one-day retraining programs were conducted for 132 counselors who had been trained previously but who wished to become familiar with new information.

- Materials and procedures were developed for the purpose of assisting schools in conducting guidance program evaluations. Forty schools were assisted in the collection and summarization of student and teacher opinions, beliefs, and understandings about the guidance programs in their schools.

- The state staff participated in consultative or other capacities in the field in presenting the state program and in discussing other guidance topics with 279 school administrator groups, 339 school staff groups, and 129 lay groups.

- Approximately 200 students in counselor education programs visited the offices of the Division of Guidance and Testing and were given individual help. Office conferences were also held with 906 educators and 308 other individuals.

- The state staff made 1,761 visits of one or more days to 1,089* schools throughout the state, consulting with local administrators, guidance directors, or committees regarding the initiation or extension of local school guidance programs. This included consultation on guidance program planning, the initiation of specific aspects of the guidance program, or the evaluation of the existing guidance programs. Program evaluatioons were made in 140 schools.

Instructional Aids

Expansion of its services to schools through its three major units was accomplished during the 1966-67 school year by the Division of Instructional Materials. Professional field services, free-loan film service and production service reached more teachers and pupils than during the previous report year.

Division staff members spent 259 days in the field conducting 266 meetings with educators, participating in 50 conferences and presenting 72 talks on instructional materials. Forty-six conferences were held with district school boards, 42 with college or university groups and 27 meetings with lay organizations. These activities are intended to help teachers and schools do a better job of teaching using, audio-visual aids and materials.

Orders were filled from 81 of the state's 88 counties. These were drawn from the department's library containing 2,375 titles. Total enrollment of students served by the orders was 1,219,233.

In serving the specialists on the department of education staff with visual aids for their presentations in the field, the production services section of the division prepared 1,602 transparencies, 873 title strips, 138 pieces of art, filmstrips, posters and printing and 517 laminated items.

---

*Statistical data on numbers of meetings and personnel served include duplications in instances when two or more staff members participated.

Special Education

The primary objective of the Division of Special Education is to aid the public schools of Ohio in providing adequate educational opportunities and services which will enable handicapped children, who deviate to the degree that they cannot receive maximum growth and development in the regular classroom situation, to develop their individual potentialities along with normal children. This objective is accomplished through financial aid, leadership in program development, pre-service and in-service training of teachers, research and demonstration, field service and supervision, and direct services to children and parents.

FIELD SERVICES AND PROGRAM DEVELOPMENT

During the 1966-67 school year, over 171,250 children in Ohio's school districts received services or attended classroom units approved for school foundation support under the administration and supervision of this Division.

Four hundred ninety one of Ohio's school districts had one or more approved units in the various areas of Special Education during the 1966-67 school year. This is an increase of 17 school districts over the preceding school year and represents over 62 per cent of Ohio's school districts.

All areas of special education saw increases in number of children receiving services except in the area of the visually handicapped. The greatest numbers of children being served were in units for slow learning, by school psychologists and speech and hearing therapists. There was a significant increase in children being served in the area of the neurological handicapped.

Major activities of the Division during 1966-67 year included--

- Conducted or participated in 331 conferences or work sessions serving 56,449 persons; delivery of 274 addresses; 1033 1/2 days of field service to schools and 1108 meetings with school, college and lay groups and individuals.

- Evaluation of 251 special education programs and 719 visitations to schools.

- Publication of 19 new program guides, directories and reports and filling 2,486, requests for publications, 934 from outside Ohio including 24 from foreign countries.

- Conducted 26 experimental programs or studies in cooperation with South-Western City District, Mayfield City District, Westerville District, Newark City, Columbus, Canton, Kent, Stark County, Hamilton City, Wadsworth City and others.

- Developed state plan for obtaining federal funds for purposes of expanding and improving efforts to educate handicapped children under Title VI, of Public Law 89-750. Ohio received $116,164 through June 30, 1967 for such planning.

Other Division work is presented as follows:

Statistical Report

This report presents a statistical breakdown of the various programs in the Division by locating the type of school district in which the various units are located, the number of districts, the number of units in those districts, and the total enrollment of students in the approved units.

Also presented is a comparison of the total special education units for the five year period from 1962-1967. Significant to note during this five year period is that all areas of special education increased in the number of approved units except those in physical therapy and the visiting-teacher-counselor program. Most growth can be seen in the areas of slow-learning, neurologically handicapped, school psychology, and speech and hearing therapy. Units for neurologically handicapped children increased 63.3% during the five year period. The total special education unit increase has been 67.6%.

1966-67	2,076,643.98

Teacher Training

The Division administers two teacher education programs to assist local districts in obtaining or retraining teachers suitable for special education programs.

State funds have been appropriated to strengthen such programs at institutions of higher learning in the state. Contracts between the Division and teacher preparation institutions totaled $34,067.20 during 1966-67. The increase in the area can be compared to the preceding four years on the table below.

TABLE XLVIII
SPECIAL EDUCATION TEACHER
TRAINING CONTRACT COSTS

Actual Expenditures

1962-63	$57,923.62
1963-64	67,306.62
1964-65	7,360.00
1965-66	20,055.00
1966-67	34,067.20

The Ohio Department of Education, Division of Special Education was allocated $133,320 by the United States Office of Education under Public Law 85-926, as amended, for the 1966-67 award year. This law provides grants to State Educational Agencies to assist in the training of professional personnel involved in the teaching or supervising of handicapped children. Public Law 85-926, as amended, includes the following categories of handicapped children: mentally retarded, speech handicapped, emotionally disturbed, deaf, visually handicapped, crippled and other health impaired.

Upon the recommendation of the Screening Committee chosen from the Advisory Committee of Special Education and using the available funds, the Division of Special Education awarded 15 fellowships to teachers of slow learning, speech and hearing, emotionally disturbed and administration to provide training for leadership personnel. Six in-service special study institutes were held for teachers of deaf, slow learning and other health-impaired, and for administrators of special education. The special study institutes were attended by 265 teachers and administrators.

Legal Dismissal

Two thousand, six hundred, nineteen applications for legal dismissals from school attendance were processed and approved to the schools of Ohio.

1966-67	2,585

Programs for Blind Pupils

The Division of Special Education has developed the following procedures:

- A registration procedure for all school districts in Ohio.
- Instruct all school districts regarding general registration procedures, amounts of quota available and federal laws and regulations.
- A record system has been established to keep an accurate record of registration, amounts of the quota used and the balances for each school district involved.
- A record is kept of all requests for materials requested, loaned or returned.

TABLE L

NUMBER OF BLIND CHILDREN RECEIVING SERVICES THROUGH THE AMERICAN PRINTING HOUSE FOR THE BLIND

Year	Number Children Registered	Quota Administered
1962-63	632	$25,261.22
1963-64	613	26,316.91

1965-66	653	32,727.76
1966-67	696	34,726.04

Evaluation Clinics for Deaf and Blind Children

The Division of Special Education is responsible for conducting evaluation clinics for deaf and blind children who are referred for entrance to the Ohio Schools for the Deaf and Blind.

There are two types of evaluation clinics:

- Educational Clinic -- All children referred are administered psychological, audiological and educational evaluations.

- Medical Clinic -- Children needing further or specialized medical evaluations before educational recommendations are finalized can be referred and will be evaluated by a neurologist, a pediatrician, an otologist, and an opthalmologist.

Throughout the 1966-67 school year 258 children were seen for evaluation in these clinics.

Academically Gifted Program

The emphasis in the Academically Gifted Program during this year has been placed upon research and demonstration projects within fiscal limitations, stimulation of current programs within local school districts, consultative services, and attendance at regional, state and national conferences concerned with the gifted student.

Experimental projects were partially funded in three school districts:

- A research study of the value of the Suchman method of inquiry training, the value of differential instructional methods, and the use of lay consultants with gifted elementary school children.

- A demonstration project involving the stimulation of creative potential using groups of high creative and low creative students at the elementary level. This operated as a pilot project in an ESEA Title III project which was funded as a planning grant.

- Funding for planning of a senior high school program for gifted students in the scientific and creative areas. This program will eventually place selected students into industry on a part-time basis.

A statewide survey of educational provisions for academically gifted students was begun in February 1967. Data are currently being compiled. Statewide distribution on a publication of these findings will be made in Spring, 1968.

Two publications were reprinted and distributed to districts requesting them due to unprecedented demand.

Several speaking engagements were made to university classes, parent teacher organizations, administrators organizations, teachers' groups, and professional organizations dealing with gifted children.

Further support of school psychologists in Ohio was enlisted in the validation of the Behavioral Rating Scale for twelve fourteen-year-old gifted children.

Teacher Education and Certification

In 1966-67 the Division of Teacher Education and Certification had responsibility for supervision of teacher preparation programs in 52 Ohio colleges and universities. It issued 65,844 certificates of all grades and types for teachers qualified to teach in Ohio classrooms.

During the year the Division participated in or conducted 18 conferences attended by 2,100 persons. In addition to the large volume of business done by mail, office conferences were conducted with 2,819 educators and 933 other visitors seeking advice and information concerning certification requirements.

Standards for teacher education and certification in Ohio are set forth in the Division publication Laws and Regulations Governing the Certification of Teachers, Administrators, Supervisors and School Employees in Pupil Personnel Service. Data concerning the supply and demand for teachers in Ohio schools and the enrollments in teacher preparation institutions are summarized by the Division each year in a report, A Statistical Summary of Teacher Supply and Demand. Some of these statistics are summarized in the following tables.

TABLE LI

VOCATIONAL EDUCATION

With the assistance of federal and state vocational funds, the Division of Vocational Education carries on a wide range of activities to develop and supervise programs for youth and adults, prepare vocational teachers, and plan and develop needed facilities.

As the following tables indicate, significant growth took place during 1966-67. The growth of enrollments in vocational education was unprecedented--an increase in enrollments of youth and adults of 35,059. Enrollments at the high school level increased 18,330, the greatest increase in the history of vocational education.

Plans for area vocational centers and expanded programs in larger cities included organization of seven additional joint districts and plans for expanded facilities in seven metropolitan areas during the year. It brought to 31 the number of joint vocational districts, with five of the districts in operation, seven more had voted construction and operating funds and were in some stage of planning or construction. Four additional Joint Vocational Districts had voted their local funds for equipment and operation and were waiting on matching money from state or federal funds. New vocational units also were in planning stages in Cleveland.

In 1967 Ohio was second ranking state in the nation in the number of Manpower Development and Training Projects with 149 under way. It ranked third in enrollments, with 8,788 students, and fifth in expenditures, with $14,734,043. Over a two-year period, in 1965 and 1966, Ohio invested $12,247,808 in MDTA education, 62% of it in the seven largest cities--26% in Cleveland, the largest city.

Technical education also continued to grow, with full-time enrollments up from 1,812 to 2,646. A new center was added in Cincinnati Public Schools. There also was a total of 73 centers for disadvantaged youth, enrolling 3,229 students.

Outstanding features of the State program:

. As of the close of the fiscal year 1967, the outstanding accomplishments

with regard to the State program show that thirty-one joint vocational school districts have been organized covering 297 school districts in forty-eight counties. Twelve joint vocational school districts have been fully funded. Five of these are in operation; seven are under construction. Four additional districts have voted their local funds and are waiting assistance from State or Federal funds for construction and equipment.

- Two residential vocational schools have been developed for disadvantaged youth and adults with the assistance of funds from the Manpower Development and Training program.

- Manpower training centers for full-time educational services for the unemployed have been established in Cleveland, Columbus, Cincinnati, Akron, Dayton and Youngstown.

- Enrollment of high school youth in Vocational Education programs has increased by more than 18,330 students over a period of one year.

- Our major cities have added three new vocational high schools: one major addition for Vocational Education to an existing high school and remodeled additional facilities in three of the cities for additional expansion in Vocational Education.

- One major city has established a center for job preparation and vocational rehabilitation designed to serve school alienated or disoriented youth.

- A leadership development program designed to train directors and supervisors for Vocational Education including an internship program has been developed.

- A master plan for the establishment of fifty-four joint vocational school districts to serve small cities, suburban and rural areas of Ohio has been developed. This master plan includes the development of vocational centers in the large metropolitan areas so that when implemented it will make it possible for every person in the State of Ohio to have access to a comprehensive program of Vocational Education.

Veterans Training

During the period from July 1, 1966 to June 30, 1967, the State Approving Agency for Veterans' Training had the responsibility for the approval and inspection of educational institutions of higher learning and those below college level for the enrollment of eligible veteran and war orphan students as provided under Public Law 358.

The Veterans' Readjustment Benefits Act of 1966 (Public Law 358) went into

effect on June 1, 1966. This act provided for the awarding of educational benefits to veterans, who had served on active duty for a period of more than 180 days, any part of which occurred after January 31, 1955, and who were discharged therefrom under conditions other than dishonorable. This law also provided for war orphans.

During the first year of operation under this law, over 20,000 veterans and war orphans within the State of Ohio received educational benefits in 418 educational institutions approved within the State by the State Approving Agency for Veterans' Training under the Ohio State Department of Education.

As of June 30, 1967, the total physical count of educational institutions approved within the State of Ohio for this purpose was as follows:

TABLE LXIII

INSTITUTIONS APPROVED FOR VETERANS TRAINING

Accredited Institutions

80	Colleges and Universities (Higher Learning)
111	Hospitals (Schools of Nursing--Residency Internships)
16	High Schools
207	Total

During that period, the following was reported:

128	Applications received for new approvals	627	Applications approved
616	Applications received for revisions	93	Applications disapproved
		24	Applications pending
744	Total	744	Total

A total of 29 approvals were withdrawn due to violations or for other reasons.

FEDERAL ASSISTANCE

The Division of Federal Assistance administers the various titles and programs of the Elementary and Secondary Education Act. During fiscal year 1967 (July 1, 1966--June 30, 1967), the division had eight distinct areas of responsibility. These areas were:

- Basic Title I programs designed to meet the needs of selected educationally disadvantaged children (P.L. 89-10).

- Special Title I programs designed to meet the educational needs of mentally retarded, emotionally distrubed, deaf, and visually handicapped children in state institutions (P.L. 89-313).

- Special Title I programs designed to meet the educational needs of orphaned, neglected, and delinquent children in state institutions (P.L. 89-750).

- Special Title I programs designed to meet the educational needs of children of migratory agricultural workers (P.L. 89-750).

- Title II programs, which provides both basic grants for library resources and instructional materials and special purpose grants for special collections (P.L. 89-10).

- Title III programs for research and demonstration purposes. During fiscal year 1967, this program was administered directly from the U. S. Office of Education; the role of the Division of Federal Assistance was of a liaison and advisory nature (P.L. 89-10).

- Title V programs for strengthening the Ohio Department of Education (P.L. 89-10).

- Adult Basic Education Programs for individuals who have attained age eighteen and who have less than an eighth-grade education or its functional equivalency (P.L. 89-750).

Conferences and Field Services

The principal means by which Division of Federal Assistance staff members provided information about the various titles of the Elementary and Secondary Education Act were: (1) office conferences, primarily with school superintendents or their appointed representatives, (2) conferences and workshops for specified groups of educators, and (3) field services, including on-site visits of funded projects and meetings with various groups of educators. For statistical details and a listing of conferences, see the following table.

INVOLVEMENT OF INDIVIDUAL DIVISION OF FEDERAL ASSISTANCE STAFF MEMBERS IN CONFERENCES AND FIELD SERVICES DURING FISCAL YEAR 1967

Office conferences with educators		2,651
Office conferences with others		475
Meetings to plan educational conferences		63
Participation in educational conferences		297
Local	165	
Statewide	86	
Regional or national	46	
Other educational conferences attended		56
Addresses given		176
Field Services		
Days spent in the field		621
Visits to schools		494
Program evaluations within schools		196
Meetings with administrators		353
Meetings with school staff groups		63
Meetings with college or university groups		22
Meetings with lay groups		19
Meetings with boards of education		4

Programs for Disadvantaged Pupils

Title I of the Elementary and Secondary Education Act of 1965 provides grants of federal funds to local public school districts for educational programs for educationally disadvantaged students--either public or non-public--who live in areas of high concentrations of children from low-income families. Although non-public youth participate in Title I projects, only public school districts can apply for grants.

The basic grant for each public school district is based on a formula dependent upon the number of children--including ones who attend non-public schools--from low-income families that reside in the attendance areas served by that district. By the nature of the formula, nearly all public school districts in Ohio qualify for funds; however, in proportion to the number of children served, major cities and impoverished rural communities qualify for, and expend, substantially larger grants.

TABLE LXIV

NUMBER OF SCHOOL DISTRICTS, TITLE I PROGRAMS, 1966-67

Type of District	Received Grants for Programs	Eligible, but Non-Participating	Ineligible for Grants
City	153	10	0
Exempted Village	48	6	0
Local	449	35	7
TOTAL	650	51	7

Each pupil selected for participation in a Title I project was typically involved in one or more instructional or service activities. Patterns of involvement varied from district to district and from project to project. On a statewide basis, however, certain patterns emerged. Communication instructional activities were offered to approximately three and a half times as many pupils as any other activity. Distribution of pupil participation among the major instructional and service activities was as follows:

72.8% were in communications instructional activities (reading, language arts)
20.8% were in arts and humanities activities
10.7% were in health service areas
9.6% were in miscellaneous instructional activities
8.6% were in health education instructional areas, including physical development activities
4.2% were in preschool instructional activities
3.4% were in pupil personnel service areas
2.1% were in vocational educational activities
.7% were in special education areas, including speech and hearing therapy and activities for slow learners

TITLE I BASIC PROJECTS IMPLEMENTED DURING FISCAL YEAR 1967

Reported expenditures for basic Title I projects		$32,363,851
Regular school year expenditures	$19,518,315	
Summer expenditures	12,845,536	
Estimated number of participants[1]		214,825
Public school pupils	196,995	
Non-public school pupils	13,860	
Pupils not enrolled (preschoolers, dropouts, etc.)	3,970	
Average cost per participant		$151

Emerging Trends as Seen in Title I Surveys

At the time this report is being prepared--midway through Title I's third year of operation--certain trends appear to be emerging as school personnel have responded with increased awareness and respect for the problems of providing appropriate educational experiences for disadvantaged youth. This included:

- More intense services and activities are being concentrated on fewer disadvantaged children in order to optimize their chances for improved educational achievement and for life success.

- Curricula and services are being tailored to fit the needs of the disadvantaged, contrary to what has so often been true in the past.

- Younger children--particularly ones in the early elementary grades--are being selected more frequently for project participation and programs are gradually shifting away from remediation toward prevention as a more feasible approach.

- Teachers are sharpening their communication skills so that they are better able to reach disadvantaged youth.

- Emphasis in program development has shifted from proposals designed primarily for the procurement of educational resource materials and equipment to more sound types of proposals--ones in which materials and equipment are considered as tools for affecting behavioral changes in children.

- Utilization of supportive personnel, especially teacher aides, is expanding with the result that teachers have more time for working directly with disadvantaged students.

[1]Estimations based on 97 percent return of local evaluation reports.

Public Law 89-313

During fiscal year 1967, sixteen projects were implemented in Ohio--state operated institutions; seven for the mentally retarded, six for the seriously emotionally disturbed, two for the visually handicapped, and one for the deaf. Six of the projects were operated for the entire school year or longer; ten were short-term projects lasting from eight to thirteen weeks.

TITLE I PROJECTS FOR EDUCATIONAL NEEDS OF HANDICAPPED CHILDREN IN STATE-OPERATED INSTITUTIONS

Total reported expenditures		$267,497
For 7 projects for mentally handicapped	$131,503	
For 6 projects for emotionally disturbed	$60,759	
For 1 project for deaf	$39,009	
For 2 projects for visually handicapped	$36,226	
Reported numbers of children receiving district services in one or more projects		2,179
Mentally handicapped	1,497	
Emotionally disturbed	183	
Deaf	249	
Visually handicapped	250	
Average cost per child receiving direct service		$123

Public Law 89-750

Through provisions of the Elementary and Secondary Education Act of 1966, P.L. 89-750, special educational programs for orphaned, neglected, and delinquent children were made possible. Responsibility for state-level administration of this program was vested in the newly organized Special Programs Section of the Division of Federal Assistance in the Ohio Department of Education.

Institutions eligible for the funds provided were the Ohio Soldiers and Sailors Orphans Home at Xenia and five facilities operated by the Ohio Youth Commission--Fairfield School for Boys; Maumee Youth Camp; Scioto Village; Training Center for Youth; and Training Institute, Central Ohio.

Funding occurred so late in the fiscal year that only summer programs were feasible. The Ohio Youth Commission elected to develop an umbrella project with strong emphasis on remedial and developmental reading with supportive activities and services being focused on self-concept improvement and motivation.

TABLE LXVI

TITLE I PROJECTS FOR EDUCATIONAL NEEDS OF ORPHANED, NEGLECTED, AND DELINQUENT CHILDREN IN STATE-OPERATED INSTITUTIONS

Number of agencies eligible for funds		2
Number of agencies implementing projects		2
Total reported expenditures		$104,057
Ohio Youth Commission	$78,582	
Ohio Soldiers and Sailors Orphans Home	$25,475	
Number of children participating		622
Ohio Youth Commission	450	
Ohio Soldiers and Sailors Orphans Home	172	
Average cost per participant		$167

Public Law 89-750

Fiscal year 1967 was a year of transition in Ohio's educational programs for children of migratory agricultural workers. The U. S. Office of Economic Opportunity, which had been providing financial support for such programs, canceled all educational programs for school-age children as of July 1, 1966, leaving the Ohio Department of Education with commitments for which funds were unavailable. Emergency measures were taken so that state funds could be transferred and made available to cover program commitments and to insure the continuation of educational opportunities for migrant youngsters. During the latter half of fiscal year 1967 federal funds were again available through provisions of the Elementary and Secondary Education Act of 1966, P.L. 89-750.

Migrant Children Programs

As a result of the changes in federal funding, the organizational pattern within the Ohio Department of Education changed. The Findlay field office for migrant education was closed and administrative responsibilities were transferred to the Special Programs Section of the Division of Federal Assistance. The migrant program expanded beyond the levels of previous years--more pupils (nearly 3000) were enrolled than ever before, the number of services provided increased, and the quality of education improved.

TABLE LXVII

NON-TITLE I MIGRANT EDUCATIONAL PROGRAMS
IMPLEMENTED FROM JULY THROUGH OCTOBER, 1966

Estimated disbursements to local districts		$71,616
Amounts for instruction	$46,506	
Amounts for transportation	$8,797	
Amounts for food	$6,456	
Amounts for other	$9,857	
Number of school districts involved		17
Reported number of children participating		1,499

TABLE LXVIII

EXPENDITURES FOR FISCAL YEAR 1966 and 1967
TITLE I PROGRAMS IMPLEMENTED IN OHIO

Basic Title I Projects for selected educationally disadvantaged children	$33,813,292	$32,363,851	-1,449,441
Special projects for handicapped children in state institutions	311,432	267,497	-43,935
Special projects for orphaned, neglected, and delinquent children in state institutions		104,057	+104,057
Special projects for children of migratory agricultural workers		146,953	+146,953
TOTAL	$34,124,724	$32,882,358	-1,242,366

Libraries and Instructional Resources

The purpose of Title II of the Elementary and Secondary Education Act of 1965 (P.L. 89-10) is to strengthen and to improve the educational opportunities afforded to children and teachers through the provision of funds for library resources and other instructional materials.

Activities of the Title II staff during fiscal year 1967 included: (1) distribution of funds; (2) project application review and supervision of material acquisition; (3) publication of a guidelines bulletin entitled Bulletin of Information; (4) implementation of four workshops for the purpose of exploring the program and helping schools plan for improved educational opportunities; and (5) provision of field services, including school visitations.

In its two years of existence Title II has, helped to make a marked impact on the educational opportunities provided to the children of Ohio in the following ways:

- The number of elementary libraries has increased.
- The amounts and varieties of materials available in existing school libraries have improved.
- Increased attention is being given to the selection of quality curriculum-related materials.
- Increased attention is being given to organizing library resources and instructional materials for better use.
- Model special collections, which were made possible by Title II special purpose grants, have generated much enthusiasm on the part of school staffs and stimulated interest in procurement of complete, outstanding collections in specified areas of need.

Innovative Projects

Title III of the Elementary and Secondary Education Act of 1965 (P.L. 89-10)--often referred to as PACE, Projects to Advance Creativity in Education--provides funds to local educational agencies for planning imaginative solutions to educational problems, for demonstrating worthwhile innovations in educational practice through exemplary programs, and for supplementing existing programs and facilities through model centers that provide services and/or materials.

The basic purpose of PACE is to narrow the gap between current educational research and existing practices in schools.

Beginning with fiscal year 1966, Title III was administered directly from the U. S. Office of Education. At the state level, the Division of Federal Assistance of the Ohio Department of Education acted as liaison and in an advisory capacity. Determination of which projects were to be funded was at the federal level and grant awards were made by the U. S. Commissioner of Education.

TABLE LXXIII

TITLE III PROJECTS AND GRANT AWARDS APPROVED FOR LOCAL EDUCATIONAL AGENCIES IN OHIO

Projects Grant Awards	Fiscal Year 1966	Fiscal Year 1967	Totals
New projects approved	27	87	114
Grant awards, plus supplements to on-going projects	$2,038,940	$8,191,867	$10,230,807

Strengthening of State Department

The purpose of Title V of the Elementary and Secondary Education Act of 1965 is to stimulate and assist states in strengthening the leadership resources of their state educational agencies and to assist these agencies in the establishment and improvement of programs to identify and meet the needs of state departments of education.

Title V activities undertaken by the Ohio Department of Education during fiscal year 1967, and for which a total of $796,965 was expended, were divided into the three areas outlined below:

I. Expansion, development, and strengthening the leadership roles and consultative services of the Ohio Department of Education to local educational agencies $521,529

- Twenty-six professional and eleven clerical staff members were employed. Areas of responsibility for professional staff members were as follows:

Title III, ESEA	1
Title VI, ESEA	1
Elementary education	4
Secondary education	3
Physical education	2
Art education	1
Mentally retarded	1
Hearing handicapped	1
Audio-visual services	1
Pupil psychological services	1
School district organization	2
School plant facilities	2
Pupil transportation	2
School lunch	2
School finance	1
Teacher training programs	1

- Supportive services, including travel allowances, were provided for the above personnel.

- Salary increase adjustments were provided for thirty-six existing professional staff positions.

- Thirty-four publications were developed or revised for dissemination to local educational agencies.

- A major study of elementary physical education was initiated.

- A study on student-teaching activities was completed.

II. Development and expansion of supportive services within the Ohio Department of Education $ 52,138

- A new unit was initiated in the area of graphic arts and publications. Three positions--two professional and one clerical--were filled.

- A new unit was initiated in the area of research. Two positions--one professional and one clerical--were filled.

- One business-management professional was employed.

- Two seminars were conducted, one relative to the problems of urban education and one for the entire professional staff of the department.

- Thirty-seven members of the professional staff visited exemplary programs outside Ohio or attended national meetings.

- Equipment was purchased to facilitate the increased demands made upon the department to disseminate information.

III. Development of data processing center and statewide studies of specific aspects of education in Ohio $223,298

- The second-year phase of a study of school-district organization and financing of education was completed.

- A study of "Planning, Programming, and Budgeting for Local Educational Agencies" was initiated.

- The installation of a data processing center, which was begun in fiscal year 1966, was completed.

- The data processing center was made operative. Five additional professional and four clerical positions were filled.

TOTAL TITLE V EXPENDITURES IN OHIO IN FISCAL YEAR 1967 $796,965

Economic Opportunity Act

During fiscal year 1966, Adult Basic Education programs in Ohio were funded under Title II-B of the Economic Opportunity Act of 1964 (P.L. 88-452). Fiscal year 1967 was a year of transition, one in which funding was transferred to P.L. 89-750--the Elementary and Secondary Education Act of 1966. Because this change had been anticipated for some time, responsibility for state administration of A.B.E. programs, as Adult Basic Education programs are frequently called, was assigned to the Title I section of the Division of Federal Assistance in January, 1966.

Responsibilities of the Special Programs Section during the interim period--fiscal year 1967--included administering A.B.E. programs according to the state plan approved under Title II-B and developing a new state plan. Basic principles underlying the Title II-B plan included:

- Qualified students had to be 18 years of age or older and have less than an eighth-grade education or its functional equivalency.

- The target population from which qualified students were to be drawn included unemployed workers, underemployed workers, welfare recipients, and heads of families.

- Students enrolled were not to be charged tuition, fees, or other charges or required to purchase books or other materials.

- Communication and computation skills (reading, writing, speaking, listening, and arithmetic) were to be stressed. Adult experiences such as consumer economics, family relations, community activities, and homemaking were to be interwoven into programs.

- Cooperation at the local level with other community agencies--e.g., health, welfare, Community Action--was encouraged.

- On a statewide basis, no more than ninety percent of the cost of all A.B.E. programs could be paid with federal funds. Ten percent or more had to be paid from local or state funds. In fiscal year 1967, all such funds were from local sources. New legislation, however, makes state funds available for matching purposes in fiscal year 1968.

Highlights for fiscal year 1967 included:

- Funding of thirty-three basic instructional programs compared with twenty-five programs in fiscal year 1966.

- Funding of four pilot projects: a summer project in Columbus City; a county-wide project in Pike County--an Appalachia area; a project in Henry County for migrant laborers; and a project in Lorain City for Spanish-speaking people, predominately Puerto Ricans.

- Sponsoring of a three-week workshop at Ohio State University in Adult Basic Education programs and a two-week counselor-training seminar at Akron University.

- Development of a new state plan, which was approved by both the Ohio State Board of Education and U. S. Commissioner of Education.

Elementary and Secondary Education Act

Summary for Fiscal 1967

A summation of ESEA in Ohio, fiscal year 1967, by Titles is as follows:

TITLE I (P.L. 89-10 as amended)		
For 834 basic projects to meet needs of selected educationally disadvantaged children	$32,363,851	
For 16 special projects to meet educational needs of mentally retarded, emotionally disturbed, deaf, and visually handicapped children in state-operated institutions	267,497	
For 2 special projects to meet educational needs of orphaned, neglected, and delinquent children in state-operated institutions	104,057	
For 17 special projects to meet educational needs of children of migratory agricultural workers	146,953	
For state administration of Title I	247,004	
Reported expenditures for Title I as amended		$33,129,362
TITLE II (P.L. 89-10)		
For 706 basic grants for library resources, textbooks, and other instructional materials	4,700,932	
For 18 special purpose grants	535,896	
For state-level administration of Title II	111,224	
For local-level administrative costs	103,303	
Reported expenditures for Title II		5,451,355
TITLE III (P.L. 89-10)		
For 63 planning and operational grants plus supplements approved for FY 1966 projects	7,657,796	
For 24 mini-grants ($25,000 or less each)	534,071	
Total Title III grants and supplements		8,191,867
TITLE V (P.L. 89-10)		
For strengthening Ohio Department of Education resources		796,965
ADULT BASIC EDUCATION (P.L. 89-750)		
For 33 adult basic instructional programs	726,706	
For 4 adult basic pilot programs	45,869	
For state administration of A.B.E. programs	62,193	
Total expenditures for A.B.E. programs		834,768
TOTAL REPORTED EXPENDITURES FOR FISCAL YEAR 1967		$48,404,317

VOCATIONAL REHABILITATION

Ohio Makes Steady Progress

A total of 3698 handicapped Ohioans were restored to gainful employment through the services of the Ohio Bureau of Vocational Rehabilitation during fiscal year 1967 for a 17% gain over fiscal 1966. This percentage of increase represents steady rehabilitation progress in Ohio. The rate of increase is approximately the same as that of the previous year.

Services to Many More

An additional 24,764 were provided one or more services which include guidance and counseling, medical and pyschological examinations, hospitalization and surgery, prosthetics, physical therapy, vocational training and job follow-up.

7,794 were still on the active rolls June 30.

BVR Units in cooperating agencies throughout the state increased to a total of 13. (The establishment of vocational rehabilitation units in mental and correctional units and joint vocational schools began less than two years ago.)

Sixty-four new counselors completed the BVR-Kent State University Rehabilitation Counselor Training Institute.

BVR's Program for the Deaf: One Year of Progress

Concern for the special needs of the deaf in today's society resulted in an extension and improvement project, begun in 1966 by the deaf of Ohio. The program soon became an integral part of Ohio BVR, and one year later the record speaks for itself. 345 were rehabilitated in 1967 as compared with 274 in 1966. Established and still operating under the supervision of Mr. Frank Gattas, the project originally provided one person to work with the deaf. Today there are nine BVR counselors throughout the state, who work with the deaf and hard-of-hearing: five already competent in

manual communication, and four learning the language from the deaf.

These counselors, working with organizations for the deaf, many state agencies, speech and hearing centers, the Division of Special Education and its local school district offices, and the Department of Mental Hygiene and Correction, have increased the rehabilitation program for the deaf, hard of hearing and speech impaired to serve 25.9% more people than last year.

There is still much to be done before this fiscal year ends, those working with the deaf hope to establish a state diagnostic, personal adjustment and work evaluation center in an existing rehab facility to offer BVR services in depth to the deaf.

New Vocational Rehabilitation Programs

Vocational rehabilitation units have been established in thirteen Ohio mental and correctional institutions in recent months. Their purpose is to help the mentally ill, the mentally retarded and prisoners become better adjusted to community life and achieve suitable, gainful employment when they return to society.

Agencies Cooperate

The cooperative plan for this progress was developed under the direction of Martin A. Janis, Director of Mental Hygiene and Correction, and Edward J. Moriarty, Director of the Bureau of Vocational Rehabilitation.

The BVR-DMHC Cooperative program is based on the fact that, properly prepared for a vocation and community living, significant numbers of those with mental and behavioral disorders can become self-sufficient and self-supporting outside the walls of an institution.

Eventually Janis and Moriarty hope to see vocational rehabilitation units in every Ohio mental and correctional institution.

These DMHC facilities have BVR units: Applecreek, Broadview Center, Cleveland Psychiatric Center, Columbus State Hospital, Columbus State School, Dayton State Hospital, Hawthornden State Hospital, Longview State Hospital, Madison Opportunity Village, Mansfield Reformatory for Men, Mansfield Reformatory for Women, Toledo State Hospital and Woodside Receiving Hospital.

Individual BVR counselors are also assigned part-time and full-time to other state and local agency programs.

Federal Funds Help

The present program, which Governor Rhodes hailed in his 1967 State of the State address, will utilize approximately $450,000 of State funds expended by DMHC and $1,350,000 of BVR's federal allotment for fiscal 66-67. The funds are used for case services, necessary building modifications, equipment, and BVR staff.

During the year were additional new referrals		19,435
for a total of		22,682
After providing counseling, diagnosis, and evaluation services to determine eligibility and assess limitations and potentials 13,187 persons were processed through the referral stage.		
Some were determined not eligible for services	6,501	
The majority were accepted for rehabilitation services	6,686	13,187
There were still many on the rolls June 30, 1967, waiting determination of eligibility		9,495
Active Rolls		
All persons who have been determined eligible for rehabilitation services are entered onto active rolls.		
At the beginning of this fiscal year, July 1, 1966, these active cases numbered		5,780
We added those accepted for rehabilitation services		6,686
and total active cases worked with during the year reached a new high		12,466
Some persons for many reasons are not successfully rehabilitated and we must terminate services	974	
The vast majority of persons receiving rehabilitation services are successfully closed as REHABILITATED	3,698	4,672
At the end of the year, "service" rolls containing persons still in the rehabilitation process reached a NEW HIGH		7,794

Sources of Funds

The Bureau is financed on a Federal-State matching basis with Federal funds being expended only to the extent that State matching funds are spent. In fiscal year 1966-67 the matching ratio was 75% Federal and 25% State.

In addition to the regular program, BVR also obtained limited Federal funds to establish private rehabilitation facilities where such private matching funds were available for these purposes.

Federal funds	$5,196,411
State funds	1,732,137
Total funds used in 1967	$6,928,548

State funds include appropriations from General Revenue $952,293 and other funds made available for BVR use in our regular program. Some private rehabilitation facility funds $96,545 were used to establish rehabilitation facilities.

Use of Funds

The largest portion of our funds--89%--was used to provide rehabilitation services for disabled clients.

Most services are purchased from training institutions and medical facilities. Services include: diagnosis and evaluation, physical restoration, training, materials, and to the extent of financial need--occupational tools and equipment, maintenance and transportation.

These purchases comprise the largest single category of expenditures:

Case services	$3,660,553	53%
Counseling services provided by our own staff	2,497,723	36%
Private rehabilitation facilities advanced their funds to the Bureau and we utilized Federal funds of the Bureau to add to these private funds and expand services in those facilities	386,181	6%
A portion went for administrative costs	384,091	5%
Total program cost	$6,928,548	100%

BVR monies were used in various ways to benefit those 28,462 disabled Ohio citizens on our referral or active rolls. An average cost of approximately $243 per case served might better be termed "average investment."

*UNEMPLOYMENT; UNEMPLOYED; *URBAN SLUMS; *EMPLOYMENT PROBLEMS; SUBEMPLOYMENT; INDIVIDUAL CHARACTERISTICS; FAMILY CHARACTERISTICS; POPULATION TRENDS; *SOCIOECONOMIC INFLUENCES; SOCIOECONOMIC BACKGROUND; RACIAL DISTRIBUTION; ETHNIC DISTRIBUTION; HEALTH CONDITIONS; *ECONOMIC DISADVANTAGEMENT; FEDERAL PROGRAMS; OCCUPATIONS; WORK ATTITUDES; MOTIVATION; PROGRAM DESCRIPTIONS

Households in poverty areas of Boston, New York, New Orleans, Philadelphia, Phoenix, St. Louis, San Antonio, San Francisco, and San Juan were surveyed in November 1966 by the Department of Labor to discern the present critical problems of slum residents. Data from this and other related studies were used to describe unemployment in slums, characteristics of slum residents, barriers to employment of slum-dwellers, changing social conditions and population trends, and present and needed programs to better the social and economic conditions of slum residents. Some highlights of this chapter were: (1) The highest unemployment rates were in the Hough area of Cleveland (15.6 percent) and the El Fangito area of San Juan (15.8 percent), (2) Close to 7 percent of the slum residents with jobs were employed only part-time, although they would have preferred full-time work, (3) 70 percent of the slum population is Negro, 10 percent Puerto Rican, 8 percent Mexican-American, and 12 percent from other racial or ethnic groups, (4) Nonwhite workers represented three of every four of the 39,000 unemployed workers in the 10 slum districts surveyed. Their rate of unemployment (9.2 percent) was not significantly higher, however, than the rate for white workers (8.7 percent), and (5) Inability to find jobs was due chiefly to lack of education, training, skills, or experience, according to 44 percent of the unemployed slum residents. Tables and charts are included. (ET)

The President sends to the Congress each year a report on the Nation's manpower as required by the Manpower Development and Training Act of 1962. Published together in that report are the *Manpower Report of the President* and an accompanying comprehensive report by the Department of Labor on manpower requirements, resources, utilization, and training.

This is a reprint of the chapter on Joblessness and Poverty in Urban Slums from the Department of Labor's report.

Information regarding reprints of other sections of the *1967 Manpower Report* may be obtained at the locations listed on the inside back cover.

JOBLESSNESS AND POVERTY IN URBAN SLUMS

The failures of our economy and society in providing equal employment opportunities, adequate education and training, and a decent standard of living for all Americans converge in city slums. The people entrapped in the slums bear the brunt of these failures, but through them the community and the Nation reap the consequences—in wasted human resources, in the smoldering and sometimes explosive bitterness or despair of many slum residents, and in the problems of dependency, crime, and juvenile delinquency to which these conditions inevitably contribute.

An "area impacted by segregation and discrimination; blighted by derelict and dilapidated houses, non-conforming land uses, and uncollected trash; overcrowded by a shortage of low-income housing units, and gouged by too-high rents in code-violating dwellings"[1]—this description refers specifically to the slums in one northern city, but it could be applied to many others.

Living in an area such as this isolates the residents from the mainstream of the city's life and adds immeasurably to the obstacles which stand in the way of their satisfactory employment. Joblessness and irregular or part-time work are several times as frequent among slum residents as in the country generally; many even of those employed full time have earnings below the poverty line; and many others, discouraged by repeated rebuffs, are not even looking for employment. Illness and disability, low levels of education, and frequent dependence on welfare or relief are pervasive problems.

Furthermore, social and economic conditions are getting worse, not better, in slum areas. And they will certainly continue to do so unless strong action is taken to change the face of the slums and provide opportunities for reasonably satisfying, decently paid employment for slum residents.

Set in the midst of surrounding areas of unparalleled affluence, the city slums have not been reached significantly by the national gains in employment and income. There has been some movement of the least disadvantaged people to better neighborhoods, but their place has been taken by a continuing influx of the poor—many of them displaced farmworkers, lacking the education and skills needed for urban jobs. The poorest, most disadvantaged people, including a rising proportion of Negroes, are caught in the slums, without hope of enough earning capacity to escape from poverty. And the tremendous, continuing increase in the Negro teenage population in central cities (over 50 percent in just 5 years, 1960–65) compounds a problem of grave social danger—demanding great expansion of training and work opportunities for these youth, as well as for jobless adults in the slums.

To take a sharper look at the current problems of joblessness and poverty in urban slums, the Department of Labor and cooperating State agencies conducted intensive surveys in a number of areas in November 1966. This chapter first discusses some of the major findings of these surveys, as well as other related data, with regard to the present critical problems of slum residents. It then considers the barriers of inadequate education and lack of skill, distance from available jobs and absence of transportation, frequent health problems and minority group status, and attitudes of apathy or hostility based on lifelong experience of failures and rejections, which must be surmounted if slum residents are to be brought into productive employment. It also outlines the

[1] Statement by the North City Congress of Philadelphia, a federation of groups representing a broad range of community interests.

worsening economic and social situation in slums and the population trends which are intensifying these problems. And finally, it briefly describes the major educational, training, and War on Poverty programs already underway to aid the disadvantaged, and the Model Cities Program to regenerate slum neighborhoods.

All these programs are making indispensable contributions to the elimination of the pockets of poverty within every major city, and all should be continued and strengthened. But the need of slum residents for jobs and a fair share in the country's prosperity remains unmet. The new concentrated attack on unemployment, discussed in the concluding section of the chapter, is addressed to this most urgent, immediate need.

Unemployment and Sub-Employment

About 1 out of every 10 workers in the slums of 13 major cities was unemployed in November 1966—an unemployment rate three times the national average.

This is one of the findings of the special surveys conducted that month by the Department of Labor and cooperating State agencies in poverty areas in eight U.S. cities (Boston, New York, New Orleans, Philadelphia, Phoenix, St. Louis, San Antonio, and San Francisco) and San Juan, P.R. In addition, information on slum areas of Cleveland, Detroit, Los Angeles, and Oakland was obtained from independent studies.[2] In general, the areas covered are among the worst and poorest city slums in the country.

The slums where the unemployment rate was highest of all were the Hough area of Cleveland (15.6 percent) and the El Fangito area of San Juan (15.8 percent). Yet the Cleveland metropolitan area as a whole has had a rate of unemployment below the national average (only 3.5 percent in the year ending August 1966).[3] Unemployment rates for each slum district—together with the much lower rates for the metropolitan areas, where these are available—are shown in table 1.

Data on unemployment, as conventionally measured, are a partial indication of the whole complex of work problems which contribute to poverty in the slums. Many more slum residents have only part-time jobs, are earning too little to meet their own and their families' minimum subsistence needs, or are outside the labor force (though able to work) than are unemployed, in the sense that they are jobless and looking for work.

The following findings regarding the 800,000 persons of working age in areas covered by the Department's November surveys make this plain:[4]

—Close to 7 percent of the slum residents with jobs were employed only part time, although they would have preferred full-time work. (The comparable figure for the Nation as a whole was then 2.3 percent.)

—One out of every 5 of those working full time earned less than $60 a week, the equivalent on an annual basis of the poverty-line income figure of approximately $3,000 for a family of four. And nearly two-fifths of the slum area families (and unrelated individuals) reported annual incomes under $3,000, compared with one-fourth in the United States as a whole.

—A disproportionately large number of slum residents of working age were neither working nor looking for work, and so were not count-

[2] The study in Detroit was conducted by Wayne State University for the Michigan State Employment Commission, and the Oakland study by the University of California; both were approximately concurrent with the other surveys. The studies in Cleveland and Los Angeles were made by the Bureau of the Census during 1965, but the information obtained was judged to be generally representative of the current situation in these cities' slum areas.

In addition to the survey findings, some of the material in this chapter is based on reports prepared by representatives of the Secretary of Labor who visited each of the cities.

[3] These comparisons may understate the differences in unemployment between slum residents and the total working population of their metropolitan area, because of the difference in time periods involved. The average national rate of unemployment was higher during this year than at the time of the slum surveys in November 1966 (4.0 percent compared with 3.7 percent).

[4] Unless otherwise indicated, all findings from the slum surveys presented here and in the remainder of this chapter relate to the 10 areas in continental U.S. cities surveyed jointly by the Department of Labor and State Employment Service agencies—three in New York, and one each in the seven other cities.

These surveys involved interviews with a sample of households. Statements on the sampling and response errors are scheduled to be published in early 1967.

ed in the labor force (even though some were not looking because of their conviction, right or wrong, that they could not find a job). This labor force "nonparticipation rate" was 11 percent among men 20 to 64, compared with only 7 percent in the country generally.

—Finally, a fifth or more of the adult men expected to be part of the population of these slum areas were not located by the November surveys. This finding parallels the Census "undercount" experience for nonwhite men. The exact circumstances and facts regarding this situation are not yet fully explored or identified.

TABLE 1. UNEMPLOYMENT RATES FOR SLUM AREAS AND FOR METROPOLITAN AREAS AS A WHOLE[1]

Metropolitan area and slum area	Unemployment rate	
	Slum area, November 1966	Metropolitan area, average for year ending August 1966
Boston—Roxbury area	6.9	3.7
Cleveland—Hough and surrounding neighborhood	15.6	3.5
Detroit—Central Woodward area	10.1	4.3
Los Angeles—South Los Angeles	12.0	6.0
New Orleans—Several contiguous areas	10.0	(2)
New York:		
Harlem	8.1	4.6
East Harlem	9.0	
Bedford-Stuyvesant	6.2	
Philadelphia—North Philadelphia	11.0	4.3
Phoenix—Salt River Bed area	13.2	(2)
St. Louis—North Side	12.9	4.5
San Antonio—East and West sides	8.1	(2)
San Francisco-Oakland:		
San Francisco—Mission-Fillmore	11.1	5.2
Oakland—Bayside	13.0	
San Juan—El Fangito	15.8	(2)

[1] Metropolitan area data are based on special tabulations of data from the Current Population Survey. For source of slum area data, see adjoining text.

[2] Data not available from the Current Population Survey.

As a first approach to measuring the entire area of joblessness and employment hardship, a "sub-employment" index has been constructed, based on these survey findings and other data and on a number of carefully considered estimates and assumptions.[5]

The average rate of sub-employment arrived at for the 10 slums surveyed was 34 percent. In other words, one out of every three slum residents who was already a worker, or should and could become one with suitable help, was either jobless or not earning enough for living above the poverty level.

Sub-employment rates for each area are shown in chart 12 and in the following tabulation:

Area	*Sub-employment rate*
Boston—Roxbury area	24
New Orleans—several contiguous areas	45
New York:	
Harlem	29
East Harlem	33
Bedford-Stuyvesant	28
Philadelphia—North Philadelphia	34
Phoenix—Salt River Bed area	42
St. Louis—North side	39
San Antonio—East and West sides	47
San Francisco—Mission-Fillmore	25

[5] The "sub-employment" concept and index include:

1. People classed as unemployed, since they were jobless and looking for work during the survey week;
2. Those working only part time though they wanted full-time work;
3. Heads of households under 65 years of age who earn less than $60 a week though working full time; also individuals under 65, not heads of households, who earn less than $56 a week on a full-time job (the equivalent of $1.40 an hour for a 40-hour week);
4. Half the number of "nonparticipants" among men aged 20 to 64 (on the assumption that the other half are not potential workers, chiefly because of physical or mental disabilities or severe personal problems); and
5. An estimate of the male "undercount" group (based on the assumption that the number of men in the area should bear the same relation to the number of women that exists in the population generally; also that half of the unfound men are in the four groups of sub-employed people just listed—the others being either employed or not potential workers).

The composite rate is, of course, affected by the yardstick used for each of the five elements in the index. For example, if low-wage part-time workers who said they did not want full-time work had been included in the low-income group (group 3), the resulting sub-employment rate would have been somewhat higher; if nonheads of households had been excluded from group 3 entirely, the overall sub-employment rate would have been about 4 percentage points lower. Although slightly different criteria might, of course, have been used for any of the five elements, those chosen are regarded as reasonable and probably conservative.

RACIAL AND ETHNIC BACKGROUND

Most of the people living in these areas of deep poverty are Negroes or members of other minority groups. In the 10 surveyed areas taken together, 70 percent of the population is Negro, 10 percent Puerto Rican, 8 percent Mexican American, and 12 percent from other racial or ethnic groups.

The proportion of Negroes in the population of these slums is much greater than their representation among all of the Nation's poor—of whom only a third are nonwhite. Disadvantaged Negroes are concentrated in ghetto areas to a much greater extent than the white poor, who outnumber them in central cities as a whole and even more in outside areas (as shown in table 2).

Nevertheless, practically every city slum has large numbers of white residents. Puerto Ricans predominate in East Harlem and are numerous in Harlem proper and other New York slums. Mexican Americans are by far the largest group

CHART 12

One-third of all slum residents who are or should be workers are sub-employed.

TABLE 2. POOR PEOPLE LIVING IN AND OUTSIDE CENTRAL CITIES, BY COLOR, 1964

[Numbers in millions]

Residence	All persons	White	Nonwhite
Total, number	34.3	23.6	10.6
Metropolitan area	16.4	10.7	5.5
Central city	10.1	5.6	4.4
Outside central city	6.3	5.1	1.1
Outside metropolitan area	17.9	12.8	5.0
Nonfarm	13.5	9.8	3.7
Farm	4.4	3.0	1.3
Total, percent	100.0	100.0	100.0
Metropolitan area	47.8	45.6	52.5
Central city	29.4	23.8	41.7
Outside central city	18.4	21.8	10.8
Outside metropolitan area	52.2	54.4	47.6
Nonfarm	39.5	41.5	35.1
Farm	12.7	12.9	12.5

NOTE: Detail may not add to totals due to rounding.

SOURCE: Mollie Orshansky, "The Poor in City and Suburb, 1965," *Social Security Bulletin*, December 1966, pp. 22-37.

of slum residents in San Antonio, and many live in poverty areas in southern California cities and in Phoenix, Ariz. There are contingents of white, former farmworkers in the St. Louis slums, and of Central and South Americans in San Francisco.

Real intermixture of these various population groups is rare, however. More often, they live in clusters with people of the same background, within a broader slum area.

FAMILY STRUCTURE

The proportion of households headed by women is high in many slum districts—contributing significantly to low family incomes.

Nearly two-fifths of all households in the surveyed areas (including one-person households) had women heads. This was almost twice the national figure. The proportion of women widowed, divorced, or absent from their husbands was also much above the national average—1 out of 3, compared with only 1 out of 5 in the total population.

The absence of a male breadwinner in many households had a clear effect in terms of low family income. Nearly three-fifths of the households with women heads had annual incomes of under $3,000, compared with less than two-fifths of all the households in these slums. No matter how hard these women work, their potential earning capacity is generally too low to lift themselves and their families above the poverty line.

The large size of many families in slums also needs emphasis, because of its critical relationship to poverty and the measures required to escape from it. Sixteen percent of the families in these most impoverished areas of the Nation had six or more members, half again as high a proportion as in the country generally (11 percent).

THE UNEMPLOYED

Nonwhite workers represented 3 out of every 4 of the 39,000 unemployed workers in the 10 slum districts surveyed in November 1966. Their rate of unemployment (9.2 percent) was not significantly higher, however, than the rate for white workers (8.7 percent).

This finding is contrary to the situation in the country generally, where Negroes have twice as high an unemployment rate as whites. It makes evident the heavily disadvantaged position of the white people—many of them members of ethnic minority groups—as well as of the nonwhites in these slums. The handicaps of inadequate education and lack of skill, of prevalent disabilities and police records (discussed below) weigh heavily on both the white and the Negro workers.

Teenagers (16 to 19 years old) had an average unemployment rate of 28 percent in these slums—four times the rate (6.8 percent) for workers aged 20 and over. Separate unemployment figures for white and Negro youth are not available from these surveys. But another study of poverty areas shows that nonwhite youth have by far the highest unemployment rate of all.

The unemployment rate was 46 percent for nonwhite girls and 31 percent for nonwhite boys aged 14 to 19 in poverty areas of the country's major cities in March 1966. Unemployment rates for white teenagers in these areas, though by no means

satisfactory, were much lower (10 percent for girls and 20 percent for boys).[6]

Adult women also had inordinately high rates of joblessness. Those 20 to 64 had an unemployment rate (8.7 percent) far above that for men in this age group (5.4 percent). This difference was much greater than the difference between the national unemployment rates for men and women—2.7 and 3.8 percent—adding urgency to the job-finding problems of women in slum areas.

Barriers to Employment and Satisfactory Jobs

Unemployed workers in slums regard their inability to find jobs as due chiefly to lack of education, training, skills, or experience. By far the largest group of jobless workers in the areas covered by the November surveys (44 percent) cited inadequacies of these kinds as the "principal reason" for their unemployment.

The other reasons for unemployment given by these workers were as follows:

—17 percent considered that they were either too young or too old to qualify for jobs.

—17 percent said that no jobs were available.

—6 percent identified health problems as mainly responsible.

—4 percent reported "police records" or "bad debts."

—1 percent referred to transportation problems.

—And 11 percent cited a variety of other factors or showed no understanding of the reasons.

The personal circumstances and characteristics of the individuals involved are clearly crucial elements in the job-finding problems of a majority of the unemployed slum residents. But job market factors—notably, the number, kind, and location of available job openings—are additional sources of difficulty, not always perceived by the workers involved. The substandard wage rates paid for many unskilled laboring and service jobs also contribute greatly to sub-employment. A significant number of women who want and need jobs are prevented from seeking them by lack of child-care facilities. And a complex of social, psychological, and economic factors, which are only beginning to be explored, contribute to the high proportion of adult men in slums who are outside the labor force or missed by the household surveys.

The chief personal and job market factors which prevent a large number of slum residents from getting jobs at decent wages—or often, any job at all—are discussed in following sections. Some of the deep-rooted social and psychological problems which will have to be taken into account in any effective answer to the potentially explosive situation in these large sectors of the country's major cities are also indicated.

EDUCATIONAL PROBLEMS

Inadequate and inferior education is obviously one of the major elements in the total sub-employment problem among slum residents. It largely explains the high proportion of employed workers in these areas who are in low-skilled, low-paid jobs. And it is directly related to their unemployment rates. Among the slum residents who were high school graduates, the rate of unemployment was 8 percent, according to the November surveys, compared with 11 percent for workers without a high school education.

In hiring workers, employers now require high school diplomas not only for most white-collar jobs but for apprenticeships in skilled trades and often for service and semiskilled jobs, where this level of education may have little relevance to the tasks performed.

Faced with such hiring specifications, slum residents have great handicaps. Only a third of the unemployed slum residents were high school gradu-

[6] Relates to "poverty" areas, as defined by the Census Bureau for the Office of Economic Opportunity, which include about 20 percent of the census tracts in large Standard Metropolitan Statistical Areas. The total number of people aged 14 years and over in all poverty areas of SMSA's with 250,000 or more population (in 1960) was over 12 million in March 1966. It is estimated that about 30 percent of the persons in poverty areas had incomes below the poverty level.

For a description of this study and its other findings, see James R. Wetzel and Susan Holland, "Poverty Areas of Our Major Cities," *Monthly Labor Review*, October 1966, pp. 1105–1110.

ates. And more than 1 out of every 4 had only an eighth-grade education or less—often much less.

These overall figures are just the beginning of the story. Puerto Ricans and Mexican Americans were the groups with by far the greatest educational disadvantages. In Harlem, for example, over two-fifths of the Puerto Rican unemployed had at best reached the eighth grade in school, compared with less than one-fifth of all the unemployed workers in that predominantly Negro area. Still worse off were the Mexican unemployed in Phoenix (of whom 3 out of every 5 had never gone beyond the eighth grade) and in San Antonio (where half had no more than an eighth-grade education and close to 1 out of every 5 had only 4 years or less of school).

Deficiencies in educational opportunities are still extreme among young people in slum areas, in northern and western as well as southern cities. According to the Governor's Commission on the Los Angeles Riots, the citywide school dropout rate for former ninth-grade students there was 30 percent in 1965; but in three predominantly Negro high schools in south central Los Angeles, two-thirds of the student body dropped out before graduation.

Overcrowding and double sessions, prevalent in the schools in Watts and other poverty areas of Los Angeles, are among the factors contributing to this record of educational failure. Over three-fourths of the 26,200 students on double session in the city schools in 1965 were in schools with predominantly Negro or Mexican American enrollments. Furthermore, these schools generally lacked cafeterias, and none of the Los Angeles schools provide free or reduced-price lunches for needy children, whose school progress might be aided by better nourishment. Schools in the city's poverty areas often lack libraries. And, on the average, teachers in these schools are less experienced than in the city school system as a whole.

Even in New York City slum areas, where the average educational attainment of residents is considerably higher than in most of the other slum areas surveyed, there are pockets of severe educational deficiency. For example, a recent report on students in two junior high schools in Harlem showed that roughly two-thirds of the students enrolled in the ninth grade failed to graduate from high school.

There is no senior high school in all of central Harlem, although there are 20 elementary schools and four junior high schools in the district. Thus, Harlem youth lack the stimulus to continued education which would be provided by having a high school and its students in their midst; if they wish to attend high school, they have to commute to another section of the city. The College of the City of New York is now contemplating the opening of collegiate facilities in Harlem, at the junior college level to start with, as a way of illustrating opportunities and motivating youngsters to go on to higher education.

It is important to recognize also that the low proportion of high school graduates among slum residents is no full measure of their educational deprivation. The gap between years of school completed and actual level of educational achievement is very great among the racial and other ethnic groups which make up a large proportion of the slum population, according to a nationwide study sponsored by the U.S. Office of Education, covering some 4,000 schools and 645,000 children.[7] Minority group children have a serious educational deficiency when they start school; the gap between their achievement and that of more privileged children is even wider when they leave. The average 12th-grade Negro in metropolitan areas achieves scores in mathematics that equal the average for seventh- or eighth-grade students in the country as a whole, and the record in reading is only moderately better.

The greatest failure of the slum schools has been the fact that they have not provided disadvantaged youngsters with programs specifically adapted to their needs. As the Governor's Commission in California said: "The same educational program for children of unequal background does not provide an equal opportunity for children to learn."

HEALTH PROBLEMS

Health problems are more widespread and health standards much lower in slum areas than in more affluent sections of cities and the country generally. How much of the sub-employment of slum residents is traceable to chronic health problems and disabilities cannot be estimated precisely,

[7] *Equality of Educational Opportunity* (Washington: U.S. Department of Health, Education, and Welfare, 1966), pp. 1–33.

CHART 13

Proportion of men unable to work is highest in poverty areas and among nonwhites.

Note: Data are for Standard Metropolitan Statistical Areas with 1960 population of 250,000 or more.

Source: U.S. Department of Labor.

but probably around 10 to 20 percent of the individuals involved have such problems.

Of the slum residents who were jobless and seeking work, 6 percent considered health problems the main reason for their unemployment. And the proportion of men with disabilities so great that they are unable to work is much higher in poverty than nonpoverty areas (according to data for all large metropolitan areas shown in chart 13). This proportion is considerably higher among Negro than white men (in both poverty and other areas). Negroes not only suffer the most from inadequate health care, poor nutrition, and poor living conditions, but can less often qualify for white-collar and other jobs suitable for workers with limited physical disabilities.

The above-average frequency and severity of health problems among slum residents is shown also by many other indicators. The incidence of tuberculosis and venereal disease, for example, is higher in slums than elsewhere. In Los Angeles slum areas, the venereal disease rate is four times the county average, the TB rate double that for the county. And in St. Louis, the incidence of venereal disease is much higher in both white and Negro slum neighborhoods than in the city as a whole.

Undoubtedly the overcrowded housing and poor physical environment of the slums (e.g., the presence of refuse and rats) contribute to these and other differences in disease rates. The poverty of the average resident also limits his diet and makes him unable to pay for adequate health services. And despite the high incidence of illness and disability among them, slum residents conspicuously lack adequate medical services and hospital facilities, public or private.

In Watts, for example, 20 physicians serve 150,000 residents as well as people from other areas—an average of 1 physician, part time, for every 7,500 persons. Residents of a southwestern poverty area complained that accident victims had no access to immediate medical assistance—there was no provision in the community for medical emergencies. In East Harlem, health clinics located in a public project are reported grossly understaffed.

A substantial beginning in improving the health services available to poor people, including slum residents, has been made in the past 2 years.[8] But there is still great need for education in health care, for further improvements in public health services and in sanitation, and for expansion of vocational rehabilitation services. Much-increased hospital facilities in slum areas are also vital to the health of these people and their ability to rise out of poverty.

ARRANGEMENTS FOR CHILD CARE

The availability of good child-care facilities is extremely important to the slum family whose income is, in whole or in part, dependent on the earnings of the mother. Many women with small children need to work to supplement the inadequate earnings of the family head; many more are themselves family heads who must work to support themselves and their children.

That lack of adequate child-care facilities is a serious barrier to employment of women in slum areas who want and need to work is one of the findings of the November surveys. Almost 1 out of every 5 of the slum residents who were not in the labor force but wanted a regular job gave inability to arrange for child care as the principal reason for not looking for work.

The President in his 1967 message to Congress on America's Children and Youth pointed out that, while the Federal Government and the States support a wide range of services for needy children and their parents, these efforts have fallen short in many ways. He listed day care for children under 3 years old as among the services needed. Such facilities are to be provided through a pilot program of child and parent centers, conducted by Community Action agencies in areas of acute poverty.

A greatly expanded day-care program for preschool children would not only permit more mothers in slum areas to get jobs they greatly need for financial reasons but would also be of inestimable help to many now working and to their children. Often, these mothers are forced to leave young children in the care of elderly relatives or babysitters during their most impressionable years. In one southwestern slum area, it has become usual practice for working mothers to keep older children home from school on alternate days to care for younger ones. Night-shift work—for example, as charwoman or in a bakery—is also resorted to by some slum mothers who do not want to leave youngsters unattended during the day.

Furthermore, many working mothers from poor families have to find private household or other jobs where they can bring their children with them. According to a national survey cosponsored by the Children's Bureau of the Department of Health, Education, and Welfare and the Women's Bureau of the Department of Labor, one out of every five working mothers from families with an income of less than $3,000 was attempting to combine looking after her children with work at her job. (In higher income families, the proportion was, of course, much lower.)

The findings of this survey also reflect the great scarcity of day-care centers. Only 3 percent of the working mothers were using group-care arrangements for their children.

OCCUPATIONS OF SLUM RESIDENTS AND AVAILABLE JOBS

Slum residents who have jobs are employed mostly in low-paid, low-status, low-skilled occupations. And when they are unemployed, their

[8] For a discussion of Federal programs to remove the financial barriers to health care, see "Federal Health Programs," *Special Analyses, Bureau of the Budget of the United States, Fiscal Year 1968* (Washington: Bureau of the Budget, January 1967), pp. 110–122.

job possibilities are generally limited to such occupations—because of their lack of education, training, and skill.

In the slum areas covered by the November surveys, almost half of all currently employed persons were in laboring and service jobs, only a fourth in white-collar work. In one area, the proportion in laboring and service occupations was nearly 60 percent, and in no area did it fall below 40 percent. Similarly, almost half of the unemployed workers had last worked in a laboring or service job, and less than a fifth of them had held white-collar jobs. Another fifth had never worked in any civilian job.

For the many men in slums who are qualified only as laborers, the employment outlook is bleak. Employment in such jobs is declining relative to total employment in the United States. Opportunities in other blue-collar jobs are also growing much less rapidly than white-collar employment.

In service occupations, on the other hand, employment is expanding—offering more opportunities for slum residents, although all too often in the least attractive jobs.

A comparison of citywide data on job vacancies with the occupational background of the unemployed slum residents emphasizes the disparities between the two. In almost every city surveyed, 40 to 50 percent of the unfilled jobs were in white-collar occupations. But only about 15 percent of the unemployed in the slum areas covered by the survey were white-collar workers. And openings were relatively few in the service, laborer, and operative jobs for which slum residents are most likely to be qualified.

That most unemployed slum residents do not have the occupational background called for by most present job openings is also shown by data for the Philadelphia metropolitan area. This area covers an extremely large territory, includes several slum districts, and has many sections which are inaccessible to the slum residents. There were less than 900 vacancies for laborers in the entire Philadelphia metropolitan area in November 1966. But there were then 800 unemployed laborers in the North Philadelphia slums alone.

The following percent distributions compare the last occupations of the unemployed workers in this slum district with the occupational vacancy pattern for the metropolitan area:

Occupation	*Percent distribution*	
	Slum unemployed	*Areawide job vacancies*
Total	100	100
White collar	15	38
Craftsmen	3	22
Operatives	11	21
Laborers	26	6
Service	23	13
Never worked	22	--

Much the same situation is shown by comparative data on job vacancies for the New York City area and the occupational background of the unemployed in the Harlem, East Harlem, and Bedford-Stuyvesant slums. The findings emphasize the need for training, remedial education, and special placement and other services for slum residents if they are to qualify for the available jobs.

WORK ATTITUDES AND MOTIVATION

The significance of joblessness and of low-status, blind-alley employment to slum residents can be understood only in the context of the high value placed upon work by our society as the acceptable means of making a living and achieving success and social status. Preparing for work, getting a job, and moving up occupational ladders to better paying jobs are matters of crucial importance. For most people the way to a more affluent and satisfying life is through meaningful work. But this way is all but closed to many slum residents.

While too little is yet known regarding the effects of slum life and environment upon the aspirations and motivations of slum residents, scattered studies indicate a serious gap between their aspirations and opportunities for realizing them.

Thus, the attitudes of some slum residents toward jobs and their work adjustment problems may arise not so much from the level of aspirations as from the frustrations experienced in efforts to achieve them. In many cases the slum youth gets little or no help from the schools, where efforts have frequently been directed at encouraging him to be realistic—to aspire to, or accept, the very types of low-income, low-prestige jobs from which he hopes to escape. He may reluctantly accept an occupational goal far below his

previous desires, and perhaps well below his potential. In some cases he settles for a life of marginal employment, interspersed with long periods of joblessness. His choice is not made voluntarily in a context of numerous choices available to him—it is forced upon him, and the consequences will have harsh, impersonal, and unwanted effects on his future and the future of his family. He may reject work as a means of achieving his aspirations and substitute other means, such as illicit activity, or he may, in despair, give up both his goals and the means of achieving them and succumb to drug addiction, alcoholism, or vagrancy, or reject both goals and means through rebellion.[9]

Attitudes Toward Low-Paid Menial Jobs

Some unemployed slum residents hold out for jobs with a fair promise of lifting them out of poverty—jobs that pay enough to support their families. This was clear to Secretary of Labor representatives who visited the areas surveyed.

Jobs paying $1.25 to $1.50 an hour are likely to be rejected in some areas except on a short-term basis and when family and personal need is great. They are regarded only as a means of providing the minimum essentials for survival. This attitude is rooted in the knowledge that such jobs offer no more—and often less—for the present or the future than dependence on welfare, or "hustling."

The status which attaches to jobs is also important. White-collar or blue-collar jobs with companies of standing in the community may be accepted at lower wages than jobs as dishwashers, custodians, or janitors. When society places a low value on a job, in terms of pay and prestige, the slum resident is in complete agreement.

Attitudes Toward Welfare Payments

Dependency is virtually imposed on a good many slum residents. Lack of meaningful job opportunities that provide an adequate income reinforces a belief that it is futile to strive—a belief that often becomes irreversible. The sizable proportion of slum residents who live on welfare payments is a hard fact of slum life—both an influence on and a result of the complex pressures operating in the slums.

[9] Robert K. Merton, *Social Theory and Social Structure* (New York: The Free Press of Glencoe, Inc., 1957), pp. 131–160.

In East Harlem, for example, 45,000 persons, or 30 percent of the population, live on welfare payments, according to information obtained by the Secretary's representatives in November 1966. In the Watts area of Los Angeles, 30 percent of the population (94,000 persons) are welfare recipients. Roughly 40 percent of Bedford-Stuyvesant's children and 25 percent of its adults receive welfare payments. The monthly welfare check, most often to mothers with dependent children, becomes a source of security to be weighed long and carefully against the probable insecurity and irregularity of a paycheck for low-paid, low-skilled work. The paychecks for that kind of work, which is usually the only kind available, are often less than the welfare check (even without any allowance for the many extra costs involved in working). And the risk that even these low wages may suddenly cease with the job may be too great for many mothers to take.

Illicit Activity

Among youth, frustration and disillusionment can result in anger as well as despair. This may find expression in a host of ways—refusal to go to school or to work, organized gang activities, or illicit activity. While most young people in poverty areas grow up without regular or continuing delinquent behavior, the deprivations of slum life and environment undoubtedly increase the odds against a child's developing acceptable standards of social behavior.

The struggle for survival in the slums sometimes takes the form of so-called "hustling," which may be a mixture of legitimate, illicit, or borderline activities. Sporadic work for companies which take on "extras"—to deliver, pack, and unload goods or to wait on tables and clean up at banquets, for example—may be interspersed with playing or selling "numbers," gambling, car stripping, shoplifting, and other petty thefts and, less frequently but more seriously, with narcotics pushing, car theft, or armed robbery. The disparity between economic, social, and personal aspirations and opportunities for achieving them all too often brings a sense of failure, loss of self-esteem, despair, anger, and desire for revenge.

The isolation or alienation of slum residents from the values and standards of the larger community and the feeling of powerlessness rooted in

frustration inevitably influence both work attitudes and motivation. The condition of the poor in the slums, and of those around them, "prove to them how generally useless it is for them to try to move into more socially desirable and materially rewarding positions in society." [10]

These attitudes of hopelessness and frustration emphasize the urgent need for action. They point out clearly, also, the difficulties to be met in bringing slum residents into the main current of social and economic life. Above all, they underline the potentially dangerous situation in city after city, which makes action imperative.

POLICE AND BAD DEBT RECORDS

A police record, whether for arrest or conviction, a record of bad debts or of garnishment, represent a barrier to employment for a significant number of slum residents. Many employers refuse to consider hiring anyone with such a record. Once convicted of any offense or even arrested and subsequently released, a worker has greatly increased difficulty in getting a job.

Records of arrests, garnishments, or troubles in previous jobs were the major barrier to employment for about 1 out of every 10 unemployed job applicants in slum areas, according to a special analysis made by the Employment Service in seven slum areas in late 1966.

A survey of male applicants for Federal Civil Service laboring jobs in Washington, D.C., yields similar results. Ten percent of these men, half of them under 26 years old, thought police and other bad records their greatest barrier to finding a job. Two out of 3 had been arrested for or charged with breaking the law, and 9 out of 10 of these had been found guilty of a charge.

All too frequently, employers' failure to distinguish between arrest and conviction, and between petty and more serious offenses, unduly penalizes the innocent and some youthful offenders. The rapidly growing numbers of teenagers in slums thus have an added hurdle to overcome if they are ever arrested.

Efforts to ease the return of offenders and of prisoners to jobs and normal life outside of correctional institutions are being made, however, and with some success. The new training and vocational rehabilitation programs for prison inmates, together with the work-release programs and the halfway houses or way stations for former prisoners authorized by recent legislation, are all important forward steps.[11] But the process of rehabilitation is not a quick and easy one for either youth or adults who have grown up in the slums, often without experience of regular jobs and their requirements and with established patterns of antisocial behavior. Success in the readjustment of these individuals depends on initial remedial work, persuading employers to hire them, and then extended followup work.

An experimental MDTA project with young ex-offenders illustrates both the possibilities of getting jobs for these youth and the difficulties involved. One group in the project received special vocational and remedial training, while a control group did not. The special preparation gave the young people in the experimental group more confidence. And with the aid of job development staff working with employers, they obtained better jobs than the unprepared and unaided control group. More than a fourth of the employers who hired the trainees indicated that they did so only because of the efforts of the job placement personnel.

Once on the job, however, work adjustment proved difficult for many members of the experimental group. These ex-offenders, in competition for the first time with workers from a different cultural background, were sometimes unable to adjust. Tardiness, absenteeism, and uncooperative behavior were frequent problems. And almost three-fifths of the group were dismissed from their jobs. Clearly, the assistance given these youth should have been continued beyond their initial placement, with followup on the job and additional training if needed.

Assistance in obtaining bonding is another essential aid for ex-offenders. Bonds are being required by employers for workers in more and more jobs involving some responsibility for property—even for some janitorial and delivery jobs. But an arrest record almost automatically bars an applicant from obtaining a bond from a private underwriter.

The Federal Government, under contract with a bonding company, has undertaken a pilot program to build a body of valid actuarial experience

[10] Alvin L. Schorr, *Slums and Social Insecurity* (Washington: U.S. Department of Health, Education, and Welfare, Social Security Administration, Division of Research and Statistics, 1963), Research Report No. 1, p. 47.

[11] See the chapter on New Directions in Manpower Programs; also *1966 Manpower Report*, p. 76.

for a "high-risk" group. This experience is intended as a guide to private underwriters in providing appropriate bonding. The program, now operating in some 10 cities and four States, is being extended for the coming year. Applicants to the public Employment Service and persons in MDTA training programs are eligible for bonding under this program.

In effect only since July 1966, the program has helped several hundred persons to find jobs. While fewer than a hundred have actually been bonded under the program, almost three times that number have been hired under the employer's own bond, when the employer was made aware of the problem and the program and was given more information about the applicant.

No claim to recover bond has been made, as yet, under the program. If this experience continues, it should stimulate private underwriters to offer bonding more generally to ex-offenders. Another step will then have been taken in restoring them to productive lives.

PROBLEMS OF THE JOB SEARCH

To the obstacles which bar slum residents from satisfactory employment—and often from any job—must be added problems associated directly with the job search. In general, employers do not recruit people from these areas, most of them members of minority groups, for any but the most low-skilled, menial jobs (although there are now conspicuous exceptions to this rule—for example, in the steel industry, where employers and the union are cooperating with the Government in a program to upgrade workers and hire the disadvantaged).[12] Furthermore, slum residents generally lack information on available job openings and on the most effective ways of looking for jobs. And they have so far had limited access to placement and other services that might aid their job hunt or have felt that it was not worthwhile for them to use these services (though this situation is being much improved through the Youth Opportunity Centers and other facilities now in operation in many slum neighborhoods).

[12] See the preceding chapter on New Directions in Manpower Programs.

Discriminatory Hiring Practices

The job-finding difficulties of workers in poverty areas are often compounded by discrimination on the basis of race, ethnic background, and age.

Unnecessarily restrictive requirements with respect to education and skill, for jobs where these requirements have little if any relevance to the work performed, are prevalent. Such requirements provide an effective way of screening on a racial basis.

Furthermore, the attitudes expressed by some local officials in the slum areas visited reflected generally low expectations of slum residents, in particular the nonwhite residents. Such attitudes served to reinforce the workers' feelings of insecurity and inadequacy, which render their job search more difficult.

Discrimination on the basis of age was more overt and applied not only to workers over 45 but to youth under 21. In a canvass of employers in one of the cities surveyed, a third of those interviewed said they avoid hiring people under 21, whose very youth has become a symbol of instability and inexperience. In the words of one employer: "A man changes jobs three times in a lifetime. I don't want to get him on the first one." Such age discrimination, compounded by discrimination on the basis of race, creates special difficulties and frustration for youth in minority groups.

It appears that employer attitudes may be a greater factor in the high unemployment rate of disadvantaged youth than has been realized. And in the case of young women without salable skills, there is the added factor of employers' reluctance to hire workers who, they think, may soon leave their jobs because of early marriage or childbearing. This hiring policy, combined with the handicap of their race, has helped to push the rate of joblessness among nonwhite girls to by far the highest level for any population group.

Knowledge of Jobs and Ways of Looking for Them

Though many workers lack adequate information on available jobs, this is particularly true of slum residents. Really effective methods of communicating job information do not yet exist in the slum districts visited. Newspapers, radio and

TV advertisements, and placement offices all fail to reach out sufficiently into the slums, and the principal form of communication about jobs is from personal contacts. Since people living in poverty areas generally have contact only with their friends and neighbors in low-level occupations, this kind of communication does little to widen their knowledge of job openings or their jobseeking activities.

In-migrants, particularly those recently arrived in the city from farm areas, lack information about jobs and the services available to help them. A study of recent migrants to Cleveland, for example, showed that few are aware of existing training opportunities, and that almost none have ever been contacted by social workers or others in a position to appraise their experience, abilities and needs and to direct them toward appropriate service agencies. Yet both white and Negro migrants have been unanimous in expressing a desire for occupational training.[13]

The narrowness of the job search among the unskilled and disadvantaged has also been documented by many studies—among them, one recently made of applicants for laborer jobs with the Federal Government. These men more often look for jobs by checking newspaper ads and inquiring around among friends and neighbors than by going directly to employing establishments or employment agencies, either public or private.[14]

The jobseeking patterns of 450 disadvantaged youth in Philadelphia were also explored in a recent study.[15] The most striking finding was that two-fifths of these youth had never made a single contact with an employer. And only 1 out of every 5 had made as many as one such contact per week. The longer the period of their unemployment, the less effort they made to find jobs.

How little these young people know about jobs is shown by the high proportion (nearly one-half) who were unable to express any job preferences. Those who had preferences cited the kinds of jobs commonly held by their relatives and friends.

Any direct job applications these youth made were mostly at factories ("because of better pay") or at small neighborhood stores (because these youth "did not expect to be hired" by larger department stores which, they thought, required a high school diploma even for packing, stockwork, delivery, or sweeping jobs). Girls applied to hospitals and nursing homes, despite the low wages offered, because they "do not require high school diplomas" and provide "free meals." As a group, these youth had little hope or expectation of finding work and often stopped looking before they had made any extended effort to get jobs.

Disillusionment and lack of faith both in their own potentialities and in community programs to help them, where these exist, are clearly an important barrier to persistent job hunting by disadvantaged workers. The response to some recent job development programs in the slum areas visited was very poor—owing in part to the workers' belief that actually there were no jobs.

The psychological attitudes and attributes which contribute most to a successful job hunt are ones slum residents seldom have an opportunity to develop. A recent study of the relationships of social-psychological factors to the ways in which a worker looks for a job and to his chances of success found that the important positive factors include faith in the efficacy of personal planning, assertiveness (needed, for example, in direct applications at hiring gates), and lack of anxiety about job interviews. The authors concluded that techniques for changing attitudes and motivation must be incorporated into comprehensive manpower development programs.[16]

Ironically, slum residents, who are the most in need of placement and counseling services of any group in the city population, are those most out of reach of such services, both geographically and psychologically. Employment offices have usually been located in downtown or business areas. Slum residents must spend both time and money they can ill afford to register with such offices, and the location is likely to make them feel very out of

[13] *The Impact of Prevocational Training, Counseling, and Job Finding Assistance on the Occupational Adaptation of Recent Southern Migrants to Northern Cities* (Washington: Bureau of Social Science Research, Inc., 1966), experimental and demonstration project sponsored by Office of Manpower Policy, Evaluation, and Research.

[16] For a full report on this study, which was sponsored by the U.S. Department of Labor, Manpower Administration, Office of Manpower Policy, Evaluation, and Research, see Harold L. Sheppard and A. Harvey Belitsky, *The Job Hunt* (Baltimore, Md.: The Johns Hopkins Press, 1966).

place. When placement agencies are established within slum areas, a great improvement occurs. In Boston, for example, a downtown Urban League office had found jobs for only 250 people during a 5-year period. Then a new office was opened in a slum district. Within 1 year, placement figures doubled. And, in addition, 275 people were placed in on-the-job training programs.

The success of the Employment Services' new Neighborhood Youth Centers in increasing job placements of disadvantaged youth provides some evidence in the same direction. It is a hopeful indication of the progress in employment of disadvantaged adults that may be possible through the network of neighborhood centers now being established to provide services to all groups of slum residents.[17]

LOCATION OF JOBS

The movement of business and industry away from the central city and toward the suburbs during the past decade has created major obstacles to employment of slum residents—barriers much greater than these people themselves perceive. Without automobiles or money for public transportation, and living mostly within the confines of their slum neighborhood, many have little if any knowledge of the new plants which are springing up in the outskirts of their cities.

Between 1954 and 1965, almost two-thirds of all new industrial buildings (measured by valuation) and a little over half of all new stores were constructed outside the Nation's central cities. In some areas the proportions considerably exceeded even these high national averages. In Chicago, for example, over three-fourths of the new industrial buildings and two-thirds of the new stores were in the suburbs; in Los Angeles, 85 percent of the new industrial buildings and 63 percent of the stores. The central city is becoming more and more the working place of office workers—largely white people, who commute from the suburbs, while the shortage of unskilled jobs in or even near the slum areas increases year after year.

The jobs available to slum residents have been changing in response both to changing occupational patterns—to the disadvantage of semiskilled and unskilled workers—and to these shifts in the location of industry. Between 1947 and 1967, total employment in seven large central cities rose by only 50,000, while employment in the metropolitan rings surrounding those same cities increased by 900,000.

By and large, jobs in suburban areas are not held by workers from the central city slums or by Negroes. Distance and travel cost shut most slum dwellers out of this fastest growing job market in the Nation. Even within the city, plants are often many miles distant from the slum areas, and transportation is costly and time consuming. Transportation to the suburbs is prohibitive at the low wages most slum residents can command.

The Traffic Commission of New York City estimates, for example, that it would cost a worker in Harlem $40 a month to commute by public transportation to an aircraft factory on Long Island, or a parts plant in Yonkers, or a shipyard on Staten Island. The cost for a Bedford-Stuyvesant resident to work in the same places would be nearly $50 a month. Since the income of most slum residents is low, even when they are employed, such transportation costs could reduce real earnings to the point where the incentive to work is gone.

Los Angeles is another major city where transportation problems are acute. Since World War II, important industrial centers have sprung up outside of central Los Angeles, whereas previously most industry in the metropolitan area was within the city. Persons working or looking for work who do not have cars find it difficult to get or hold a job in these outlying areas. It costs anywhere from 50 cents to $1.78 to make a round trip between central Los Angeles and the nearest industrialized areas. On trips to more outlying points, costs are much higher and service less frequent.

Within the south central area—Watts—very few jobs are available. Private transportation is a necessity if Watts residents are to find jobs. But 30 percent of the households in this area do not have automobiles.

Similar difficulties are reported in other major cities. The area in which Negroes live in Chicago has a lower rate of use of automobiles for commutation to jobs than any other area of the city.

Furthermore, transportation costs are rising rapidly. Local transit fares are among the items showing the most rapid increase (equaling the

[17] For a discussion of these programs, see the preceding chapter.

rise for medical services) in the Consumer Price Index. During the period 1954–65, public transportation costs soared twice as fast as the costs of owner-operated automobiles.

One recent development—made possible by a Mass Transit Demonstration Grant from the Department of Housing and Urban Development—promises some help to residents of Watts. A new bus line was opened in July 1966, connecting Watts with the industrial area around the Los Angeles Airport and subsequently with another industrial and commercial area. Within 2 months, the line was handling over 10,000 passengers a week, and fares had been substantially reduced. Shortly after the line was opened, a passenger count showed that the majority were either going to work or looking for work.

Similar provision of transportation directly from slums to expanding industrial areas could, of course, help to open more jobs to slum residents in other cities. The new Model Cities Program (discussed later in this chapter) will help to make this possible. One of its statutory purposes is to establish better access between homes and jobs.

Changing Social Conditions and Population Trends

The problems of joblessness and poverty which now beset slum residents gain urgency from comparison with conditions a few years back. These problems have not only failed to ease but actually worsened in many respects since 1960.

Slum districts have been almost completely bypassed by the national gains in employment and standards of living, though this has not been true of all slum residents. There is evidence of considerable movement of people into and out of the slums. The residents able to get ahead economically leave for better neighborhoods as soon as they can; newcomers replace them as they move out; and the poorest, most disadvantaged people remain, unable to move. White people generally find it much easier to leave than Negroes, both because of their higher average earnings and because they do not face the barrier of segregated housing, particularly in suburbia. So the slums more and more become a separate world, with a rising proportion of Negroes in an increasingly deprived population.

The deteriorating situation and environment in slums is made plain by the following highlights of economic and social change in the areas covered by the November surveys. And a brief review of population changes in central cities emphasizes the need for opening of doors—not only to housing in wider areas, but also to education, training, and worthwhile jobs—particularly for the growing numbers of Negroes who will otherwise be stranded in slums.

HIGHLIGHTS OF ECONOMIC AND SOCIAL CHANGE

The average rate of unemployment for the 10 slum areas surveyed was virtually unchanged between the time of the census in April 1960 (8.8 percent) and November 1966 (9.1 percent). Yet the national unemployment rate declined—from 5.4 to 3.4 percent—over this same period. (All these rates are without seasonal adjustment.)

Women workers in these slum areas suffered a sharp rise in unemployment—from 8 to 11 percent between 1960 and 1966. This rise undoubtedly reflected, in part, the great increase in teenage Negro girls in the slum population (who have by far the highest unemployment rate of any population group). It also reflected the rising proportion of women family heads in the slum areas. These women, who are their families' chief breadwinners, generally have higher unemployment rates than those living with their husbands (who are much less likely to persist in looking for work when they have difficulty in finding jobs).

For men in these slum areas, unemployment declined (from 9.2 to 7.7 percent between 1960 and 1966), but not nearly so much as for all men in the country. And this drop in unemployment was by no means a full indication of the extent of joblessness among men in slums, since the proportion of these men in the labor force fell sharply during the same period.

The drop in *labor force participation rates* for men was much greater in the slum areas than in

the country generally between 1960 and 1966. And women in slum districts shared not at all in the national rise in labor force participation of women, as the following figures show:

	Labor force participation rates	
	April 1960	November 1966
Men in—		
10 slum areas	74	65
Total United States	77	75
Women in—		
10 slum areas	43	40
Total United States	34	40

These figures apply to all slum residents aged 14 and over (the only age group for which trend data are presently available). In part, the changes shown reflect the great increase in the number of teenagers in slums (of whom many are still in school, despite the high rate of school dropouts among these disadvantaged youth). But the declining proportion of men in the work force certainly reflects also the growing discouragement of many slum residents, both youth and adults, and their alienation from the economic mainstream.

The occupational trends for men in poverty areas are equally adverse. The proportion of men employed in laboring or operative jobs rose substantially in poverty areas between 1960 and 1966, while remaining unchanged in the country as a whole.[18] And the proportion in white-collar occupations declined, contrary to the national trend. In all probability, some of the more highly skilled workers left the slums, while those coming in or unable to move were chiefly low-paid, low-skilled workers.

The increasing proportion of *households headed by women* is another disturbing social trend in the slums. Some 47 percent of the women in the 10 slum areas in 1960 were married with a husband present in the home. By 1966, this proportion had declined to 43 percent. Conversely, the proportion of women widowed, divorced, or with an absent husband rose from 30 percent to over 33 percent and the proportion reported as single edged upward slightly. This rise in the proportion of households without a male head has obvious implications in terms of reduced family income, and also of a home environment likely to contribute heavily to juvenile delinquency and other behavioral problems among slum youth.

[18] For 1966 data, see James R. Wetzel and Susan Holland, op. cit. Data for 1960 are from a special sample tabulation of census poverty tracts.

A more hopeful sign is the recent rise in the *average educational level* of slum residents. Between 1960 and 1966, median years of school completed rose from 8.3 to 10.4 for people aged 25 and over in the 10 areas surveyed. This improvement partly reflected the influx of younger people into the cities (since young people, as a group, have more education than older ones). But the educational attainment of slum residents is still far below the national average—so low, in fact, as to be a major factor in their sub-employment problems.

Changes in *family income* provide culminating evidence of the worsening problems in slums. In the areas for which information is available, family income has failed to rise along with income in other parts of the same city or the country as a whole. In the poverty neighborhoods of Cleveland, for example, family income rose by only 7 percent between 1959 and 1964, compared with 17 percent in the remainder of the city. Income edged up by only 4 percent in South Los Angeles and remained virtually unchanged in East Los Angeles, while it rose by nearly 9 percent nationally, as shown by the following figures on median family income:

Area	1959	1964	Percent change
Cleveland:			
Poverty neighborhoods	$4,937	$5,259	6.5
Remainder of city	6,558	7,642	16.5

	1959	1965	Percent change
Total, United States	$5,417	$6,882	8.6
South Los Angeles	4,497	[1] 4,669	3.8
East Los Angeles	5,094	[1] 5,106	.2

[1] For the 12 months ending mid-November 1965.

Family purchasing power in these slums actually dropped during this period—judging by the rise of over 8 percent in the National Consumer Price Index for urban families between 1959 and 1965.

The problem of *slum housing* deserves special consideration because of its many effects on how well the residents are able to function as workers and citizens. Besides its influence on health, housing as bad as exists in many slums is an assault on the occupants' personal dignity and feelings of self-worth and can contribute to their alienation from the obviously better housed people in the rest of the city and to their difficulties in work adjustment.

Whether the housing situation was getting better or worse in all 10 slum areas visited in November was not determined, but in some the evidence of further deterioration was clear. A special census survey of the South and East Los Angeles areas in November 1965 showed that, in the 5 years since the 1960 census, the proportion of substandard units had risen sharply, while median rents had risen also. More specifically, the findings were as follows:

Year	South Los Angeles	East Los Angeles
	Percent of substandard housing units	
1960	18	25
1965	34	35
	Median rents	
1960	$69	$63
1965	77	75

And according to the recent report of the Mayor's Housing and Urban Renewal Task Force in New York City, "during the past five years * * * slum housing has increased more swiftly than it has been eliminated." The number of unsound units in that city rose from 420,000 in 1960 to 525,000 in 1965, while the median rent/income ratio was rising from 18.4 percent to 20.4 percent.

For slum residents, this rise in the rent/income ratio can be as serious as poor housing. If the cost of housing is too high in relation to income, as it frequently is in the slums, it can swallow up money needed for food, clothing, school supplies, training, jobseeking, work tools, and health and dental care—in fact, for the essentials of an escape from poverty.

The *story of economic decline* in one slum area—the Hough and surrounding area of Cleveland—sums up all these elements of change and their devastating impact on the people in this slum.[19]

The average person in the Hough area was in worse economic straits in 1965 than the typical inhabitant in 1960. Unemployment was higher, income was lower, and a larger percentage of the population was poor.

Further, this ghetto's economic potential—its potential for generating earned income—declined appreciably over the 5-year period. The families with the most limited earning capacity—those headed by women or aged people—have increased in number, while those with the greatest earnings potential (essentially families headed by men under 65) have become fewer—with the result that the family units with limited economic potential now represent a far larger proportion of the slum population than they did in 1960. When this change is tied together with the higher unemployment rates and lower family income, the deterioration in the slum residents' potential for economic security becomes evident indeed.

Although most other groups in this slum population have declined in number since 1960, the numbers of Negro family units headed by women (the weakest in economic potential) and of children in these families have risen rapidly. Negro families with women heads have increased by 8 percent, while children in these families have increased by nearly a third—an additional 4,000 poor children in 5 years. Members of these families, to a greater extent than any other group in the slums, appear doomed to persistent poverty. The entrapment of Negro children in poverty, with small likelihood of leaving it during their childhood, is probably the grimmest manifestation of the crisis in this and other slums.

POPULATION CHANGES

The most striking population changes affecting central cities and their slums are the rapid increase of the cities' Negro population and the shift of the white population to suburbia. The Negro population in all central cities taken together increased by 20 percent between 1960 and 1965, while the white population there actually declined (for the first time, and by about 1 percent).[20]

The proportion of Negroes in the central city population has more than doubled in the past quarter century. (See chart 14.) It actually increased at a faster annual rate between 1960 and 1965 than in the previous decade. Simultaneously, Negroes have been unable to make any significant inroads into suburbia. They represented only 5 percent of the suburban population in 1965, approximately the same proportion as a generation earlier.

[19] Walter Williams, *Cleveland's Crisis Ghetto—Decay and Prosperity* (Washington: Office of Economic Opportunity, 1966), unpublished paper based on a special census of this area conducted by the Bureau of the Census.

[20] The discussion in this section relates to "central cities" of Standard Metropolitan Statistical Areas (SMSA's include one or more counties with a central city of 50,000 or more). This group of 212 cities included an estimated population of 43.4 million people 14 and over in April 1965.

CHART 14

The proportion of nonwhites in the U.S. population increased slightly during the past quarter century . . .

but it more than doubled in central cities . . .

and declined in suburbia.

Source: U.S. Department of Labor.

The increased numbers of Negroes in central cities, chiefly in the poorest areas, and of whites in the suburban rings are the combined result of population growth and migration patterns. The Negro population aged 15 and over in central cities rose by about 1.1 million between 1960 and 1965—with in-migration, largely from rural areas, accounting for about 60 percent of this increase. The white population, on the other hand, dropped by 400,000, because migration to the suburbs more than offset gains from population growth. (See table 3.)

A fact of particular importance from the viewpoint of manpower and educational policy is the tremendous increase in Negro teenage population. The number of Negro teenagers in cities rose by over 50 percent in the short 5-year period, 1960–65, about twice as fast as the teenage population nationally. And the Negro young adult population (age 20 to 24) rose by one-fourth.

These unprecedented increases in numbers of young people—many of them now jobless, out of school, and a potential source of social dynamite in the slums—have obvious and staggering policy implications. They underline once more the essentiality of expanded programs directed to the needs of this particular group.

Next to Negro youth, the most rapidly growing group in the city populations are Negroes aged 45 and over. The number of these older Negroes, who face the double handicap of racial and age discrimination added to their generally limited education and skill, increased by 15 percent in central cities between 1960 and 1965. Here again is a group with problems demanding priority consideration.

The heavy out-migration to the suburbs of the more well-to-do white people and the rapid increase in the cities' Negro residents have been accompanied by a spreading out of slum areas, evident in most large cities. These trends show no signs of weakening. The Negro population in the central cities is now so large that, with present birth and death rates, substantial growth in the nonwhite population is inevitable. And in-migration is certain to continue, though possibly at a declining rate, since employment opportunities in agriculture are expected to go on declining in the foreseeable future.[21]

Other factors besides population growth also contribute to the widening and shifting of slum areas, however. Industrial and freeway construction and even many urban renewal projects have displaced slum residents and forced them to crowd into adjacent areas. Furthermore, when the income of Negro families rises to a point where they can afford better housing, the only houses they can find to move to are often on the fringes of the slums—creating the "border" conflict which appears in many residential areas when Negro families move in.

[21] See the chapter on Underemployment and Poverty in Rural Areas for a discussion of this point.

TABLE 3. COMPONENTS OF POPULATION CHANGE IN CENTRAL CITIES FOR PERSONS 15 YEARS AND OVER, BY COLOR AND AGE, 1960 TO 1965

Color and age	Absolute change (thousands)			Percent change in total population 1960 to 1965
	Total	Due to migration	Due to natural growth	
Total	696	−1,001	1,697	1.7
15 to 19 years	844	65	779	21.3
20 to 24 years	461	326	135	12.1
25 to 34 years	−671	−548	−123	−8.8
35 to 44 years	−536	−529	−7	−6.8
45 to 64 years	75	−462	537	0.6
65 years and over	523	147	376	9.2
White	−378	−1,599	1,221	−1.1
15 to 19 years	478	−48	526	14.6
20 to 24 years	279	144	135	8.9
25 to 34 years	−710	−701	−9	−11.7
35 to 44 years	−661	−565	−96	−10.3
45 to 64 years	−177	−525	348	−1.6
65 years and over	413	96	317	8.1

Thus, programs to increase the employability and employment of slum residents must be accompanied by programs to provide better housing for them on an open basis in larger areas in and outside the city. Legislation to eliminate discrimination in the sale or rental of housing was recommended by the President in his message on Civil Rights in February 1967. Such legislation, as well as the construction of additional low-cost housing, is essential to halt the increasing and dangerous demarcation of metropolitan areas into two worlds—an inner core of deprivation and explosive discontent within an outer ring of affluence.

Present Programs and Program Needs

The poverty, misery, and joblessness in sections of our major cities clearly demand nationwide attack. And many of the weapons needed for this campaign are now at hand as a result of the unprecedented legislative advances of the past 3 years in education, training, health, housing, and economic opportunity.

It is too little recognized that Federal appropriations going to improve the conditions of the poor have risen from $10 billion in 1960 to an estimated $22 billion in fiscal 1967. (See chart 15.)

Federally supported program action during the past 2 years has benefited in some degree as many as 2½ million of the Nation's poor. Nevertheless,

CHART 15

Federal aid to the poor has more than doubled since 1960.

Source: U.S. Department of Labor, based on data from Bureau of the Budget.

it is an unhappy fact that we have as yet only scratched the surface, not cut to the root, of poverty problems in slum areas.

The new directions of action in manpower programs in 1966 (described in the preceding chapter) are aimed particularly at reaching greatly underprivileged people, increasing their employability, and getting them into reasonably satisfying, decently paid jobs. The network of multiservice neighborhood centers, which is being developed in slum areas throughout the country—utilizing the Youth Opportunity Centers now operated by the Employment Service in 127 cities and the neighborhood centers established by the Community Action Program—is of special importance, since the absence of readily available services has contributed heavily to slum residents' job-finding problems.

Experience in helping the disadvantaged obtain jobs, gained through these and other programs, has combined with the results of the November slum surveys to dictate a new strategy of attack on unemployment and underemployment in the poorest urban and rural areas. Before considering this new program, however, a brief progress report is in order on the accomplishments and goals of several major programs which must continue to provide the chief resources for improving the education, training, and employability of slum residents.

EDUCATIONAL PROGRAMS

Elementary and Secondary Education Act

From the viewpoint of a longrun solution to slum residents' sub-employment problems, no action is more important than a great strengthening of the education poor children receive from preschool onward. As many educators have pointed out, these youngsters need much better schools than more privileged children, not the inadequate, poorly staffed schools now all too common in slum areas.

The aid to schools in districts with many poor children, provided under title I of the Elementary and Secondary Education Act of 1965, is addressed directly to this problem. In fiscal 1966, nearly $1.2 billion was allocated to local educational agencies in over 17,000 school districts, to assist them in expanding and strengthening programs for educationally deprived children. About 2.5 million children benefited from the 1966 summer programs, and roughly 8.3 million were aided in the fall school session. These programs served all grade levels, including approximately 400,000 preschool and kindergarten youngsters. A large percentage of the children aided were in city poverty areas.

The ESEA title I funds may be used for a wide range of purposes, as dictated by local needs—for the physically and mentally handicapped, for school dropouts, for preschool youngsters, and for children in all grades from the 1st to the 12th. Top priority is being given to remedial reading and other remedial education projects; but many programs support special enrichment, cultural, and

recreational activities to broaden the children's horizons and help them overcome social and emotional handicaps that affect their ability to learn. Where necessary to carry out the purposes of the act, title I funds may also be used for clothing, food, medical and dental care, and for essential construction and equipment. Local educators have wide latitude in utilizing title I to solve the particular problems of the educationally disadvantaged in their areas.

Great improvement in educational achievement can flow from wise use of these funds. In California, for example, concentrated services have led to significant gains in reading among deprived children. In Wichita, Kans., evening and Saturday classes in metal and woodworking for interested junior high school pupils have led to remarkable improvements in attitudes and attendance at their regular classes. And in Detroit, a pilot program is teaching preschool youngsters to identify common objects in words they had no opportunity to learn at home, and other programs are helping to remedy reading and language deficiencies among students up to the 12th grade.

The National Advisory Council on the Education of Disadvantaged Children took a close look at the first summer programs in 1966. In its report to the President in November, the Council said that "The single most widespread achievement of the Title I program is that it is *causing teachers and administrators to focus new thinking on ways to overcome educational deprivation.*"

The Council's most disappointing finding with respect to these initial programs was "*the failure of most schools to identify and attract the most seriously disadvantaged children.*" It strongly urged "greater mutual involvement of school officials and parents and neighborhood antipoverty groups" in planning programs for disadvantaged children.

Schools in poor neighborhoods, many of which lack libraries and are using inadequate, out-of-date textbooks, are also receiving help in purchasing books and other instructional materials under the ESEA (title II). And a program known as PACE (Projects to Advance Creativity in Education), also supported under the ESEA (title III), is encouraging innovative applications of new knowledge, including programs for disadvantaged children.

Project Head Start

The primary source of preschool aid for disadvantaged youngsters is Project Head Start, launched in 1965 as part of the War on Poverty, although programs under the Elementary and Secondary Education Act also provide preschool education and other services for children needing this help.

Project Head Start is broadly conceived as a child development program, concerned with all problems which affect a child's ability to profit from education, including his physical needs, mental attitudes, and home background. It endeavors to involve parents as well as teachers, doctors, social workers, and other professional workers in a team approach to coping with the consequences of cultural and economic deprivation. Classes are small (typically 15 children) and are staffed by a teacher, teacher aide, and at least one volunteer, so as to insure close personal attention for each child. Children also receive needed health and psychological services and get at least one nourishing meal a day. Altogether, the full range of services provided costs roughly $1,000 per pupil per year.

During 1966, nearly 575,000 youngsters were enrolled in Head Start summer programs and 160,000 in full-year programs which, in some cases, provided all-day care so that mothers could work and get off welfare rolls. The majority of these children lived in metropolitan areas. And about 40 percent of them were Negroes. Altogether, about a half million 3- to 5-year-olds were in the program during 1966, one-fifth of the 2.5 million youngsters of this age living in poverty in the United States. The number of 6-year-olds benefiting from the program was large also (over 200,000 in 1966). And total enrollments in Head Start programs are not expected to show much change in 1967 from last year.

Children leave the program with a genuine head-start toward readiness for school. However, recent research findings have corroborated the Head Start staff's early concern that—in an unsympathetic elementary school environment, without an individually oriented approach to the problems of disadvantaged children—Head Start children might lose the gains achieved or even do worse than those who had never had the experience of such a program.

To maintain and expand Head Start gains, the President has recommended that a Follow Through program to improve primary school services for children in areas of acute poverty be launched, with an appropriation of $135 million for fiscal 1968. The development of close ties among educational and community agencies will be necessary to provide the integrated educational, health care, parental counseling and other child development services envisioned. The funds recommended should make possible the development and testing of Follow Through services on a pilot basis. Some increases in enrollments in full-year Head Start programs, particularly in enrollments of 3-year-olds, and in pilot programs to explore the effectiveness of Head Start services for still younger children, are anticipated. Legislation authorizing a pilot program to provide school lunch benefits to needy preschool children has also been recommended by the President.

ECONOMIC OPPORTUNITY PROGRAMS

Community Action Program

The main arm of the War on Poverty in urban slums, as in many impoverished rural areas, is the Community Action Program. Project Head Start is organizationally a part of this broad program. And there are also Community Action projects underway in more than 1,000 cities and towns throughout the Nation.

These programs aim at the improvement of job opportunities, housing, education, health, or almost any other problem which must be dealt with in order to raise the level of life in poverty areas. The programs are carried on with the cooperation of many public and private groups—welfare agencies, churches, employment offices, settlement houses, schools, and others—and with the active participation of the poor themselves, both as members of governing boards and as paid staff members.

Neighborhood centers are a key feature of the Community Action Program in most cities, and have provided the pattern for the more elaborate multiservice centers in 14 cities now being developed through the cooperative efforts of a number of Federal agencies.[22] A typical neighborhood center offers under one roof such services as day care for children of working mothers, adult basic education, volunteer tutors, quiet study areas, legal services, housing information, consumer counseling services, and employment services. Several offer health services.

Educational services tailored to the needs of the poor in the vicinity are an important feature of most projects. These may include, for example, Saturday schools, library services, special teacher training, intensified guidance and counseling, remedial tutoring, and adult education.

Employment of the poor in projects directed toward their own neighborhoods is always emphasized, and is one of the Community Action Program's special contributions. It is anticipated that by the end of fiscal 1967 well over 100,000 poor people will be employed as teacher aides, health aides, child supervisors, and clerks, as well as in other subprofessional jobs which can lead to careers outside the antipoverty program (including about 75,000 in Project Head Start). Furthermore, specialized training for their jobs has been provided for many thousands of these poor people (probably close to 25,000 of them by the end of fiscal 1967).

Neighborhood Youth Corps

Aware of the disproportionately large number of disadvantaged youth living in urban areas and their high rate of unemployment, the Neighborhood Youth Corps [23]—the War on Poverty's largest youth program—concentrated 70 percent of its job opportunities and its funds in urban areas in 1966. Negroes made up 37 percent of the in-school and 46 percent of the out-of-school enrollees during 1966—reflecting the special efforts to enroll disadvantaged Negro youth, particularly those in the inner city.

Eligibility standards for enrollment in the NYC permit inclusion of only those youth most in need of the program—the poorest and most disadvantaged. Thus, a large majority of the NYC enrollees in urban projects are unquestionably from the poorest areas in the city.

Altogether, NYC provided more than 350,000 job opportunities in urban centers for young men and women aged 16 to 21 during fiscal 1966. To

[22] See the chapter on New Directions in Manpower Programs.

[23] For a further discussion of the Neighborhood Youth Corps, see *1966 Manpower Report*, pp. 101–104.

help alleviate the severe unemployment among city youth during the summer, NYC specifically allocated 130,000 summer job opportunities to city students from low-income families. In addition, the year-round program for out-of-school youth operated during the summer and provided 50,000 job opportunities for unemployed city youth who had dropped out of school.

Job opportunities are designed to provide constructive work experience for the enrollees while benefiting communities through their services. Under supervision, in entry-level jobs which usually pay $1.25 per hour, NYC urban enrollees have worked as aides in schools and libraries, parks and hospitals, cafeterias and museums. They have assisted with surveys to determine housing needs in slum areas and helped to sign up persons eligible for benefits under Medicare. They have taken over routine but important daily tasks from overburdened nurses and technicians in short-staffed city hospitals, and they have also freed overworked school teachers from routine tasks.

The Neighborhood Youth Corps has thus prepared great numbers of disadvantaged young people for permanent employment, and it has undoubtedly prevented many from dropping out of school. It has also had noticeable effects in reducing juvenile crime and otherwise mitigating youth problems. For example:

—In city after city, judges, probation officers, and other authorities have linked the presence of a NYC project to a decline in crime and juvenile delinquency rates.

—Urban school systems around the country report a decrease in dropouts and absenteeism and an improvement in school grades coincident with the establishment of NYC projects. Furthermore, in fiscal 1966, 11 percent of the enrollees in NYC projects for out-of-school youth returned to school or further training. These were dropouts—young men and women considered permanently alienated from formal education. The majority were urban youth.

—One-fourth of the enrollees in out-of-school projects in fiscal 1966 left NYC for permanent employment or for service in the Armed Forces. A large majority of these were disadvantaged young people from the inner city, for whom a permanent job or admission into the Armed Forces had previously seemed impossible.

Changes in the NYC program authorized by recent amendments [24] should further increase the effectiveness of urban projects. For example, instead of having to wait until they are 16, as previously required, young people from low-income families who are students in grades nine to 12 may now enroll in NYC in-school programs, and so may those in lower grades who are of high school age. It is believed that admission to NYC at these earlier ages will help to motivate young people as students at the point when they are making the crucial decision whether or not to drop out of school.

Furthermore, NYC may now, for the first time, pay out-of-school enrollees for time spent in counseling or education—services to which it has been difficult to attract enrollees in out-of-school projects, despite the special importance of these services for disadvantaged urban youth.

Job Corps

The Job Corps [25] serves both urban and other youth whose lives have been so underprivileged that they have little chance of becoming productive citizens without a change of surroundings.

The youth enrolled always lack leadership at home, often have a lifelong pattern of rejection and failure, and may be strongly pressured to engage in criminal or antisocial behavior. Basically, the mission of the Corps is to locate these greatly disadvantaged out-of-school, out-of-work youth and enroll them in its residential programs; train them in educational, vocational, and social skills; and then place them in positions with opportunities for their future growth.

More than 30,000 young men and women were enrolled in late 1966 in the Corps' 116 centers—including both conservation and urban centers, and two special experimental centers. Besides remedial education, greatly needed by all enrollees, the centers emphasize guidance and counseling services and efforts to help corpsmen develop good health habits, some initiative and sense of respon-

[24] For a discussion of other amendments affecting the NYC program, see the chapter on New Directions in Manpower Programs.

[25] For a further discussion of the Job Corps, see *1966 Manpower Report*, pp. 104–106.

sibility, and the social skills they will need for holding a job. They also provide training for a variety of occupations, at different levels suited to the corpsmen's varying abilities, but always of a kind which will make employment possible. And they pay corpsmen a modest allowance besides meeting their living expenses.

According to recent sample studies conducted for the Job Corps, about two-thirds of the former corpsmen—both those who had completed training and those who had dropped out—were employed when interviewed at wages directly related to the length of their stay in the Corps. In view of the corpsmen's disadvantaged backgrounds and severe personal problems, this record represents substantial accomplishment.

The Job Corps is now planning to set up and test experimental centers of several different types. It is considering, for example, the establishment of halfway houses to facilitate the readjustment of youth completing training programs. Seventy percent of all Corps members now return to or relocate in urban areas. And job retention studies indicate that those who lose their jobs do so because of inability to function independently in a competitive industrial environment, rather than because of inadequate occupational skills. The Job Corps halfway house program would be designed to assist Corps members in finding jobs and places to live, and in developing the experience, confidence, and social skills required to live independently and productively in particular metropolitan areas.

The Corps is also planning to develop some experimental nonresidential training centers, and to compare the results they obtain in training and rehabilitation of greatly disadvantaged youth with those obtained at the residential centers. One purpose will be to find ways of distinguishing more exactly between those youth who really require relocation for effective help and those who could be helped through nonresidential programs in their home communities (at much less cost in personnel and financial resources).

MDTA TRAINING PROGRAMS

Even before the reorientation of the MDTA program in 1966, which placed new emphasis on training of the disadvantaged, increasing attention was being paid in MDTA projects in central cities to reaching potential trainees with special job market disadvantages.

The results of this effort are shown in the statistics on MDTA trainees in 29 labor areas where hard-core unemployment, particularly among nonwhites and other minority groups, has been a source of concern. In these 29 areas, workers regarded as disadvantaged [26] represented more than half of the MDTA trainees in 1965 and 1966, though they represented little more than two-fifths of all the unemployed and underemployed workers in MDTA programs throughout the country.[27]

The disadvantaged trainees in the 29 areas included many long-term unemployed. Nearly 1 out of every 3 had been out of work for a year or more, and 2 out of 3 for 15 weeks or longer. Four out of 5 had failed to finish high school. Three-fourths were nonwhites, primarily Negroes. And nearly a fifth were 45 years of age or older.

The worth of the MDTA training to these disadvantaged people must be judged by their success in finding jobs. In 1965, 4 out of 5 of them completed training, nearly as high a proportion as among other trainees. And 2 out of 3 were employed when last contacted—a lower proportion than for other trainees but still an encouraging figure for persons with their record of long-term unemployment and other handicaps.

A comparison of the occupations for which these workers were trained with those of their last jobs also bears witness to the possibility of upgrading persons with multiple disadvantages. Almost two-fifths of the disadvantaged trainees in the 29 labor areas in 1966 had previously worked in unskilled or entry-level jobs. Only 5 percent had held skilled jobs before, and less than 15 percent had white-collar jobs. Yet MDTA training prepared one-fourth of them for entrance into skilled work and a third for clerical, sales, or sometimes even semiprofessional jobs. (See table 4.)

These are encouraging results. It must be emphasized, however, that the number of workers reached by the MDTA projects represent a mere beginning in terms of the total needs of the disadvantaged population of central cities.

---

[26] The disadvantaged were defined as persons with two or more characteristics which have operated (whether justifiably or not) as barriers to their employment. These included such attributes as an age of 45 or over, education below the high school graduate level, and nonwhite racial background; also being on public assistance, having a physical or mental handicap, and a record of long-term unemployment (15 weeks or more).

[27] Data for the 29 areas are based on reports for 52,000 trainees in 1965, and partial reports covering 22,000 trainees in 1966.

TABLE 4. TRAINING OCCUPATION COMPARED WITH PRIOR OCCUPATION OF DISADVANTAGED WORKERS IN MDTA INSTITUTIONAL TRAINING, 29 LABOR AREAS, 1966

[Percent distribution]

Occupation	Occupation prior to training	Training occupation
Total	100.0	100.0
Semiprofessional and technical	1.3	6.0
Clerical and sales	12.6	25.5
Service	28.2	20.6
Agriculture	2.6	3.4
Skilled	5.1	24.2
Semiskilled	14.4	20.3
Unskilled and entry level	35.8	----------

NOTE: Detail may not add to totals due to rounding.

MODEL CITIES PROGRAM

The Model Cities Program, authorized by the Demonstration Cities and Metropolitan Development Act of 1966 and now in the planning stage, represents a new, massive and coordinated approach to regenerating slum neighborhoods. The plan is to focus on specific target areas in each model city, and to attack not only dilapidated and deteriorating housing but also lack of services (health, recreation, education, police and fire protection) and other problems such as poor sanitation and street repair.

The underlying assumption is that solutions to urban problems are to be found only in a concerted effort using all the legislative tools made available by the Congress, plus new supplemental activities, and involving an unprecedented mobilization of local leadership and resources. The program envisages the cooperation of all Federal agencies in making available to local communities all Federal program aids related to their multitudinous problems. At the same time, the community and its officials will be expected to assume leadership in planning and carrying out the program. Federal technical and financial assistance will be forthcoming only when cities present imaginative and effective plans for dealing with the physical and social problems of their blighted areas.

So far, Federal financial assistance has been limited to planning grants. These cover 80 percent of the cost of the planning, with the city making up the remainder. Congress has provided $11 million for planning in fiscal 1967.

The act also authorizes supplementary financial aid for activities connected with the Model Cities Program which are not covered by other Federal programs—up to a total of $400 million in fiscal 1968 and $500 million in 1969. About 70 cities are expected to qualify for this aid. And the President has requested the Congress to appropriate the full amount authorized for 1968.

To meet the requirements for a supplemental grant, a city must show that its planned program will have a substantial effect not only in improving housing but on social problems such as ill health and unemployment. And maximum employment opportunities must be provided for residents of the area in all phases of the program.

The rehabilitation of dilapidated housing should offer particular opportunity for increased employment of residents of the target slum areas. Where residents lack skills required for the jobs becoming available, cities will institute appropriate training, with assistance from MDTA programs. Assurance of employment for area residents will also involve appropriate arrangements with lending institutions, private construction firms, and labor unions involved in the program.

A CONCENTRATED EMPLOYMENT PROGRAM

A new concentrated employment program launched in early 1967 was built upon findings about the Nation's most urgent and critical unemployment and underemployment problems, outlined in this chapter and the following one. To summarize briefly, in many city slums unemployment rates are three times the overall national rate; about a third of the residents who are or should be workers are in a condition of subemployment—unemployed, working only part time, with earnings below the poverty line, or not even looking for a job; economic and social conditions are significantly worse than 6 years ago; and population trends make certain a further intensification of these problems unless drastic action is taken now to change the residents' lives. Furthermore, underemployment and poverty are more widespread and no less severe in many rural areas than in city slums.

The new program was also founded on evidence that present programs have not adequately reached either urban slums or poor rural areas; that an effort to move the greatly disadvantaged into productive employment would be feasible in terms of the numbers involved; and that these people are generally receptive to and ready for training and other help which will enable them to become self-supporting.

Operating experiences, experiments, and research findings under MDTA and Economic Opportunity Act programs and many locally sponsored efforts have also contributed greatly to the planning of the program. This evidence points to the wide range of opportunities that can be opened for even the most disadvantaged workers through training, remedial education, and other supportive services, and also to the special value to these workers of job experience itself—when accompanied by a full measure of services and with the "books not closed" on any individual until he is placed in a viable, permanent job and has achieved the capacity to continue in employment.

The increasing interest and concern of private employers and their willingness to cooperate in projects for employing the disadvantaged (demonstrated in several projects discussed in the preceding chapter) were another important element in the planning. And the experience of the Departments of Labor and of Health, Education, and Welfare, and of the Office of Economic Opportunity in coordinating their own local activities provided guidelines for this new cooperative undertaking.

The program is an attack on what the Secretary of Labor has called the "third front" in the War on Poverty—a direct attack on the greatest concentrations of joblessness and poverty. There are also two other fronts on which advances are essential. The overall progress of the economy must be continued; any general weakening in business conditions would magnify and multiply sub-employment problems in slums. And the great resources for improvement of the entire human condition in this country—provided by recent educational, training, health, civil rights, and housing legislation—must be brought to bear effectively on the problems of the urban and rural poor. But the immediate, critical need for jobs—decently paid jobs, offering some hope for the future—remains unmet.

A concentrated attack on slum unemployment and underemployment has therefore been mounted. The program began in target slum areas of eight cities—as the first step in an effort scheduled to expand to a considerably larger number of cities and rural areas.

All resources now available to provide jobs for the unemployed and sub-employed in the target areas will be pooled—with the immediate goal of developing 25,000 to 40,000 new jobs for previously unemployed residents of these areas by October 1, 1967. With the additional budget resources requested by the President, the number of newly developed jobs which can be provided under the program will rise to at least 100,000 in fiscal 1968.

The program will have two phases, embarked upon simultaneously. The first phase, with the most far-reaching implications, involves close cooperation with the business community in opening to slum residents jobs normally closed to them by obstacles discussed earlier in this chapter—lack of education and training, lack of transportation, health problems, absence of day-care facilities for children, or such factors as arrest and bad credit records. Employer undertakings to provide job opportunities will be accompanied by a Federal commitment to improve the employability of the workers through services suited to their individual needs—including basic orientation on the requirements of working at a regular job, counseling, education, help with transportation or child-care arrangements, and remedial health care.

An important ingredient of the program will be provision for continued counseling or "coach" support until each worker is successfully employed in a decent job. To start with, the slum residents in the program will be given 2 to 4 weeks of work orientation and will be paid MDTA training allowances during this period. When a worker is placed on a job, the counselor will maintain a close relationship with him, and often with his employer, to increase his chances of remaining employed. In some cases the counselor will have to see the individual through a second chance, involving further training or another job, if the first opportunity is lost.

The second phase of the program will center on employment, for both youth and adults, under the Neighborhood Youth Corps and the other work-training programs established by recent amendments to the Economic Opportunity Act (discussed in the preceding chapter). This em-

ployment will be predominantly with public and private, nonprofit agencies. And remedial education, work experience, prevocational training, and other services will be provided as needed to get slum residents into permanent jobs. In many cities this second phase of the program will begin operations while the first is still being developed. Thus, individuals may, in some cases, work and receive training initially on public projects and then move into jobs in private industry.

The Office of Economic Opportunity and the Departments of Commerce, of Health, Education, and Welfare, and of Housing and Urban Development are cooperating in this new program with the Department of Labor, which is responsible for its overall direction. Community Action agencies will have a vital role in spearheading the program in local communities, but all available community resources will be brought into the effort. Local Employment Service offices will be responsible for providing many essential services—including counseling and testing, developing jobs for workers in the program, and coaching and followup with them after they are on the job.

By concentrated efforts in target areas, and with strong support from the business community, the new employment program should give dramatic proof that apathy, despair, anger, and frustration need not be the chief legacy of the slum—that meaningful work and effective education and skill training can enable men and women of the slums, both youth and adults, to become productive, fully contributing workers and citizens, with a more adequate share in the national prosperity.

CENTER FOR PRODUCTIVITY MOTIVATION

The Center for Productivity Motivation was established December 1, 1960 in the School of Commerce at The University of Wisconsin through a grant made by the Johnson Foundation of Racine, Wisconsin. The purpose of the Center is to study objectively the factors affecting productivity. It is hoped that such investigations will shed new light upon those emerging forms of industrial organization which give evidence of stimulating and maintaining capitalism through a widespread private diffusion of the benefits of ownership, with the result that our industrial system can better meet the challenges which it will face in the future.

. . . . . .

The Center is concentrating its efforts in studying the area of total group productivity motivation. This is evidenced in business by such devices as profit sharing, productivity sharing, and employee stock ownership programs

. . . . . .

The Center will furnish reference and materials where available to any individual or group interested in the general area of total group productivity motivation. Inquiries may be addressed to:

Men vs. Machines:

AUTOMATION IN A WISCONSIN COMMUNITY

by John Newhouse

Mr. Newhouse is a staff writer for the *Wisconsin State Journal*, Madison, Wisconsin, and is a member of its editorial board.

—State Journal Photo

A BIG JOB—The operator of this machine keeps an eye on the big device as it goes through its paces, in operations which before were guided much more closely by a human operator.

The circular plastic "doughnut" on the machine holds 30 machine tools, and the electronic part of the machine, guided by tape at the right, tells the machine what to do next. On the floor of the Gisholt Machine Co., it is a part of automation in Madison.

I

Automation's Blessings Are Mixed

(Sunday, November 17, 1963)

For better or worse, automation has come to Madison.

It's to be found in industrial plants, banks, insurance companies, the telephone company, and the plant in which our newspaper is printed.

All over town, people are learning to cope with the changes the more sophisticated machines bring with them, as they do more of the jobs people once did with muscle and mind.

Automation isn't hitting Madison with the impact it may have in a far more industrialized city, where hundreds or thousands of bewildered men and women may find themselves out of jobs and seemingly with no place to turn.

But management in many a Madison business is worrying about how far to go on automation, and what its effects will be. And many a worker is eyeing his job in terms of the machine that one day may take his place.

Take the Gisholt Machine Co., for instance.

A pair of big machines stand on the production floor. They are called Milwaukee-matics. They cost a quarter of a million dollars each. They run 24 hours a day. At that price, they have to.

On the side of each machine is a drum. It holds 30 machine tools. Beside the machine is a cabinet with hundreds of transistors, miles of wires, and a tape that tells the machine what to do next.

The tape gives the orders. The drum rotates, to bring the next tool needed to the fore. An arm plucks the just used tool from the chuck of the machine and carries it back to the drum. At the same time, the new tool is carried to the chuck and readied for work.

As this is going on, a metal casting on a circular table called a palette turns to a commanded point and stops. The body of the machine slides horizontally to one side—just enough. It rises—just enough. The new tool advances and drills a hole—in just the right place and just deep enough to satisfy the tape.

And this goes on, operation after operation.

At the side of the machine sits a man who used to do many of these jobs on less sophisticated machines. Now his work is reduced to fastening

the casting on the palette, making sure the machine performs perfectly, and removing the casting when the work is done.

What does he think of automation?

"It's here," he says. "You can't stop it."

He works the same number of hours as he did on his former job. The rate of pay is the same. But he isn't using the skills that he once used.

The Gisholt company has no alternative but to go to the machines, they contend at Gisholt. The competition is becoming automated. The machines don't get tired. They don't make errors. They don't get in squabbles with their in-laws, and mope. They don't take coffee breaks. They work 24 hours a day.

And this can be reflected in lower costs which mean greater sales and protection of jobs.

"The machine tool company which will survive will be the company which makes the most intelligent use of automation," predicts Rodney Stebbins, assistant sales manager.

And this brings up the question as to just what is automation.

"Automation is a continuation of the industrial revolution, but with feedback," says John Wrage, public relations director for Gisholt.

Some define mechanization as the process by which a machine puts peas in a can, while automation is the process of putting the peas in the can AND making a decision as to which peas shouldn't go in the can and discarding them.

Others say that automation occurs when one machine does a job virtually by itself, and then hands it on to the next machine to do still more work by itself.

On the national level, there are several schools of thought. One holds that end result of automation will be a shift of people in jobs, the creation of many more jobs, and a better way of life.

The opposing school of thought holds that this is the industrial revolution, all right, but it's gettting out of control. It's erasing jobs much more rapidly than they can be, or will be, created. Unless the benefits are spread much more widely, through shorter work hours or some equivalent, humanity is in for tough sledding.

At Gisholt, no one s predicting just where it all will end.

Its Own Role

Ironically enough, the Gisholt firm owes a good part of its present pre-eminence in the machine tool world to automation, introduced long before the word was coined.

Back in the 1940s, Werner Senger, now a vice-president, came up with

a balancing machine. It evolved into a tool which would balance an entire engine, finding the amount of imbalance and its location, and then adding a bit of welded metal or removing a bit of metal through boring to put the engine in balance.

It was automation at its finest. It has helped the Gisholt company to grow here and give jobs to Madison people.

Widespread Effects

Its effects in the American economy have been widespread, and also impossible to measure. Turbines spin at faster speeds. Electric motors are smoother. Cars go faster. And all of this has undoubtedly created jobs elsewhere by balancing machines which humans, without the Gisholt balancers, couldn't balance.

Today, the Gisholt company is automating its newest lathes, in the never-ending battle of industry to put out the best product and make the most sales which, in turn, will protect the jobs of workers.

There are some men, such as those on the Milwaukee-matics, whose jobs have changed.

And there are new jobs.

Somebody has to punch the tape that tells the machines what to do. This is a new, skilled job.

Another new job is that of programming. Computers can produce all sorts of information a modern company needs, but somebody has to be smarter than the machines to tell them what to do.

If a client calls Stebbins to ask when he can expect delivery of a new $200,000 machine, Stebbins can call product control. Cards zip through a sorter. A computer analyzes them; and in minutes, he has a progress report on the machine.

Then, he can advise the client, who can fit a realistic delivery date into his calculations.

'New' Service Man

Another "new" job is that of the service man. No longer is he a man with dirty hands and a monkey wrench. He wears a business suit. He flies by jet, for his time is important. He gets a good income, based on his knowledge of electronics.

He looks over the plants where he services machines for places where other machines of his company will fit in. Salesmen follow up his tips. Executives worry about how to buy the machines, how much money they will make them, or what they will do to the relations between a plant and its people.

The worry over people is a considerable problem at Gisholt.

Shift in Jobs

"Ideally, automation should not result in unemployment," says Wrage. "If anything, it ought to increase employment. But this can be accomplished only at the cost of shifting people from one job to another. And the best shift, of course, is to a higher and a better job."

This means, he says, that some people should be training for the better job, to be ready for the shift when it comes.

And the problems will be with the person unwilling or unable to learn that new job.

Furthermore, he says, automation is changing hiring patterns. At one time, he said, the man sought was the man with the weak mind and strong back.

Different Pattern

But a different pattern looms today. The accent is on the man who can advance to the better job, if the machines demand that advance—not the man who won't or can't change.

"And the problem of the future may well be this army of unemployables which include the most tragic of all, the persons with good capabilities who drop out of school and find themselves with no place to go," Wrage says.

Over in one end of the production floor of the Gisholt plant, there are three lathes. One of them has a human operator, making the changes as they are needed, watching the work, intent on his job.

End Unknown

Two of the lathes are doing the same work, at the command of little black boxes mounted atop the machines. Their operator sits some 50 feet away.

No one knows exactly where it all will wind up.

But there is a lot of concern, both on the part of the worker and of the plant management.

II

Automation Can Develop Jobs, Too

(Tuesday, November 19, 1963)

VERONA—The Carnes Corp., in Verona, is growing like all get out.

Since 1957, when a new management took over, the number of square feet of manufacturing space has more than doubled.

The number of people on the pay roll has increased from 150 employed here in Verona to more than 500, with another 50 employed in a new plant in Canada.

And gross sales have increased from $1.8 million to $8.9 million.

There are any number of factors concerned in the rapid growth, ranging from good management and heads-up engineering to the luck of having a product in demand at just the right time.

But high among the factors is automation.

The Carnes Corp. is an instance of a corporation that had to go to automation and where, for a time, automation put people out of work. But, in less than three years, the automated machines created a climate where more and more men and women were able to find jobs at Carnes.

And now the number of jobs has more than trebled.

The Carnes Corp. has had an interesting history. It began in a garage out on Helena St., in Madison, back in 1943. It was started by Wilbur Carnes, now Madison's 16th ward alderman. He was a good engineer, an ingenious operator, and he knew a good thing when he had it.

The "good thing" was a line of air distribution equipment—diffusers, grills, and registers which distributed air from central heating or air conditioning units evenly into rooms, plus a line of power ventilator equipment for exhausting air from buildings.

In Market at Good Time

He came on the market at a particularly good time. There was a vacuum in such equipment, and he was able to use the national distribution system of the air conditioner people for rapid growth all over the country.

The garage grew too small. Additions were made. In 1950, the plant

moved to Verona. The original small buildings were added to, time after time.

Then the inevitable happened.

Other firms noted what Carnes was doing. They entered into competition. As the competition strengthened, more and more attention had to be paid to cost in the now more competitive market.

In 1950 there were only five manufacturers in the country, a figure which was to grow to more than 50 today, with Carnes and two others in a tight tie for second place in the field.

Big Loss Factor

In 1957, Carnes sold out his interest in the company for more than $1 million, to the Dings Magnetic Separator Co. of Milwaukee. And, in view of the new highly competitive situation, the new management started some intensive cost accounting to find the weak and strong areas.

They found them in a hurry.

"We found that one of our main lines was operating at a 15 per cent loss," R. W. Krogstad, general manager, said.

There was some real soul searching in the next meeting of the board of directors. The loss couldn't be allowed to continue, for the line was a major part of the plant's output.

Nor could the line be dropped, for the same reason.

"We decided that the only answer lay in automation," Krogstad said.

Machine Pays for Itself

So the firm put in a conveyor system, costing $10,000. It paid for itself in three months. The management looked around for automated machines which could be bought and which would fit their operation.

And, when they couldn't find a machine, they designed one and had it made.

The new machines began to put people out of work. For two and a half years, employment was lower than when the Milwaukee group took over. But then, as the groundwork laid in those years began to take effect, it began to rise dramatically.

Automation was a part of the answer. Another big part was the realization of the management that it had to put out not only a product that would compete price-wise with their competitors, but also a better product.

More Engineers Hired

As a result, the engineering department was beefed up. From three engineers in 1957, the number has risen to 28. They work on such things

as simplifying the design of their product so that it can be automated more, and produced at a lower price.

They work on new machines which will increase automation.

And they work on a product which will work better and look better. As an example, the firm has put a considerable amount of money into one of the quiestest test rooms to be found in any manufacturing plant. Walk through the big door of a test room bigger than a haymow in the middle of the throbbing plant, pulsating with all of the noises of production, and you can all but hear your heartbeat.

When tests are being run, a register or grill will be fitted into one wall of the room, and air brought into the room through it. Then sensitive instruments determine how much noise is caused by this particular design as compared with another.

And the tests are done under formulae devised at Carnes which are rapidly being accepted as standards for the industry.

Some Jobs Can't Be Automated

In other rooms, grills and registers are testing to make sure that they give the best distribution of air to all parts of a room.

In the plant, there are some jobs that cannot be automated. Big discs of aluminum for diffusers or ventilators are still spun into forms where the desired designs are so varied or used so infrequently that to automate their manufacture would not be feasible.

As the flat discs spin on a shaft, skilled men with dual levers force the aluminum or steel over chucks to form the part into grills and registers in an old German process.

For centuries, spinning has been the best way to do this work, and the high degree of skill required cannot be automated.

But, in other parts of the plant, machines take seconds or minutes in doing jobs that would take human operators far more time.

"We're going in more for engineers than bolt twisters," Krogstad said. "Many of the tasks which we have eliminated for people are the more tiresome jobs."

The Final Score

But this final score remains:

The Carnes Corp. has used automation to create more jobs, and better jobs, in an industry which nationwide is creating still more jobs because of automation.

Another 400 more people are working at the Carnes Corp., due to automation.

And what would have happened if the firm had not gone to automation?

Krogstad shrugs his shoulders. It's anyone's guess.

But there is the possibility that the 150 jobs existing at that time would have gone down the drain of a failing firm, and that 550 people would be in other jobs, or looking for other jobs.

WOMAN AT WORK—Untouched by human hands, the bookkeeping machines shown above, in the Bank of Madison, are posting accounts in one of the most automated banks in Madison. And Pat Kaney can sit a moment while making sure that all's going well, rather than do all the work herself. —State Journal Photo

III

Automation in Bank Costs No Jobs

(Thursday, November 21, 1963)

When the Bank of Madison decided to go to automation, first in check sorting, they put the big new sorter in the lobby of the bank.

A comment that was made, from time to time, was:

"Huh, I suppose you're just trying to put people out of jobs!"

At the bank, they early learned to counter with:

"How'd you like to stand at a rack all day long, sorting checks into little boxes?"

And it was this reluctance of people to do this work which was a considerable reason for the bank to go to automation.

Can't Find People

"You just can't find competent people to do this work any more," Frank Saeman, controller of the data processing department, says.

"Eighty-five per cent of the girls go on to college, perhaps. They won't take such a job. The remaining 15 per cent go into various service jobs and, frankly, it's difficult to find the necessary abilities within this group."

The decision was based on more than the difficulty of finding people to do tedious work. The bank set up a four-point criteria, based on its effect on the customer, the community, the employe, and the stockholder, according to Paul Schroeder, president of the bank.

And, having determined that the change would be beneficial, the bank decided to spread the change over five years, to cushion its impact.

No Jobs Lost

So far, Schroeder said, no one has lost a job at the bank because of automation. And he doesn't feel anyone ever will.

You don't save any money in a bank through automation, Saeman says, but you do get the job done. And it's a job that is growing bigger every year.

Since the check sorter has gone in, the bank has also automated the bookkeeping department.

"We had four sorters and five bookkeepers," Saeman says, "Now we have six persons, plus the machines, doing the same work within this department."

But no persons have been let go because of the elimination of the three jobs. The three have been absorbed in less tedious or better paying jobs, for the growth of the bank has been considerable in recent years.

Deposit Growth Cited

Since the bank merged with the Union Trust Co. in 1956, the deposits have grown from some $16 million to between $36 and $40 million.

"And Madison is one of the check-writingest cities in the nation," Saeman noted. "We average about 14 checks per account per month, as against a national average of six to eight."

The automated check sorting and bookkeeping departments, now known as data processing, are on the third floor of the bank.

And it's a decided departure from the way things used to be.

At one time, workers on adding machines "proved" big batches of checks on adding machines, to check the totals; others sorted the checks and put them in alphabetical order, and bookkeepers flipped their ledger sheets into machines all day long, and made the proper entries.

'Iron Idiots'

Today, the incoming checks go to one of two women who "prove" the batches of checks by entering them in a new machine which not only adds up the totals but puts the account of the check down at the bottom in symbols which the sorter can read.

"The 'Iron Idiots,' " says Saeman of the sorters, "can not read your handwriting.

"That's why we have to use a special magnetic ink which prints the amount on the check, in the same manner that the account number and the bank number is already printed on your personal checks."

Next step is the sorter. Checks go through this machine at the rate of 750 a minute, traveling so fast to various compartments that they're just a blur.

There are nine compartments. Three are for the banks personal checks and three for the bank's business checks, in three alphabetical groupings. Another is for the Monona Grove State bank and another for the Hilldale State bank, whose sorting and bookkeeping is done here.

(The Bank of Madison was the first in Wisconsin, outside of Milwaukee, to automate check sorting. Other Madison banks are preparing checks

for automation, and generally will send them to Milwaukee each night for processing and return to Madison the next day.)

A final pocket is for rejects—the check that was badly printed, the check that went through folded and hence unreadable, and the like. These are checked by a human operator, and their numbers are small.

As the checks whir through, the sorter does a fantastically rapid job of checking each account number, to make sure that it's a valid number. Occasionally, the printer of the check makes a mistake. Or, if the account number is not on the check, it may have been put on by a special machine and the operater has made a mistake. You can check the number on your own check by multiplying the first numeral by eight, the second by seven, the third by six, and so forth, then adding the totals all together and dividing by 11.

If the number is valid, there will be no remainder, for 11 will go into the total an even number of times. If it won't, the number is not valid.

And the sorter does this with checks flitting past at the rate of 12½ per second, and does it in the 12 inches or so of travel between the reading head and the reject compartment!

Puts Them in Order

While the sorter is checking the account numbers and putting the checks in the proper compartments, it is also sending a continuous stream of information to the computer. It tells the computer, among other things, the amount of money to be withdrawn from each account number.

The checks, mind you, are not in alphabetical order. So the computer performs its feats of electronic legerdemain, and spews forth a tape on a high speed printer—so high speed that it prints 160 digits a second.

And now they come out in alphabetical order!

The tape then goes to one of three automatic bookkeeping machines. The ledger sheets, also in alphabetical order, are pushed up to the machines. The machine pulls a ledger sheet within it. If the tape finds it has a deposit to make, or a check to subtract, the machine gets the order, and the entry is made.

And the operator sits and watches, in contrast to the day when the bookkeepers bent over their jobs the day long as their fingers flew up and down the keys and their hands banged the total bars.

The customer has an interest in what's going on in this room, and it can be expressed in service charges.

"Our service charge is 10 cents a check," Saeman says. "The actual cost of handling a check, before automation, in the nation was 12 cents. We're able to continue the 10-cent charge, now that we're automated.

"But there are non-automated banks, particularly on the East coast, where they're charging 15 and 20 cents a check. And, without automation in this bank, it seems certain that we'd have to increase the service charge."

Can Do Other Things

The machines do other things. They can be made to tell the operators, via numbers on tapes, which account numbers have the last three digits alike, or within 30 of being alike. They can be told to disregard the fact that there is no bank number on a check, that it is vouched for by the human operator.

But telling the machine is a complicated operation. The directions may run into a formula expressed on a piece of tape several feet long, four inches wide, and completely filled with numbers—all of which have to be right.

"They're really stupid monsters," Saeman says, "but they'll do what you tell them to do. For instance, one bank got a little tired of reading a numeral '4' to indicate someone had transposed a figure, such as writing 23 for 32.

"So they commanded the machine to give them a written message instead, and told it what to say.

"And now the machine writes, **'Better luck next time, stupid!'** "

IV

Machines Replace, Improve 'Hello Girls'

(Sunday, November 24, 1963)

On Oct. 1, 1949, the last of the "hello girls" to handle local calls trooped out of the Madison office of the Wisconsin Telephone Co.

Behind them they left silent switchboards. No buzzing signals. No flashing lights. No people in the operators chairs where people had sat since 1884 when the telephone had come to Madison.

End of Era

It was the end of an era. The machines had won. Dials had beaten the "hello girls."

"You got a funny feeling," says Marion Batty, who was there. "That empty room. The quiet. The feeling that a machine could do your work. That you didn't count for much. It was a little scary."

How does she feel about it today, 14 years later?

"Oh, it's far better today," Miss Batty, now a chief operator, says primly.

"I wouldn't dream of going back. We're doing a better job. It's more interesting. There are more people . . ."

Huh? More people?

Sure, says Jack Mayer, Madison manager. The company is employing 24 per cent more people.

And that's the telephone company. It's a place of rapid change. There are lost jobs in one place. But new jobs have popped up in another. Machines have taken jobs here, and machines have created jobs there.

Here's a job that brought in somebody from another community, and there's a job that was created in another community to be considered in the bewildering picture of what—job-wise—has been happening.

Devices Clicking

And you wind up with the feeling that the biggest computer couldn't trace all of the ramifications and significance of what's been happening in the telephone system.

But come along and try, anyway.

Mayer stops at a door, and unlocks it. Inside, in the gloom, is a room filled with electronic devices on racks, clicking away like an army of robots, following the directions of dialing fingers all over Madison.

The little electronic gadgets, clicking their lives away and oblivious of watching humans, are making the local calls the "hello girls" used to make.

'Lucky They Are'

"They make 400,000 calls a day," says Mayer. "In the 'good old days,' it took a good operator to make 1,000 calls a day. These gadgets are doing the work of 400 good operators."

And it's lucky they are, says Mayer.

"It would be impossible to find 400 good operators to do this job," says Mayer. "We'd have to take just about every girl who graduates from high school and does not go on to college.

And frankly, not every one would meet our standards. They are getting higher each year, to meet the quality of service the public expects."

More than that, the increased volume of business is dependent upon automation, and automation in turn is making the job bigger each day.

101,904 Phones

Back in 1945, Madison had 34,490 telephones. Today the number has risen to 101,904, three times as many.

Back in 1945, there were 176,000 calls handled per day by the human operators. Today it's 413,000, a 134 per cent increase.

And, during that time the city has grown 55 per cent, so that the increase in number of phones and calls is more rapid than that of population.

But the employment growth of the company, though substantial, is not as rapid as that of the population growth of the city.

And this is where the machines make the difference.

1963 OPERATOR—This is the 1963 counterpart of yesterday's "hello girl" which handles your Madison telephone calls, as seen in the telephone company offices.

The device on the table is one of hundreds of such devices, on racks going from floor to ceiling, which takes care of some 400,000 such calls each day. —State Journal Photo by Ed Stein

Scores of Women

But where are these added people?

Mayer leads the way to one of two long distance rooms, where Miss Batty supervises scores of women in a room just like that of the "hello girls" of yesteryear.

The electronic gadgets sort of outsmarted themselves here, he says.

"We've been able to give the public better service, through automating the local calls and a good many of the long distance calls as well, through direct distance dialing," says Mayer.

"The result has been that the number of long distance calls has increased more than 400 per cent in the last 15 years or so. Not all of them can be handled by automation, such as person-to-person calls, where the operator has to make identification; calls to be charged to a third number; credit card calling, and others.

Operators Increase

And the number of operators on long distance has risen within the last five years by 25 per cent, from 250 to 311.

Don Brady, division operations manager, is proud of the cost to the patron.

"National surveys show that telephone service has risen less than half as much as other prices since 1939," he says. "Today it takes a wage earner only half as much time to earn enough for a phone in his home as it did in the early 1940s."

And that pattern, he is sure, is repeated in Madison.

100,000 Calls Daily

So how about the direct distance dialing equipment that's bringing the increase in human long distance operators?

It's in two of the top three floors added last year and this to the Fairchild St. building, where Nick Guerten is in charge of operations.

"We handle about 100,000 calls per day for an area that produces about half the calls of the state," says Guerten. "How many people do we have? Nine."

That doesn't seem like many, particularly since Miss Batty has said that a long distance operator can handle only about 125 calls per day, since they're more complicated than local calls.

On that basis, there ought to be 800 people up here.

"In the first place," says Brady, "where'd we get 800 people? In the second place, the big increases we've had here are dependent upon auto-

mation. Take it away, increase our charges to the customers, and we'd lose business."

The way long distance is being accepted, says Guerten, they're going to have to double the capacity of his direct distance dialing department next year, anyway.

Better Jobs

And almost certainly Miss Batty'll get more human workers in the jobs that the electronic devices can't do.

The nine people up here are doing jobs that never existed before, says Guerten, and they're among the better jobs and the better paid in the office here.

And Brady adds:

"One of the things you don't see, on the surface, is that we're moving to better jobs, that take more training and pay more money. More men are getting jobs here than ever before.

"When we went to dial, for instance, there were four salesmen on the road. Today, there are 45 going into businessmen's offices and showing them how our service can save them time and money.

Computers Talk

"A dentist's assistant, for instance, can put cards in a phone to ring the numbers of people whose appointments are coming up. A businessman can turn a single dial to a man's name, like you'd dial a record on a juke box, and the telephone will dial the number, in Madison or any place in the country.

"A Data-phone will let one computer talk to another, at the rate of a full book of 50,000 words in 45 seconds, and they predict that one day half of the phone lines will be filled with machines talking to machines.

"But . . . you get the idea."

Okay, let's see these complicated gadgets for direct distance dialing.

Your call comes first to a relay in a sender, says Guerten. It is about the size of a deck of cards, in racks that stretch from floor to ceiling. As the first numbers you dial come in, the relay whips off a message to a "marker" and goes on to take the rest of your numbers and remember them.

Tubes Flash

The marker looks like a Christmas tree of wires and tubes that go upward in Yule tree fashion. The tubes flash dull red in rapid blinks, which indicate that they are searching out the best route for your call and whipping the information back to the sender.

They find a route in half a second, if all goes well, and it usually does. If it doesn't go well, the marker trys a second time, again in a half second.

If it doesn't make it this time, it turns the job over to another marker and issues a call for human help, by flashing a light and ringing a bell to show it's in trouble.

And it is then that one of the men in one of the better jobs shows up.

If the marker is successful, it tells the sender, which then makes your call. Generally no more than 13 to 15 seconds have passed from the time you quit dialing until the bell starts ringing at the number you're calling.

Costs Reduced

"Back in the 1920's, it took an average of 10 minutes to make the call," says Mayer. "You were tempted to shout, because it was the equivalent of talking with someone 80 feet away. Today, with the development of new equipment, it's the equivalent of 6 feet.

"Back then, the call cost you $16.50, if it was coast-to-coast. Today that cost has been cut to $1.75, or $1 after 9 p.m.

"And that's automation for you."

As you stand in this room, electronic devices are doing many another job that people never did do.

Here's a gadget that goes to work at night, checking out 1,500 circuits each night, like elves working for the shoemaker in the storybooks, and leaving a list of circuits where trouble exists for the morning crew when it arrives.

Busiest Circuits Found

Over here relay keys are being depressed, as by invisible fingers, as the movement goes from row to row up to the ceiling. An electronic gadget is trying out the circuits, over and over, to determine which are the busiest, and where more capacity is needed.

Here's a man using a special "gun" to wrap wires around a connection so tight that the man with the soldering iron has lost this job, and been shifted to another. It was invented in the Bell laboratories.

On the other hand, look at all the transistors around. They were invented in the Bell laboratories a decade or so ago. They constitute a $1 billion a year industry, which makes jobs all over the country, including places in Madison outside the walls of the telephone office.

And the Bell system has spent more than $1 billion in research since 1920, and that has meant jobs by the hundreds, too.

Shift to Brains

Here's a microwave panel. Your calls to Dodgeville, Platteville, etc. go out over air waves, not on wires and poles. And what's happened to the man who set the poles, and serviced the wires?

He's lost his job, or a part of it, to the expert who knows the more technical job of caring for this equipment.

And Brady can point out that, in the move to better jobs in the entire telephone system in the country, the shift is to brains and more responsibility.

In the last five years in the nation, plant craftsmen went up by 18 per cent; supervisory employes by 17 per cent, and business office and sales employes by 15 per cent. And the fact that the payroll went up by 34 per cent reflects the better rates the firm can pay and the better jobs that have been created.

Hiring Patterns

This has been accompanied, Brady says, by changes in hiring patterns. The company has learned to cushion automation by hiring temporary help as automation occurs, and depending upon the naturally high attrition in an industry where women predominate, to lessen its impact.

And the firm is paying more attention to the workers who will be permanent. There was a time when a lineman's job was a career job. Today there are more linemen than ever before, but it's generally a stepping stone to a better job.

And the company wants to make sure that the individual they hire has that capacity to go ahead.

Growing Fast

Down in another rack is where the television programs come in, for sending to Madison stations for rebroadcast. This industry got its start on a national network basis through the inventiveness of the telephone system.

It's now a $4 billion a year industry. And that means jobs, lots of them, in Madison and all over the country.

And that's the telephone company for you, trying out every new technique that it can to do a better job faster and at less cost.

And growing so fast that no one, not even the biggest of the computers, can gauge its impact on the economy of Madison and the nation of which it is a part.

PUSH-BUTTON JOB—To put the ingredients together for a load of concrete in these days of automation, it is necessary only to put a card in the electronic device above and push the right buttons.

And, in 20 seconds, the job is done. Above, Ronald Sailing, Verona, is batching concrete in the absence of the regular operator.

The card which Sailing is placing in the machine is from the group on the wall, in which the "fingers" at the bottom tell the electronic batcher what proportions to use for the various mixes.

—State Journal Photo

V

Concrete Proof of Push-Button Gains

(Sunday, November 28, 1963)

A few years ago, the Janesville Sand and Gravel Co., of Janesville, was casting a speculative look at Madison.

Madison was booming with building. A lot of concrete was needed. They produced sand and gravel for concrete. But how to break into the Madison market with their own ready-mix business?

They found the key in merger and automation.

At the heart of their successful operation, in a merger with the Four Lakes Fuel and Supply Co., is an intricate device called a Butler Bin Model B-1 Push Card automatic batching system.

Push a queerly shaped card into its innards, set a dial or two, and push a button, and sand and gravel starts flowing from bins into hoppers where it's weighed, water and cement are added in just the right proportions, and in 20 seconds or so there's enough material to fill one of those transport trucks you see going down the streets, with its revolving load of concrete.

And it's done with a higher degree of accuracy, they say at Four Lakes, than any human being can do the job alone.

This means a better concrete, they say.

And, as the word gets around, it means more sales.

The man who runs the push card automatic batcher most of the time is Don Storkson, who is highly satisfied with the automatic batcher. He ought to be. It means a lot less work for him.

His "office" is in a little room on high stilts, under which the trucks run to be filled. It is warm. And dry. And he does his work by pushing buttons, rather than running his legs off, as he used to do.

By standing in the door of his "office," he can see the site of his former labors.

It's a big, squarish building between two railroad spur tracks. On one side as many as 16 cars of sand and gravel from Janesville can be unloaded to an underground pit each day. As the materials are unloaded, a

conveyor takes them to the top of the building. There they are channelled to the proper bin, in four grades.

Cat on the Roof

Each bin has a hopper bottom, with a weight hopper underneath. The four bins front on a walkway which Storkson once patrolled on a run.

When he got an order for concrete, he'd figure his proportions, then he'd start one bin to emptying into the weight hopper underneath. Then he'd dash to the next, keeping a concerned eye on the scale of the first weight hopper to make sure that he wasn't getting too much in it, then dash to the third.

It was strictly cat on a hot tin roof.

And if he got too much sand in one batch, he had to make the proper adjustments to get it just right. Then he emptied the weight hoppers via gravity to a conveyor belt below which took it to a mixer. There the water was added and the batch mixed before going to the truck.

It took seven or eight minutes before the concrete hit the truck. And, in addition to Storkson, there was a man on the mixer and a yard superintendent.

Special Card

Today, Storkson gets the order and picks one of the queerly shaped cards off a rack. It has been specially tailored to the customer's needs, by a specialist in Janesville. Storkson slips the card into the automatic batcher, and the card tells the electronic device what proportions of sand, two grades of gravel, cement, water, and whatever additives might be needed for this batch.

He sets a dial for the number of cubic yards he needs. Moisture is critical in concrete, for too much water in relation to cement can rob a batch of strength. So he checks a gadget that tells him how much moisture is in the sand, where most of the water lurks.

He sets a dial to this percentage figure, and now the machine will add just the right amount of water. An amber "Ready to Batch" light glows. He pushes a button, and looks at a bank of lights on his console.

If any of the weight hoppers has been overfilled, a red light for that bin in the upper bank will glow, and the amount will register on a scale above the console. If any weight hopper is underfilled, a light in the second bank will glow. If they're all all right, a bottom row of amber lights will glow.

Catches Error

If there's an error, and it's seldom there is, he can switch the device to manual operation and push a button to fill underfilled weight hoppers, or

set the bins to emptying and stop an overweight hopper at just the right time to hold back the surplus material.

And if he should get careless and overlook the warning lights. the "Batch" button won't depress and he'll have to look for the trouble.

On the average, he can have the concrete batch flowing to the truck in less than two minutes.

"By the use of this automated equipment, we can produce 140 cubic yards of concrete per hour, as compared with 40 yards under the old system," says Goodwin Lyons, Janesville, president of the Four Lakes plant.

"More than that, we're producing a better quality of concrete through virtual elimination of human error. The machine doesn't become preoccupied with its relations with its in-laws, staying out too late at a party the night before, or just plain being tired.

Does Job Faster

"It does the job that humans tell it to do and, assuming that we tell it to do the job right the first time, it does it time after time, without change and faster than a human being can do it."

And what's happened to the human factor?

Well, Storkson is still there, doing his batching from a warm, dry room with a push of the button rather than running up and down the formerly damp and poorly lit room with its bins and weight hoppers.

The man on the mixer in the old plant has lost that job, since the batches are now mixed in transit on new and larger trucks. But he has become the plant foreman.

Work Force Increases

And the man he replaced? He's gone on to become the plant foreman in the Midwest Concrete Corp. on the East side of Madison, a plant which is also a subsidiary of the Janesville Sand and Gravel Co., whose president is Ellis Jensen, also a regent of the University of Wisconsin.

"Actually, the work force in Madison has increased by more than 25 per cent since we went to automation," says Lyons.

"And that increase would not have been possible for us without automation."

HOW IT WORKS—This is the way the wieners stream out of the wiener tunnel at Oscar Mayer and Co. They march off a conveyor 10 abreast and, near the two workmen, the casings are stripped by sharp little knives in a machine which does a job which at one time employed as many as several hundred women in the plant. —State Journal Photo

VI

Oscar Mayer's Growth Is Automatic

(Sunday, December 1, 1963)

Mention automation at Oscar Mayer and Co., and all eyes turn toward the wiener tunnel.

At the head of the wiener tunnel stands one man, superintending 10 lines of wieners as they march into the tunnel.

A lot of mysterious and highly secret things happen to the wieners as they go through the tunnel, involving trade secrets competitors would like to know.

Hours to Minutes

They're gone from view for some 36 minutes, and then they march out the other end of the wiener tunnel, having completed in the 36 minutes a process that used to take 36 hours.

A couple of men check the marching wieners as they emerge.

And the tunnel in between is doing a job that was once back-breaking work for men.

Where Are Men?

Men used to scoop the meat into grinders, then scoop the ground meat into stuffers. Men used to operate the stuffers. Other men would put the wieners on "trees" and hang them in smoking chambers.

Now they don't. And what's happened to the people who have seen the machines take over their jobs?

Again, it's highly complicated. Again there's been a shift of people within the plant, as much as possible, and a cushioning of the changes through attrition where possible. Research has created new jobs. Yet . . . .

"We had 2,785 men and women in plant production in 1961," says Paul Bowman, Madison plant manager. "That was before the wiener tunnel was in operation. Today we have 2,787—two more."

Union's Concern

Across the street, in the building of the Amalgamated Meat Cutters and Butcher Workmen, Local 538, Cal Rush, the business manager, corroborates this when he says:

"The membership has stayed normal for the last three years, all right. It's now 2,700 in the plant.

"Our main concern, however, is for jobs for women. At lot of women's jobs have been lost, mainly the women who used to skin the wieners. The fact that our membership has stayed the same means that more men, and fewer women, are working at the plant."

This takes us back to the far end of the wiener tunnel, where the 10 lines of wieners march out, at the rate of 25,000 per hour, under the watchful eyes of the two men.

'Squeaky Wrist'

Oscar Mayer used to have some 200 women skinning wieners, jobs which no longer exist. Advancements in wiener technique created these jobs back in 1934, and the newest advancement has taken them away again.

Back in 1934, Oscar Mayer decided to leave the time honored technique of inserting the sausage meat inside a natural casing which was either tough for the customer to chew or hard to remove.

Mechanical Knives

They developed a cellulose material which could be stripped off before the wiener was sold to the customer. This job required women. It was tedious and monotonous, but it was a job. Women developed something they called "squeaky wrist," which was painful. And Oscar Mayer wanted a better process.

So now as the marching lines of wieners come out of the wiener tunnel, 10 sharp little knives slit their casings, and there have gone the jobs for the women.

More than that, a few years ago the quick fingers of women used to pick up the wieners and put them in a package, loosely packed and shippable only moderate distances.

Today, at the far end of the wiener tunnel, the wieners march along their production line to where vacuum gadgets drop down on them, pick them up 10 at a time, and put them in trays marching off at right angles and into a complicated device which automatically vacuum packs them in plastic wrappers.

In the process, there are 10 less jobs for women than there used to be

"And now we can ship them to much more distant markets," says Bowman. "Their shelf life is much longer. That means more work for this plant and more jobs for Madison people, buying the materials from the farm, trucking them to market, packing the product on cars for shipment, selling it to customers—there just isn't any end."

The women aren't at the end of the wiener tunnel, but new jobs have been created and old jobs enlarged.

And who can say exactly where the gain and loss is?

More Production

Rush, the labor man, points out that while the labor force hasn't been cut, there's a lot more production. And this new production is being accomplished with fewer people. The loss isn't so much in present jobs as the jobs of the future that the machines—not people—do.

The net sales of the company indicate growth. They were $270 million in 1962 as compared with $209 million 10 years before, or 29 per cent higher.

But they reflect the entire Oscar Mayer operation, with six plants and 15 distribution centers about the country.

Other Products

A more accurate figure, Bowman feels, is the plant production, where his figures show a 5 per cent rise.

And Rush points out that a part of the impact of the loss of women wiener stripping jobs has been taken up by the facts that the farmers are selling their meat animals the year 'round, and that Oscar Mayer is making more cold luncheon meat, more sausages in Saran plastic films.

Research Effort

To this, Oscar Mayer says, "Amen, and we planned it that way. It didn't just happen."

Back in 1941, Oscar Mayer established its first research laboratory in the Madison plant. They came up with the Chub pack machine for meats and sausage in 1949; the slice-pack for cold cuts in 1950, and the famous Smokie links in 1951.

All of them have created jobs for people in Madison.

And, probably more important, they have created a stability of work force.

"When I first came here," says Bowman, "it was normal to lay off 200 or 300 men at a crack, when the winter heavy kill had ended, for instance.

Summer Work

"So we sought out a means of creating summer work, so that we could keep people the year around. It's worked out quite well."

He stops, on a tour of the plant, at a Chub pack machine. Liver sausage under pressure, is coming out of a stainless steel tube and automatically being packaged in uniform plastic tubes.

"The machine does the work of the man who used to fill the stuffer, and the man who filled the casing, and the man who washed it and more," says Bowman.

Larger Market

"On the other hand, it means that we now can ship our product farther. When this company started in Chicago, back in 1883, the business was limited to the immediate neighborhood and a few miles beyond.

"Today, we're shipping these Chub-packs all over the nation, and to the military in Japan and Germany as well."

The new packing procedures mean that Oscar Mayer, which had been setting up packing plants in many parts of the country so that they'd be close to the people who'd eat their product, have now begun reversing this procedure.

The result is that there is more production coming back to Madison and more jobs here.

Machines Patented

But aren't there other jobs lost elsewhere by companies not as aggressive as Oscar Mayer? Possibly, but . . . who knows?

And another feature is that Oscar Mayer has patented some of these machines invented in their plant. Those plastic tubes of cookie dough you see on the grocery shelves are made on machines which saw the light of day thanks to Oscar Mayer.

They're creating more jobs, but how many no one can say.

There's another side to automation at Oscar Mayer and Co.—in the business office where computers whip through jobs in split seconds that once took hours or days.

There's a room filled with girls wearing telephone headsets, taking orders from salesmen working with 40,000 customers throughout the country. Here's an order from Philadelphia, for instance. The girl touches keys of a machine as the salesman "talks in" the order. A card comes out of the machine.

Electronic Orders

It goes to the next room, where a computer awaits. It whips out the order quick-as-a-wink in duplicate, printing the name of the customer, what he wants, how much of it he wants, and all the rest. The shipping room gets the order far faster than ever before. And the machine adds up the cost of so many wieners at so much a pound, etc., and gives the final total.

More than that, the computer is "remembering" all of the transactions. At the end of the day, it will tell the firm just how much of what they sold and at what prices.

Cost Figures

Nor is this all. During the day, they're adding all the costs of production into the machine. And at the end of the week, the machine will tell them the profit and loss on the entire operation.

It'll give them the profit and loss of each salesmen's route. It'll tell them what price they ought to pay for what cuts of meat. And, if they see a competitor without a computer paying too much, they just stay away from that particular meat.

In between times, it figures the payroll, and it makes adjustments in the recipes for such products as Smokie links so that each batch of meat—which differs from every other batch—will come out tasting the same.

Furthermore, the computer makes a lot of formerly executive decisions for the firm.

"We simply set up an acceptable range of decisions, and the computer makes them," says Bowman. "This weeds out a lot of the simpler decisions, and leaves humans more time for the more complicated ones."

Bigger Memory

The computer used to get along on a memory core capable of storing 20,000 bits of information. Now the old core stands in a corner, and a new memory with a capacity of 40,000 bits of information is going in.

The electronic gadgets, in their last improvement, do the work of 15 women. With a 15 per cent turnover each year, it's easy to make the change without much of any fuss through attrition. The jobs are gone. But . . .

"The profits in the meat packing industry are traditionally small," says Bowman. "In the entire industry, an average of eight-tenths of 1 per cent of each dollar of sales represents the net income.

Industry Leader

"Oscar Mayer last year netted 1 and six tenths of a cent per $1 sales to lead all the industry. We have led it for nine years, and it looks like the 10th year is coming up. This means that we can put more money into research and into equipment.

"And that, in turn, means that we can do just that much better job for our customers, for our stockholders, and for the people who work at our plant."

VII

Labor Looks at Automation

(Thursday, December 5, 1963)

Madison labor looks at automation from the standpoint of people more than any other group in the city.

For them, automation means a worker who has put in 25 or 30 years on the same job standing before the desk of a union business agent and explaining that a machine is now doing the work he used to do, and . . . where does he go from here?

"You can talk all you want to about automation being the harmless successor to the Industrial Revolution, the easy retraining of employes to better jobs, and the better life to come," says Marvin Brickson, president of the Madison Federation of Labor, AFL-CIO.

"But this is today, and here's a human being, with kids in school and a mortgage on his house, and there's nothing else that he can do."

Perhaps he should have gone to the Vocational school and learned new skills. But he didn't. And now he's out of work. Today.

Not As Hard Here

Fortunately for Madison, automation isn't hitting Madison's blue collar worker as hard here as it is in other places. For one thing, there aren't as many here as there are in other towns.

But labor here is fully aware of such statements as those of John I. Snyder, chairman and president of U.S. Industries, Inc., who says:

"Some four million of our people, or 5.5 per cent of our labor force, are without jobs. More than 2.5 million have completely exhausted all their employment benefits.

"At least one out of five people working today will almost certainly be unemployed some time during next year and upwards of 2.5 million will have to settle for part-time jobs because no full-time work will be available to them."

This sounds grim, and all the more so since Snyder is the chief executive officer of one of the country's leading manufacturers of automated

equipment for industry, trying to find a way to cushion the effects of the machines he's making.

'Quiet Firing'

"He says that 40,000 jobs are being eliminated by what is called 'quiet firing,' " says Brickson. "Actually, no one's fired. A person may be moved to another job in a growing business. He may be kept at his same salary on the new job that the machine is doing, but not replaced when he quits or retires. But then the job is gone."

And this, he says, is happening in Madison as far as many blue collar workers are concerned.

"Some of the union contracts being written in Madison now contain automation clauses," says Brickson. "The first one was the one for the Office Employes Local No. 39. But, while you can write into a contract that no one now on a job will lose that job, or lose a job with the same wages, because of automation, so far no one's written a contract that guarantees that that job will be filled in the future.

"And that's the danger of silent automation."

White Collar Jobs Hit

The Office Employes union, he says, contains some 300 or more members who work mainly for Madison Gas and Electric Co., CUNA Credit Union, and CUNA Mutual Insurance Society.

"In all the talk about automation and the blue collar worker, some people tend to forget that automation is hitting the white collar worker as well," says Brickson.

"At the heart of many job losses through automation, or silent automation, is the computer, and many of the jobs lost are in government work. When the United States Census was taken in 1950, it took 4,100 statisticians. By the time that the 1960 census was taken, many more computers were in operation and it took only 50 statisticians."

The reason he emphasizes this, he says, is that Madison—with its federal, state, county, and city pay rolls—has a lot of government employes.

"There are 85,400 non-farm members of the Dane county work force," says Brickson, "and 29,100—or more than one-third—are in government work."

The computers, he says, are causing a shift in the proportion of jobs held by women.

Team Solution Urged

The answers to the question of how to live with automation, he feels, must be sought by government, industry, and labor as a team, for no one can do the job alone.

And he feels that the benefits of automation, from the profit standpoint, will have to be spread past industry and to the workers in the form of shorter work week, longer vacations, increased pensions, and pensions at an earlier age.

The steelworking industry, he notes, is now granting 13-week sabbaticals every five years to senior workers, and the 35-hour week is more and more widely accepted.

In Madison, the 37½ hour week is entering the picture, but Brickson points out that it's been a long time since the last full five-hour drop in the work week.

"The 40-hour work week is now 30 years old," he says. "It came into the picture in 1933. Before that, the drop had been about five hours each decade back to the first of the century when the painters, for instance, worked as much as 70 hours a week.

"Their first contract here in Madison, for instance, was a 60 hour week and 20 cents an hour."

Twin Brother

Though automation has not had too much effect on many of the union men in town, its twin brother—technological change—has.

The carpenters are getting only about 60 per cent of the man-hours you'd expect, he says, due to such changes as power saws, power nailers, pre-hung doors, windows that come in units, and the like.

The need for common laborers has been tremendously reduced by cranes that lift materials once carried by men to the tops of buildings, power shovels that lift tons instead of pounds, or pumps that push plaster through pipes instead of having the man with hod carry it.

A typical story of technological change is that of Harold Rohr, business agent for the Painters Local Union 802.

"Take a look at the State Office building out at the Hill Farms" says Rohr. "We ought to have 15 or 20 men on that job for six months. What'd we have? Three for 11 months.

"Madison union painters got 33 man-months of work, instead of 120. Instead of working 10½ to 11 months a year, our painters are working around seven months.

"Sure, they make $3.73 an hour, but they average only about $5,000 a year."

Pre-Finished

What's making the difference?

"Everything's going pre-finished or plastic," says Rohr. "We used to paint a whole room. Now the floor is pre-finished tile, and the baseboard

is rubber and doesn't need a finish. The windows are aluminum and don't need paint, and the trim may be prefinished. The ceiling is probably acoustic tile, and finished. We're lucky to get from one to three side-walls to paint."

The painters local is attempting to get local suppliers to put in their prefinishing plants but, "it's rough when you have to compete with somebody getting maybe $2 an hour in a plant up at Wisconsin Rapids," says Rohr.

More than that, they're becoming acutely aware of the need for more education and better education for labor.

"There was a time when the strong back was all you needed for a job," says Brickson. "Well, it's no guarantee of a job today."

There are a limited number of apprenticeships open. The labor groups have set-up a high school diploma as one requisite to getting the best people for these few jobs.

"And that makes it tough on the high school drop-out," says Brickson.

VIII

Automation Vital to Insurance Firms

(Sunday, December 8, 1963)

Insurance is a big business in Madison.

There are 27 companies with home offices here. They employ thousands of persons directly; they give indirect employment to thousands more.

Automation is coming to these Madison companies on a big scale.

American Family Mutual Insurance Co. has a big room filled with electronic devices which are doing jobs that people used to do. They take automation pretty calmly.

Competitive Matter

For one thing, the insurance business is highly competitive. If they didn't use more machines, their competitors would and they'd suffer. Their employment would suffer, too, they say.

Since 1942, when the firm quit the old hand ledgers for the newest and best mechanical equipment, they've been growing.

"In 1942, we had an even 100 employes," says Robert Kelliher, director of office administration. "Today we have 820, in spite of all the labor saving machines we've added."

The newest change came a year ago in the form of an IBM 1410 computer which added 8,000 five-digit figures a second.

Sophisticated Gear

"A few years ago, we saw that we were going to have a problem getting out the work we could anticipate in another several years," says Kelliher. "Our RAMAC system just wasn't fast enough. To expand it would require another 55 clerical persons.

"And even then, our competition, with more sophisticated machines, would be able to do the work at a lower cost, and do a better and faster job for the customer in speed of work, accuracy, and the new types of policies for which rates could be so easily calculated on the new machines."

He gestures to the main work room of the insurance firm, where virtually no one's using a bookkeeping machine.

"We'd have to have that whole room filled with girls at bookkeeping machines and typing," he says, "if we didn't have this—computer and high speed printer."

Swift Printing

The printer takes about as much room as a desk at which a single typist would sit. It prints renewal notices, new policies, amended policies, and premium notices quite rapidly.

It prints typed material at a rate of 1,300 letters a second.

But how about the 55 clerical workers whose work the machines are now doing?

"Our growth has been such that no one has been laid off because of the machines," says Kelliher. "There's been shifting of jobs, but no separations of people from jobs."

Taped Information

Furthermore, says William Werner, supervisor of electronic data processing at the firm, the computer enables them to keep on top of their job as they never did before.

"These eight reels of tape," he says, "contain all of the vital information on our 760,000 policies—the name of the insured, his address, the name and year and model of his car, what coverage he has, and all the rest.

"The information is constantly changing, as you might expect. Among 760,000 insureds, there is constant changing of addresses, automobiles, coverage, and all the rest. And these master controls are up to date within hours."

How It Works

How's it done?

Each day, the 1,500 agents of the company write or phone in changes, along with new policies or orders to drop old policies. Underwriters decide whether to accept the new policies. Rates are applied. The information is punched into cards in code form. The cards whip through a machine, and a work tape comes out.

The master tape goes onto one machine, and the work tape on another. A new master tape emerges, with all the changes made.

"In three hours and five minutes, the entire job is done," says Werner. "By the next morning, we're up to date as of 4 p.m. the day before."

Premium Notices

The computer does a lot more than that. As it encounters a new policy on the work tape, it whips the information off in a new direction to emerge on a tape of its own.

Girls used to type out these policies, but now the high speed printer does the job.

The computer also takes care of premium notices amending policies, changing your address or makes of cars, or renewal notices.

There also is a machine in St. Joseph, Mo., that talks to a machine here.

THINK FACTORY—This is a scene in the electronic data processing room at American Family Insurance Company, where computers do the work of many people. In the background are the tape drives, by means of which information is put into and taken out of a big computer.

—State Journal Photo

American Family has a regional office in St. Joseph, and the St. Joseph office has a teleprocessing machine.

Telephone Report

They fit the day's business, in the form of punched cards, into the machine in St. Joseph. Electronic impulses travel a telephone line to Madison, and a similar machine in Madison punches identical cards here for the computer to work with.

Nor is this all. The computer assembles all sorts of information on command. If you want to know how much the losses are on 1954 Ford cars driven by rural youths between the ages of 18 and 21, the machine will tell you.

We're able to pinpoint losses so we can establish the highest premiums where they belong and, conversely, give the best possible rates to those good drivers of good cars who should get the benefit," says Kelliher.

They get the information in hours, instead of months, this enables them to beat competition or, at the least, keep up with it.

Programmers' Jobs

Telling the machine what to do is a job that requires the services of four people called programmers. It is an intricate job, and time consuming. The instruction to the computer to tell it what to do with the master tape, for instance, took most of one year for one man.

But has the mechanization resulted in long lines of women, particularly, at the personnel office, seeking jobs?

"Not that I notice," says Norbert Vanden Heuvel, personnel director. "Our basic requirements haven't changed much in recent years, and the numbers of persons seeking jobs has changed little in pattern."

Jobs Available

Just to make sure that the experience was general, a check was made with Clyde Selix, partner in Placements of Madison and Girl Friday.

"There's a shortage in Madison of well-qualified women for white collar jobs," says Selix. "One reason may be that, since World War II, the requirements for women may have been relaxed to the point where they've let training slip, or they just don't produce.

"The girl, however, who has a sense of responsibility, is an even moderately good typist, has a good job history, can spell, can punctuate, and can set up a letter by herself when the boss says, 'Tell Joe politely we don't want any' isn't going to have any trouble getting a job in Madison."

"As a matter of fact, if she can't get a good job in a week, she'd starve to death at a free picnic."

CPM

VT 006 161
Developments in the Community Employment Program.

Bureau of Employment Security, Washington, D.C.
MF AVAILABLE IN VT-ERIC SET.
Pub Date - 66 21p.

*ECONOMIC DEVELOPMENT; *COMMUNITY ORGANIZATIONS; *EMPLOYMENT SERVICES; EMPLOYMENT PROGRAMS; *COMMUNITY COOPERATION; COMMUNITY PLANNING; PROGRAM EFFECTIVENESS
USES; UNITED STATES EMPLOYMENT SERVICE

State and local office personnel of the Employment Service completed questionnaires describing their participation in community employment development (CED) groups and significant recent economic and social developments affecting employment, and they commented on their experiences with these groups. "CED groups" refers to the following kinds of organizations: Chambers of Commerce, area economic development committees, industrial development corporations which provide financial assistance and locate and develop industrial sites and facilities, private firms which have established full-time industrial economic development departments, and state and local government agencies conducting economic or area development activity. In 1965 local Employment Service representatives served as consultants to, or members of, a total of 2,578 CED groups. Other developments revealed by the survey were: (1) Coordination and consolidation of efforts improved the effectiveness of the CED groups, (2) The importance of manpower data to CED groups was evidenced by the number and variety of requests for such information, (3) Dynamic changes occurred in communities as a result of joint development efforts, (4) Communities focused attention on overall improvement, (5) Significant community development problems were identified, and (6) Development activities in many communities were based on broad planning, thorough treatment of local problems, and representative participation. Two tables give selected data for each state. See also VT 004 921 (ARM Summer 1969). (ET)

REPORT OF DEVELOPMENTS

COMMUNITY EMPLOYMENT PROGRAM

"Manpower policy, it is now evident, is as important in periods of high employment as when jobs are hard to find . . . It is an adjustable instrument which must be directed continually toward changing manpower problems that attend changing economic conditions . . ."

From *MANPOWER REPORT OF THE PRESIDENT,* March 1966

FOREWORD

This report helps to document the fact that almost every community experiences constantly shifting patterns of manpower supply and demand—imbalances caused by such factors as population growth, changes in defense procurement policies, changing technology and shifts in markets or consumer preferences. The Survey on which the report is based reflected dual pressures on many communities to deal with existing or emerging shortages of skilled workers while new employment opportunities must be found for the jobless. Community development groups which sought to reduce unemployment in the early 1960's need to work as diligently on manpower development and utilization programs to meet labor shortages in 1966. Thus the Federal-State employment security system must continue to stimulate and support organized community efforts to utilize human resources to the fullest.

Traditional employment service placement and manpower utilization services must be examined to insure their appropriateness to local needs and problems. Today's local office manager can play a major role in the community—can help it to identify its current and probable future imbalances, can alert it to the need for remedial and preventive action and if necessary can lead that action. Local ES staff perform inadequately if they merely play a role of serving applicants and employers who come to them.

Community activity, including ES participation, is required to help balance labor supply with demand. Such action may involve local public employment offices in recruiting or training programs to meet specific needs of employers or in conducting surveys to determine the availability of manpower, or participation in developing a comprehensive long-range program to meet the total manpower demands of area employers and the community's plans for general growth. Such action has helped community leaders to recognize that in attracting new industry and encouraging home industry to expand, it is important to improve every aspect of community life.

This report confirms the considerable contribution made to community development by public employment service offices. It also indicates the need to intensify our efforts as participants or leaders in community programs designed to resolve local economic and employment problems.

Frank H. Cassell, Director
United States Employment Service

REPORT OF DEVELOPMENTS COMMUNITY EMPLOYMENT PROGRAM

INTRODUCTION

The biennial national SURVEY OF STATE AGENCY AND LOCAL OFFICE PARTICIPATION IN COMMUNITY EMPLOYMENT DEVELOPMENT GROUPS was designed to measure the extent, variety and quality of employment services provided to local groups engaged in employment development activities. State agencies and the local public employment service offices completed questionnaires in which they described their participation in development groups, significant recent economic and social developments affecting employment, and commented on their experiences with these groups. Many of the reports also commented on predominant area problems which were encountered in the period covered—fiscal years 1964 and 1965.

The term "Community Employment Development Groups" (CED groups) is used to describe the following kinds of organizations:

Chambers of commerce . . .

Area economic development committees . . .

Industrial development corporations which provide financial assistance and locate and develop industrial sites and facilities . . .

Private firms, such as public utilities and railroads, which have established full-time industrial-economic development departments . . .

State and local government agencies conducting economic or area development activity . . .

This report, summarizing the survey questionnaires, should help State employment security agencies to evaluate the effectiveness of the Community Employment Programs conducted by the 2,000 local public employment offices and the 50 State central offices with guidance from the Bureau of Employment Security's regional offices. The questionnaire was designed, analyzed and reported by Ethel Polk under the direction of J. Dewey Coates, Chief of the Community Employment Development Branch of the Manpower Development and Utilization Division of the United States Employment Service.

221-725 O - 66 - 2

THE SURVEY REVEALED

GREATER PARTICIPATION BY EMPLOYMENT SERVICE OFFICES IN DEVELOPMENT GROUPS RESULTED IN INCREASED MANPOWER SERVICES TO COMMUNITIES . . .

RECOGNITION OF THE IMPORTANCE OF MANPOWER DATA BY COMMUNITY GROUPS WAS EVIDENCED BY THE NUMBER AND VARIETY OF REQUESTS FOR SUCH INFORMATION . . .

COORDINATION AND CONSOLIDATION OF EFFORTS IMPROVED THE EFFECTIVENESS OF DEVELOPMENT GROUPS . . .

DEVELOPMENT ACTIVITIES IN MANY COMMUNITIES WERE BASED ON BROAD PLANNING, THOROUGH TREATMENT OF LOCAL PROBLEMS AND REPRESENTATIVE PARTICIPATION . . .

DYNAMIC CHANGES OCCURRED IN COMMUNITIES AS A RESULT OF JOINT DEVELOPMENT EFFORTS . . .

COMMUNITIES FOCUSED ATTENTION ON OVERALL IMPROVEMENT . . .
SIGNIFICANT COMMUNITY DEVELOPMENT PROBLEMS WERE IDENTIFIED . . . . . .

GREATER PARTICIPATION BY EMPLOYMENT SERVICE OFFICES IN DEVELOPMENT GROUPS RESULTED IN INCREASED MANPOWER SERVICES TO COMMUNITIES. . .

Increased quality of local office participation is measured by intensified services to community groups. In 1965 local ES representatives served as consultants to, or members of, a total of 2,578 community development groups, compared with 1,846 in 1963, a 29% increase which enabled them to provide more services to community groups through more frequent consultation with development group officials. As members or consultants to CED groups, local employment service officials—

- provided area manpower information. . .
- analyzed emerging employment trends and developments. . .
- conducted special skill, wage and training needs surveys. . .
- recommended industries which could utilize manpower resources most effectively. . .
- suggested government programs to assist in resolving resource and facility deficiencies which retarded employment development. . .

NOTE: In addition to the above, area labor information was furnished, on a routine or nonroutine basis, to another 1,210 community groups. In 1,445 instances, the reporting local offices indicated that participation in community development groups had resulted in learning of new employment development opportunities. Additional instances were cited in which the local offices were approached directly by employers who were considering locating plants in the local office area.

RECOGNITION OF THE IMPORTANCE OF MANPOWER DATA BY COMMUNITY GROUPS WAS EVIDENCED BY THE NUMBER AND VARIETY OF REQUESTS FOR SUCH INFORMATION

The importance of manpower data is reflected in the predominant types of activity or services requested by CED groups. Many of the groups cited as requesting service or activity were served repeatedly in response to successive requests.

PREDOMINANT TYPES OF ACTIVITY OR SERVICE REQUESTED BY COMMUNITY EMPLOYMENT DEVELOPMENT GROUPS	*Number of groups cited as requesting service or activity*
Local office staff—	
1) *met with prospective new employers and provided appropriate manpower data and information on training potentialities of area labor*	1,606
2) *prepared replies to correspondence on manpower aspects of industrial-economic development*	1,756
3) *provided manpower information for economic development and community promotional publications for CED groups*	1,872
4) *conducted area skills or other manpower-data surveys for development purposes*	1,466
5) *participated in surveys conducted by private or academic research firms or groups on behalf of CED groups*	377

NOTE: In several instances, local ES officials prepared testimony on area manpower situations or appeared before municipal and county government agencies as manpower information resource persons.

COORDINATION AND CONSOLIDATION OF EFFORTS IMPROVED THE EFFECTIVENESS OF DEVELOPMENT GROUPS

144 statewide development organizations were identified . . .

290 regional groups were reported . . . These covered multicounty, multicity and some interstate areas . . .

500 groups were identified as coordinating economic development activity for varying sizes of areas . . .

In some instances regionalization helped eliminate unnecessary competition by bringing together areas with common economic, geographic, labor skill and other factors. In others it provided a balanced appeal to new industry as, for example, counties with industrial sites, power and transportation facilities merged their attractions with those of other counties having agricultural, recreational, tourist or educational assets.

As a result of the trend toward coordinated development activity and regionalized programs, many of the smaller groups were absorbed in consolidations with larger ones covering areas that have become normal labor force commuting areas.

Reports of coordinating groups throughout Pennsylvania, consolidations in commuting areas of California and regional development councils in Georgia helped to illustrate the reasons for the decrease of approximately 300 groups reported in 1965 compared with the 1963 total.

DEVELOPMENT ACTIVITIES IN MANY COMMUNITIES WERE BASED ON BROAD PLANNING, THOROUGH TREATMENT OF LOCAL PROBLEMS AND REPRESENTATIVE PARTICIPATION

Approximately 2,000 communities were identified as having comprehensive economic development programs. The value of the plans was indicated by the fact that many of these communities were making a special effort to keep these plans current.

Approximately 675 of the groups with ES participation were described as having either a board of directors or membership in which most major segments of the community were represented.

The survey reports identified 750 CED groups which arranged for Federal assistance for employment development purposes. Technical and financial assistance from State governments was also cited. Most frequently mentioned Federal assistance programs were training under the Manpower Development and Training Act; Accelerated Public Works Program with construction of public facilities; Area Redevelopment Administration loans and training; Small Business Administration loans and technical assistance.

From a Minnesota local office report—"With the advent of two Federal highways . . . also with expanded educational facilities including a 4-year college, the future looks bright for all kinds of industrial expansion . . ."

From a Washington local office report—"All members and consultants are working together in preparing economic development of the area, particularly in attempting to get Federal aid for the construction of the Wynoochee River Dam. Attempts are being made to consolidate several city water systems . . . for more efficient use . . . . Increased employment of nearly 1,000 is indicated . . ."

EXAMPLES

A Cross-Country Sampling of Survey Reports Illustrates Types of Local Employment Office Participation in Community Groups . . .

OREGON: Local office helped organize a "Local Agency Resources Committee . . . to correlate services of all local governmental agencies . . . to develop programs to better serve the community."

CALIFORNIA: Local office's role in recruiting, selecting testing, referring trainees for a new company "was a prime factor in the retention of the company in town" during its second year of operations.

ARIZONA: Local office manager is chairman of the Industrial Development Committee of the Chamber of Commerce. Often attends meetings as proxy for Chamber manager and "makes valuable contacts for the (ES) Agency" . . .

WASHINGTON: Local office stimulated community's activity before an Air Force Base closing. A wage and occupational survey by the State employment security department and the local committee's plans indicate that a reemployment crisis will be averted.

IDAHO: Local office answers all mail requests for Chamber of Commerce on area labor information, types of jobs available, occupational surveys, industry survey summary reports . . . "anything to do with manpower . . ." The consolidation of development efforts resulted in the Chamber's having additional funds and staff to advance economic development.

ALABAMA: Local office and Chamber of Commerce cooperated in achieving reopening of a local plant. Success, and expansion of other local industry followed after joint clinics were sponsored, instructing community business leaders on how to obtain government contracts and other technical assistance.

WISCONSIN: Local office in rural-recreational community is helping Chamber of Commerce in successful promotion of area for conventions. With ample tourist accommodations, service trades employment is expanding as facilities are used more fully.

ILLINOIS: Local office manager is a member of a 14-county Regional Resources Committee. Decreased agricultural employment is being offset by boosting the local economy through increased tourism.

MAINE: Local office stimulated effort by community to convert a closing Air Force Base into an industrial park. ARA and MDTA training helped prepare displaced workers for new employers; new vocational training facilities also were developed.

MASSACHUSETTS: Local office manager is chairman of the Chamber of Commerce's Expanding Industry Committee. He recently generated action that resulted in consideration of a local site by the Atomic Energy Commission for a new facility.

NEW YORK: Local office at Canadian border assisted a Canadian firm to locate on the U.S. side, also handled staffing "including preparation of forms for importation of key personnel." Another New York local office is providing area labor information in a 6-month study of 12 firms to "help diversify the economy and broaden employment opportunities by developing new products and markets . . ."

PENNSYLVANIA: Local office, working with the Industrial Fund, helped create about 900 new jobs. The local office surveys firms' plants regularly, recommends appropriate types of training. Development coordination helped change the area from a one-industry town to diversified manufacturing; worker exodus has stopped, population is increasing and unemployment is lowest in years.

GEORGIA: Local office helped "sell the community" to a new company when the town's largest employer closed, displacing 150 workers. The local office processed the new company's work force. Company satisfaction was demonstrated tangibly in an expansion which increased employment to 300. All the people now employed were placed by the local office.

DYNAMIC CHANGES OCCURRED IN COMMUNITIES AS A RESULT OF JOINT DEVELOPMENT EFFORTS

The scope and scale of community developments that influence manpower development and utilization were indicated by the field response to the optional request for an enumeration of significant recent local developments in the CED groups areas:

Industry moving in	1,146	New vocational education facilities	448
Home industry expanding	1,020	Urban renewal	348
Nonmanufacturing industry expanding	674	New colleges, universities**	290
New or expanded recreation-tourism	672	New uses for area resources***	144
New public schools	668	Research centers	124
Increased service trades employment*	537	New laboratories	122

*Service trades with increased employment included: Appliance, TV, auto repair, air conditioning sales, service, repair; restaurants, hotels, motels, schools, health, hospital, medical, dental, mental health—maintainance and technical aides—laboratory technicians; merchandising; recreation leadership and services; barber and beauty shops.

**New colleges and universities include references to substantial expansion of existing institutions and community colleges.

***New uses for wood and chemical byproducts led the list.

COMMUNITIES FOCUSED ATTENTION ON OVERALL IMPROVEMENT . . .

More attention than ever before was focused on the quality of community schools, homes, recreation, medical and health facilities, streets, parking, cultural resources. Community improvements, undertaken to avoid loss of home industry and to attract new industry, were recognized for their further importance. The process of community improvement inevitably resulted in increased job opportunities.

Many communities continued to develop new sites, industrial parks, and other concrete incentives for new business and industry. Downtown, central city improvements and developments began to match the growth of suburbs.

SIGNIFICANT COMMUNITY DEVELOPMENT PROBLEMS WERE IDENTIFIED

Layoffs—Leading the list of community setbacks were references to plants moving, cutbacks in defense-related employment, displacements based on technological or methods changes.

Shortages of skilled manpower—Reports from all regions identified skilled manpower shortages. In communities where local office participation with CED groups was minimal, a tendency to equate skilled job vacancies with adverse developments was observed. Other local offices saw the shortages as an opportunity.

Other inhibiting factors listed most frequently included: the need for improved public transportation, road construction and improvement, water resources and distribution systems, vocational education facilities; the adverse effects of taxation on industrial location; bond issues voted down; inadequate State or local finances to support development activity; shortage of convenient industrial sites.

TABLE NUMBER ONE—STATE-LOCAL EMPLOYMENT SERVICES PARTICIPATION IN COMMUNITY EMPLOYMENT DEVELOPMENT GROUPS

STATES BY REGION	TOTAL NO. CED GROUPS REPORTED		GROUPS WITH STATE-LOCAL ES PARTICIPATION		TYPES OF PARTICIPATION					
					MEMBER		CONSULTANT		AREA LABOR INFORMATION	
U.S. TOTAL	**3,992**	**Regional Total**	**3,788**	**Regional Total**	**746**	**Regional Total**	**1,832**	**Regional Total**	**1,210**	**Regional Total**

COMMUNITY EMPLOYMENT PROGRAM

DIRECTIONAL SIGNALS—1966

"(The ES) should assist in efforts to strengthen community economic development activities. . . ."

". . . The growing demands upon the Employment Service for comprehensive manpower services call for personnel with a more complex set of skills than previously required. . . . Local office managers are much more deeply involved in working with community groups to initiate and implement a variety of programs."

"The efficient use of these (manpower) services is thwarted, however, by the fact that they are too often provided on a piecemeal basis that overlooks the close interrelationships among the component parts of a manpower program. . . ."

". . . skill shortages are appearing and these highlight the need for more effective ways of linking people and jobs."

". . . The importance of the Employment Service stems from the fact that, in carrying out its responsibilities and functions, it interlocks with a diversity of public and private institutions. . . . In addition, by offering a wide range of services, the Employment Service can stimulate higher standards of performance on the part of other intermediaries that are active in the labor market."

*HEALTH OCCUPATIONS EDUCATION; *PRACTICAL NURSES; *EDUCATIONAL FACILITIES; *PHYSICAL FACILITIES; *FACILITY GUIDELINES; FACILITY REQUIREMENTS; COURSE DESCRIPTIONS; EQUIPMENT
FLORIDA

Intended as a guide in planning construction of new facilities or expansion of existing ones, the specifications were designed for a maximum enrollment of 60 students, and adjustments are necessary for smaller schools. On the basis of the activities which take place within preparatory and supplementary programs, the following areas and estimated space requirements are designated: (1) A 750 square foot lecture-demonstration room including a teaching station, demonstration area, student seating area, and storage space, (2) a 375 square foot general classroom, (3) a 2,000 square foot nursing arts laboratory, including areas for student practice in patient care, dressing cubicles, and medicine, utility, and storage areas, (4) a 300 square foot library with study space, (5) a 200 square foot student area with washrooms and a lounge, and (6) a 650 square foot student faculty area with offices, a conference room, a lounge, and storage space. Furnishings and teaching equipment are specified and guidelines are offered for the arrangement and location of the nursing suite. A guide for developing an agreement between the school and a hospital providing facilities is also included. (JK)

EDUCATIONAL SPECIFICATIONS FOR PRACTICAL NURSING FACILITIES

I. Introductory Statement:

These educational specifications are intended to be used as a guide for those contemplating the construction of new practical nursing facilities or the expansion of existing programs. The suggested facility design may be adapted to meet a program's particular needs.

It is hoped that the materials presented in this monograph will be useful in understanding the characteristics and special needs of this type of nursing program. The U. S. Public Health Service Publication, Nursing Education Facilities, 1964, was used as a source for programming considerations and architectural guide in the development of these specifications. The School Plant Planning Services, State Department of Education has given valuable assistance in the development of this material and prepared the space relation diagram to conform to these specifications.

These specifications have been designed for a practical nursing school admitting two classes a year of 30 students each or with a maximum enrollment at any one time of 60 students. Schools admitting smaller classes or only one class annually will need to make adjustments in these specifications. In any plan developed consideration should be given for future expansion of the program. Usually 75-80% of all students admitted can be expected to complete the course. For a school of this size there should be a full-time registered nurse faculty of four, one of whom is designated as an instructor-coordinator of the program. In addition to the nursing faculty the services of a full-time secretary will be needed.

II. Purpose for Which These Facilities Will Be Used:

The practical nursing facilities are used to provide both preparatory and supplementary training in all phases of practical nursing which involve learning how to function within the two accepted roles of the practical nurse; namely, (1) to plan and give nursing care, with self-direction, to selected individuals in various nursing situations that are relatively free of complexity and (2) to learn to assist the registered nurse in the more complex nursing situations.

The maximum utilization of the practical nursing facilities should be planned for two types of classes, preparatory and supplementary.

1. Preparatory classes. Preparatory classes are organized to train persons for gainful employment as practical nurses. These classes operate on the regular six hour vocational school day, five days a week.

2. Supplementary classes. Supplementary classes are organized for employed licensed practical nurses to extend their knowledge and improve their skills in the employment situation. These classes are usually conducted after regular school hours and between the hours of 6:30 and 10:00 p.m.

III. Teacher Pupil Ratio:

The teacher-pupil ratio should not exceed 15 students per teacher, nor be less than 10.

IV. The Instructional Program (Preparatory):

A. General Plan of Instruction

The practical nursing course is one year in length (12 months) and includes classroom and laboratory instruction as well as supervised patient care and correlated instruction. Instruction is carried out in both the school classroom situation and/or in one or more cooperating hospitals or related institutions.

B. Legal Authority for Operating a Preparatory Program

The licensing authority, the Florida State Board of Nursing, must approve all practical nursing schools. This responsibility is assigned to this Board by law (Florida Statutes, Chapter 464.18(2) which reads as follows: "Any institution which desires to conduct a school for the training of practical nurses shall apply to the board and submit evidence that it is prepared to give a program approved by the board of not less than twelve months which shall meet the standards prescribed by this chapter and by the board for the training of practical nurses". This approval admits graduates to the examination for licensure as a practical nurse. Licensure is required to practice nursing in this state.

C. Description of the Preparatory Course (Program)

The primary aim of this program is to prepare graduates to become licensed as practical nurses and be able to function effectively in the occupation.

Curriculum: As described below the curriculum includes both classroom and clinical (hospital) learning experiences. The correlation of classroom and clinical experiences is so planned as to ensure an educational sound program for the student. A Curriculum Guide for Practical Nurse Education, Bulletin 77F-2, State Department of Education, 1962, is used throughout the state and is the basis for the following course descriptions.

a. Course Description (classroom)

1. Vocational Adjustments: A course designed to relate the importance of effective human relationships to the occupations of practical nursing; it also emphasizes the role(s) of the practical nurse in today's nursing care pointing out the obligations and legal responsibilities involved in these functions. Employment opportunities and means for continued vocational improvement are likewise included.

2. Individual, Family and Community Health: A foundation course designed to establish the meaning of health showing its significance for the individual, the family and the community in the prevention and control of illness. It serves as a natural forerunner to the study of disease and infirmity.

3. Nutrition: Adequate nutrition plays an important role in the maintenance of health. This course shows the relationship of food to optimum physical and mental health of the individual throughout the life span accounting for needs of people in varying age groups. Dietary modifications serving as therapeutic measures during illness are incorporated with the study of such illness later in the program.

4. Life Span: This course is designed to show the processes of human growth, development and change that influences individual physical, mental and emotional health from birth on. It serves as foundation knowledge in better understanding human behavior during illness.

5. Body Structure and Function: General knowledge of the normal structure and function of the human body is prerequisite to understanding body reactions to disorder, infirmity and disease. This course lays a foundation for such understanding through presentation of selected facts and concepts appropriate for the practical nurse in rendering safe nursing care.

6. Nursing Fundamentals: This course is designed to be taught in correlation with the above course. Special emphasis is placed upon gaining beginning skills in meeting the needs of patients in all age groups and in varying degrees of dependency upon the nurse for assistance.

7. Drugs: This course purports to introduce selected drug knowledge related to classifying, safe handling, preparing, and administering drugs in general. Specific emphasis on the therapeutic use of drugs is incorporated into the study of illnesses later in the program.

8. Nursing Needs of People In Illness: This course is an extension of the course in Nursing Fundamentals. It serves as a plateau of knowledge and understanding which ready the student for later concentrated study of selected patients(all age groups) with so-called medical-surgical disorders.

9. Medical-Surgical Nursing: This is the longest course in the curriculum and is designed to point out the nursing needs of patients with a variety of illnesses and show how these needs are met. Emphasis is placed upon the commonality factors among all patients showing how age, the type of illness and the stage of patient dependency influence the assistance given by the nurse.

10. Maternal and New-born Care: The emphasis in this course is upon the general needs of the mother during pregnancy and her special needs during labor and following delivery. Likewise it includes the special needs of the new-born upon and following delivery.

b. Clinical Practice (hospital learning experience)

Practice is a vital part of the curriculum. Every effort is made to correlate (by selection of experience) patient practice with classroom learning experiences to ensure the most effective learning for the student. Instructors select patients, and guide and teach students with their learning needs in mind. Here, as in the classroom, the commitment is to the student.

Instruction includes group and individual teaching; it may be conducted in the classroom and/or clinical area. Clinical learning experiences include the care of patients in all age groups and with varying disorders and degrees of infirmity. Introduction to the patient comes early in the program and this patient contact is broadened and deepened as the program progresses. The faculty is mindful that the learner begins with simple, uncluttered patient situations and moves along a logically planned sequence of patient experiences if the student is to receive maximum benefit from the program.

Clinical learning experiences include the nursing care of:

1. Individuals (all age groups) with common medical-surgical conditions representing acute, chronic and long term disabilities. (This includes the elderly and children).

2. Mothers and new-born infants.

Learning experiences focus on direct nursing care and every effort is made to arrange these experiences in a logical sequence that demonstrates continuity of patient care and that adheres to sound educational practices. The beginning phases of the curriculum and some continuing phases of it are taught in the school facilities where demonstration and practice in some of the related skills can be learned. Concurrent, meaningful application of theory to practice is accomplished through early introduction of the student to the clinical area, and on a gradual basis for appropriate experiences under the direction and supervision of instructors employed by the school. In this way the intent of the program; namely, to prepare a beginning patient-side practical nurse practitioner who is capable of rendering safe, effective patient care within his/her defined roles of practice is accomplished.

D. Activities Which Will Take Place in This Facility (School)

1. Preparatory Courses

The teacher's activities include the following:

a. Planning and preparing for teaching; developing course and unit outlines, lesson plans, instructional materials and evaluation instruments.

b. Counseling of students.

c. Teaching knowledge and skills involved in the occupation.

d. Supervising student practice in the performance of skills.

e. Interviewing applicants.

f. Preparing reports and maintaining records.

g. Planning for and participating in general and departmental faculty meetings.

The student activities include the following:

Students spend about 2/3 of the time in basic and related learnings and the balance of the time in practice in the laboratory. Instruction is on both an individual and group basis. Students read and study assignments, learn problem solving, participate in class discussions and learn to meet the patient's needs by rendering patient care in hypothetical classroom situations. During these times some students play the role of "patient".

2. Supplementary Courses

The activities of the teachers and students in supplementary courses as related to the teaching of students are essentially the same, but to a lesser degree of involvement. Not all of the activities of teachers enumerated above would take place in conducting supplementary courses.

V. Facilities Needed:

A. Identification of Space Needed for Practical Nursing Department

The space needed is as follows:

1. Lecture-demonstration room (to include a teaching station, demonstration area, student seating area and storage).

2. Classroom, general.

3. Nursing arts laboratory (multipurpose room to include areas for student practice in patient care, dressing cubicles, medicine, utility and storage areas).

4. Library (reference reading and study room).

5. Student areas (to include women's and men's washroom and student lounge).

6. Faculty areas (to include teacher offices, conference room, teachers' lounge and storage).

B. Estimated Space for the Program:

Space	Square Feet
Lecture-Demonstration Room	750
Classroom	375
Nursing Arts Laboratory	2000
Library	300
Student Areas	200
Faculty Areas	650
Estimated total	4639 square feet

C. Description of the Space Needed (with approximate size and the major items of equipment and/or furniture in each area of space identified above):

1. Lecture-Demonstration Room. Allow 25 square feet per student or approximately 750 square feet for 30 students.

This classroom is to contain:

a. A teaching station at the front of the room with provisions for:

(1) Anatomical charts, 42" x 72" (15) in simplex wall case mounting. Each chart on removable spring-roller unit.
(2) Chalkboard 3 x 12 feet, but maybe as much as room will accommodate.
(3) Map rail to support diagrams and charts.
(4) Projection screen 50" x 37", either mounted on the wall above charts or in the ceiling.
(5) Skeleton cabinet 18" x 18" x 72".
(6) Table on wheels for torso 35" x 18".
(7) Tackboard 6' x 3'.
(8) Teacher's desk 42" x 30" x 3'.
(9) Teacher chair.

b. A demonstration area which is to include:

(1) One adult bed 6' x 3'.
(2) One bedside cabinet 21" x 16".
(3) One bedside chair 18" x 15".
(4) One lavatory 19" x 18".

c. Student seating area:

Either movable adult desk arm chairs, equipped with hinged or removable desk support for writing or seating around small tables. If tables are used, straight chairs will be needed. Ten percent of the chairs should be for left-handed persons.

d. Storage:

A storage closet for storage of full-scale models of the human body, and projection equipment, such as movie projector, overhead projector and/or film strip projector. Approximately 40 square feet.

e. Space to use projectors and stands.

2. Classroom (general). This classroom should accommodate from 15-20 students. It should be separated from the lecture-demonstration room by means of a folding partition which should preferably stack up on a wall alcove designed for this purpose. The partition should be selected for maximum sound-retardant properties. This smaller classroom will permit flexible scheduling for the practical nursing

program that admits two classes a year and at times might be used for a closely related health occupations program such as surgical technician.

This classroom is to contain:

a. Anatomical chart rack 72" x 42" for 14 charts (like the one in the lecture-demonstration room).

b. Chalkboard 3'x 12" (minimum)(like the one in the lecture-demonstration room).

c. Tackboard 6'x 3'.

d. Seating for a maximum of 20 students, in movable desk chairs.

e. Two lavatories with foot or knee controls for hand-washing demonstration and practice if a surgical technician program is anticipated later.

3. Nursing Arts Laboratory: For this multipurpose room allow approximately 2000 square feet for a laboratory with 8 beds.

This laboratory is used for student practice of patient care. It should simulate a "patient-care" area in a hospital and include the following:

a. Patient-care area:

(1) One adult size bed for each 4 students. (Beds are 6'x3') Allow a minimum of 8 beds for a class of 30 students.
(2) One bedside cabinet for each bed. (Cabinets are 21" x 16").
(3) One bedside chair for each bed.

In planning the space needed for patient-care area, allow 4' between beds to accommodate bedside cabinet and give ample work space; allow 8' for length of bed to permit working space at end of bed. This will require 56 square feet for one bed. If beds are placed on both sides of the room and oppose each other allow a minimum of 4' between the foot of the beds. These units need to be separated by curtains suspended from ceiling curtain tracks.

(4) One bassinet 33" x 17½".
(5) One child's crib 27" x 42".
(6) One overbed pedestal table for each bed.

b. Dressing area (for changing clothes):

Four dressing cubicles, each $3\frac{1}{2}$' wide x 5' long x $5\frac{1}{2}$' high with curtain, shelf, stool and hangers.

c. Medicine preparation area:

(1) Medicine preparation installation, $35\frac{1}{4}$" wide, 24" front to back to include counter with sink, and storage cabinets below. Hot and cold water should be provided for this area.

d. Other major items of equipment:

(1) Combination stove and refrigerator 2' x 2' or a small stove and small refrigerator may be provided.
(2) Midget charting desk to accommodate 18 charts and two persons. 30' depth; 33 3/4' width.
(3) Scales, platform, upright $10\frac{1}{2}$" x $14\frac{1}{2}$".
(4) Surgical dressing cart 33" x 18".
(5) Stretcher.
(6) Treatment cart on wheels 40" x $22\frac{1}{2}$" with 2 shelves (edges turned up).
(7) Wheel chair.

e. Utility area (approximately 50 square feet of space):

(1) Double sink with work counter on each side, storage cabinets underneath and wall cabinets above (approximately 10' x 12'), and sink with hot and cold water faucets.
(2) One hopper 20" x 28" with bed pan flusher. Hopper to have hot and cold water.
(3) One linen hamper 25" diameter.

f. Storage closet (approximately 40 square feet of space):

This closet is for the storage of linen and equipment. It should have wide adjustable shelves on three sides (to accommodate different size equipment) and enough free space to store some movable equipment such as wheelchair, etc.

g. Chalkboard. 3' x 12'

h. Tackboard. 6' x 3'.

i. Student conference area (approximately 575 square feet): This area should accommodate one-half of a single class (15-16) for seating at tables for group discussion.

4. Library (reference reading and study room): (Approximately 300 square feet) Allow 20-25 square feet per student.

This room should accommodate one-half of a single class (15-16) around study tables. It is to house special reference and periodicals used in the instructional program.

It is to contain:

a. Two library tables 72" x 30".

b. Fifteen straight chairs.

c. Book shelves on two or three walls to accommodate 200 or more volumes.

d. Vertical files.

e. Magazine rack 21½" x10"

f. Tackboard 3' x 6'.

5. Student Area:

The following areas are to be included:

a. Women's washroom to contain:

(1) Two waterclosets
(2) Two lavatories

b. Men's washroom to contain:

(1) One watercloset
(2) One lavatory

c. Student lounge to contain:

(1) One cot or sofa
(2) Three occasional chairs
(3) One dressing table with mirror
(4) Thirty individual lockers, 1' x 1' x 1'
(5) One coat closet or rack for hanging outside wraps. 6' x 2'.

6. Faculty Areas: (approximately 650 square feet).

The faculty areas are necessary for the activities of teachers in preparing for instruction, recruiting and interviewing applicants, testing, maintenance of records, making reports and holding conference with students. Four full-time staff members will regularly use this area. Space should be provided in this area for a secretary, preferably adjoining a faculty office or else in one of the faculty offices.

a. One office of 100 square feet for each faculty member.

Each office is to contain:

(1) One executive-type desk, 60" x 30".
(2) One desk chair, swivel type.
(3) One legal-size metal locker four drawer file $28\frac{1}{2}$" x 15" x 52".
(4) One or two occasional arm chairs 22" x 22".

b. Conference room(for faculty).

This room is to contain:

(1) One table to accommodate six persons.
(2) Six straight chairs, arm type.
(3) One bookcase on one wall.

c. Lounge.

The lounge should include:

(1) Four occasional chairs, 22" x 22"
(2) One dressing table with mirror
(3) One Chaise lounge
(4) One bathroom, containing one toilet and one lavatory.

d. Storage Closet.

This closet should be about $2\frac{1}{2}$' x 5' and shelved. It is to be used for the storage of instructional materials.

D. Special Facility Considerations:

In planning the Practical Nurse Education Suite, the following points need to be considered:

1. Effective Vocational Education needs to be taught in a facility with equipment similar to the actual conditions to be found by the graduates in a modern work situation. The over-all approach to planning for the Practical Nurse Education Suite should be from the point-of-view that it will insofar as possible simulate hospital conditions.

2. The colors for the walls, ceilings and floors for each space will need to be selected with color dynamics in mind.

3. The floor covering for all areas except the utility room and bathroom should be rubber plastic tile throughout.

4. Lighting should be flourescent, 70-100 feet candles in the instructional areas and offices.

5. Central air conditioning and heating need to be provided.

6. 220 and 110 electrical volt outlets are needed, including

   (a) 220 volt outlet for the stove and refrigerator if the school desires this equipment.

   (b) 110 volt outlets in lecture-demonstration and general classroom, also in the Nursing Arts Laboratory, over medicine counter, in each wall in each room, office, library and lounge. Outlets in Lecture-Demonstration and general classroom should be for projection equipment.

7. Hot and cold water faucets are essential. If hot water is not to be furnished by a central system, a hot water heater will be needed to service this suite.

8. Visitors to the Practical Nurse Education Suite should not have direct access to the classroom or Nursing Arts Laboratory. An entrance foyer, perhaps near the teacher offices, is needed.

9. Door (and traffic lane) between the classroom and the Nursing Arts Laboratory need to be wide enough to permit passage of adult size bed and should be 3' - 8".

VI. Relationship of the Practical Nursing Suite to Other Health Occupations Offerings at the School:

A. If other health occupations programs are offered by the school placing them in close proximity to the practical nursing facility is recommended.

If the school plans to have two beginning classes of thirty students each using the facility at the same time then the general classroom in these specifications should be enlarged and set up like the lecture-demonstration room. Another Nursing Arts Laboratory should be provided.

The Practical Nurse Education Suite needs to be away from disturbing noises created by some types of shops.

B. Relationship of the Practical Nurse Suite to the Site:

Students go from the school to the cooperating hospitals frequently and return. For this reason this facility should have ready access to parking areas and to prevent loss of time it would be well to plan it on the first floor thus avoiding the necessity of elevator services.

VII. Diagram of Space Relations for School Facility:

in the care of patients in accordance with the provisions set

forth in this agreement.

III. GENERAL PROVISIONS OF THE AGREEMENT:

1. The education of the student shall be the primary purpose of the training program.

2. The school shall be responsible for the education of the student.

3. The hospital agrees to share in the responsibility for the education of the student through the cooperation and assistance of its nursing staff with the faculty of the school and in the guidance and supervision of students.

4. The faculty of the school shall be responsible for selecting learning experiences for the students with the assistance and cooperation of hospital nursing personnel.

5. The school agrees to comply with the established policies and practices of the hospital.

6. The hospital agrees to accept_____class(es) of practical nursing students for clinical experience annually with the understanding that the maximum number of students will not exceed_____at any time including the normal overlapping period.

7. The hospital agrees to allow students and faculty, at their own expense, to use the cafeteria facilities provided for personnel.

IV. THE SCHOOL'S RESPONSIBILITY:

1. To maintain standards recommended in the Rules and Regulations of the Florida State Board of Nursing and in the State Plan for Practical Nurse Education of the State Department of Education.

   These include provision for physical examination, chest X-ray and certain immunizations prior to hospital experience.

2. To employ qualified registered professional nurse faculty who shall be responsible for determining the philosophy and the objectives of the school and developing the curriculum.

   The faculty shall be responsible for:

   a. Selecting patient assignments in cooperation with nursing personnel and supervising students in their learning experiences.

   b. Planning for concurrent related instruction (informal and formal classroom) as needed to meet the objectives of the program. This instruction will be scheduled during the regular school day.

   c. Maintaining individual records of class and ward instruction, nursing practice, evaluation of student competency, and health.

   d. Preparing a clinical rotation plan for services to be used for experience and securing the approval of the plan from the Director of Nursing prior to the beginning of the affiliation. Before any major changes are made in the plan they will be discussed and approved by the Director of Nursing.

   e. Interpreting to hospital and nursing personnel the roles of the practical nurse within the occupations of nursing.

V. THE HOSPITAL'S RESPONSIBILITY:

1. To make available to faculty and students hospital facilities and clinical services for planned learning experiences in patient care included in the practical nursing curriculum.

   The following services will be used for experience:

Services

Medical
Surgical
* Obstretical:
Labor Room and
Observation in
the Delivery
Room
Post Partum
Newborn
Pediatrics
Other:

*EXCEPTION FOR MALE STUDENTS:

Male students will substitute experience in Obstetrics and Gynecology by the following: genito-urinary conditions, surgery, orthopedics, emergency room, cast room, and psychiatric nursing.

2. To provide classroom and office space with adequate lighting and ventilation for the faculty and student use. Telephone to be conveniently located for faculty use.

3. To share and assist in the responsibility for the guidance and supervision of the students, particularly is such restricted areas as nursery.

4. To include members of the faculty of the school in hospital staff meetings when policies to be discussed will affect or are related to the practical nursing program.

5. To provide faculty and students with emergency medical care in case of illness or accidents incurred while on duty.

6. To provide each student with a chest X-ray at the completion of the course at no cost to the student.

VI. SCHOOL POLICIES:

1. The educational program shall consist of no less than thirty hours per week of classroom instruction, laboratory practice and experience in selected learning situations in hospitals and other health agencies. The division and arrangement of time to include the theoretical and clinical learning experiences shall be determined by the faculty, and be based upon the needs of the students for specific learning experiences to meet the objectives of the program.

If the faculty decides that it is desirable for students to have experiences in the hours other than those of the regular school day, this will be planned as a part of the curriculum during the last three months. This experience will be limited to two weeks and will not extend beyond the evening hour of 9:00 p.m. If students are assigned for this experience in this manner, a faculty member will accompany them to provide supervision and instruction.

2. The vocational school day is six hours, Monday through Friday.

3. Students will be regularly assigned for hospital experience Monday through Friday.

4. Students will be given holidays as provided for in the regular school calendar.

VII. REQUEST FOR WITHDRAWAL OF STUDENT:

The participating hospital has the right to request the school to withdraw any student from its facilities whose conduct or work with patients or personnel is not, in the opinion of the administrator of said hospital, in accordance with acceptable standards of performance.

The school may at anytime withdraw a student whose progress, conduct or work does not meet the standards of the school for continuation in the program.

VIII. DISCONTINUANCE OF AGREEMENT:

If either party to this agreement wishes to withdraw, it is understood that at least ninety days shall be given by either participating agency, provided that students currently enrolled in the program shall be permitted to complete the course.

IX. MODIFICATION OF THE AGREEMENT:

Modification of the agreement shall be made by mutual consent of both parties. A memorandum noting the modification shall be attached to this agreement and shall include the date, and signature of parties agreeing to it.

X. RENEWAL OF AGREEMENT:

This agreement shall be in effect for one year from the date of signing. It shall thereafter be reviewed and/or revised annually and for another year.

XI. COPIES OF THIS AGREEMENT:

Copies of this agreement shall be placed on file and be available to the following:

* 1. The Florida State Board of Nursing

2. The State Department of Education

3. The Administrator of the Affiliating Hospital

4. The Director of Vocational Education and/or Principal of the School

5. The Faculty of the School

* A copy of a revised contractual agreement shall be submitted to the office of the Board.

A letter of notification of review of the contract and its continuance for another year shall be sent to the office of the Board, if no changes are made in the contract.

A Plan for Disseminating Vocational Education Research Materials.

Georgia Occupational Research Unit, Atlanta
MF AVAILABLE IN VT-ERIC SET.
Pub Date - Jul67 24p.

*RESEARCH COORDINATING UNITS; *PROGRAM PLANNING; *INFORMATION DISSEMINATION; *VOCATIONAL EDUCATION; *EDUCATIONAL RESEARCH; INFORMATION PROCESSING
GEORGIA

The Georgia Research Coordinating Unit (RCU) receives current vocational education research materials from other RCU's in the nation, the Regional Education Laboratories, Regional Curriculum Projects, Bureau of Research of the U.S. Office of Education, government agencies, and Educational Resources Information Center (ERIC) that are of interest to those concerned with vocational education in the state. Dissemination of research is a stated function of the RCU and a plan was developed to accomplish this function. The plan includes (1) collecting vocational education research materials, (2) cataloging the incoming research materials, (3) evaluating the research to determine the audience to which the materials direct themsevles, and (4) disseminating the research materials to educators and lay people in the state who could benefit from the information. Specifically the plan calls for compilation of a "Three-Month Summary" of abstracts which will be mailed to vocational educators in October, January, and April and to a vocational guidance audience and to general educators in May. I. Statement of the Problem

It is the purpose of this paper to set forth an organized plan for disseminating research findings that are pertinent to Georgia's vocational education audience.

As a result of the Vocational Education Act of 1963, much vocational education research is being performed and it is essential that this information be communicated to vocational administrators and teachers at the local level.

Georgia's RCU, established in 1966, is in contact with other RCU's in the country and receives current vocational education research materials from these units.

The Georgia RCU is also in contact with Regional Education Laboratories, with Regional Curriculum Projects, with the Bureau of Research of the U.S. Office of Education, with government agencies, bureaus and departments such as the Labor Department, with regional and national occupational research centers such as those in North Carolina and at Ohio State University, and with national vocational education dissemination centers such as ERIC at Ohio State and ERIC Central.

These research materials--newsletters, bulletins, brochures, abstracts, proposals, interim and final research reports--are of interest to many in Georgia.

1. To those in the Vocational Education Division of the State Department of Education planning and evaluating vocational education programs.

2. To those outside the Vocational Education Division serving as
   a. state department employees
   b. vocational education teachers
   c. vocational education program supervisors
   d. other public school teachers
   e. public school visiting teachers
   f. high school and area school counselors
   g. public school curriculum directors
   h. public school principals
   i. area school directors
   j. public school superintendents
   k. undergraduate and graduate students of vocational education
   l. vocational education professors in Georgia's colleges
3. To those interested lay people in Georgia who could benefit from current findings of vocational education and occupational research.

As outlined in "The Proposal for a Georgia Research and Development Coordinating Unit," the functions of Georgia's RCU can be illustrated in the following terms: stimulation, identification, coordination, dissemination, participation, compilation, annotation, consultation, deliberation, and conduction of research.(1) In view of its stated objective of disseminating research information of importance to vocational educators in Georgia, there is a

need for Georgia's RCU to develop a research materials dissemination plan.

Particular considerations included in this problem of disseminating vocational education research materials are the techniques to be devised for collecting, evaluating, cataloging, and effectively disseminating this research information. To these four topics this paper thus addresses itself.

II. Background of the Problem.

Research materials related to vocational education are numerous. Those received by the Georgia RCU are filed at 98 Mitchell Street, Atlanta. Yet, no uniform method of receiving, reading, evaluating, cataloging, filing, or disseminating this incoming research materials exists now. Relatively few vocational educators in Georgia who could benefit from using this material are aware of its existence or location. A staff already committed to full-time pursuit of other aspects of the workload of the Georgia RCU must, therefore, set about determining priorities, assigning roles, and paving the way to put into operation a plan to disseminate vocational education research materials.

In determining the scope of such a plan, the importance of maintaining a complete file for cataloging and disseminatng must be emphasized. Another important consideration for emphasis is the method of evaluating incoming research materials, cataloging them for distribution, and informing those outside the RCU of their existence, importance, and availability for dissemination.

And, finally, of vital consideration is the need for developing a smoothly-flowing dissemination plan which will encounter a minimum of delay, experience a minimum of confusion, achieve maximum results from almost minimum amounts of time and attention which a limited RCU staff can devote to implementing such a plan.

In developing this plan, a method for dissemination must be designed contributing to the effective collection, evaluation, cataloging, and disseminating of research materials. Central to the development of such a plan, however, is recognition of the need to be flexible in planning. Upon trial runs of the Three-Month Summary system, upon evaluation of the effectiveness of the dissemination techniques proposed in the paper, upon analysis of the appropriateness of procedures outlined here to best meet objectives stated here, upon initial commitment to this plan and resultant evaluation of its effectiveness will the appropriateness of this plan be measured.

There are, of course, many methods for disseminating research materials. If this plan does not work effectively, modifications to it will be made. Later can come evaluation and analysis. Now, in the interest of program efficiency, must come a plan.

A plan for disseminating vocational education research findings is needed for the following reasons:

1. Vocational education at state and local levels become aware of new innovations and procedures for their field;
2. Vocational education at state and local level develop a spirit of creativity--a willingness to buy new things that cut across traditional ideas;
3. Vocational education at state and local levels become more concerned with what is best for the student not what is best for the service.

III. Functions and Objectives of the Dissemination Plan.

A. To organize an effective system of collecting vocational education research materials which are available and accessible to Georgia's RCU.

B. To develop a system of cataloging incoming vocational education research materials received from the many sources established to disseminate such information to Georgia's RCU.

C. To develop a means of effectively evaluating incoming vocational education research materials, deciding what audience the materials direct themselves to and determining what information should be included in the RCU Three-Month Summaries of Research Information of vocational education research materials available for dissemination.

D. To develop an effective method of disseminating vocational education research materials to those educators and lay people in Georgia who could benefit from such information.

IV. Procedures.

In view of the objectives stated previously as being appropriate to the scope of this dissemination plan, the following procedures are developed and included:

A. To organize an effective system of collecting vocational education research materials available and accessible to Georgia's RCU and its audience of those interested in vocational education research information.

1. Georgia RCU will subscribe to bulletins and research dissemination journals which relate to research in vocational education.

   a. Urban Review
   b. AVA Journal
   c. Research in Education
   d. Review of Educational Research (process of ordering)
   e. American Junior College Journal (ordering)
   f. Technical Education News

2. Georgia RCU will keep in touch with other RCU's in country, with Research Centers for Vocational Education, with agencies which concern themselves with information of relevance to occupational education research.

3. RCU will be in touch with Bureau of Research, U.S. Office of Education concerning federal legislation, research priorities and guidelines affecting vocational education research as carried on in Georgia.

4. RCU will be in touch with agencies in Georgia familiar with state legislation affecting vocational education.

5. RCU will be in touch with graduate schools in Georgia to keep informed of graduate level research carried on in Georgia graduate schools related to vocational education.

5. RCU will provide State Department of Education with Microfiche machines, providing these in an area of

central access to vocational and other educators concerned with research information relating to vocational education.

a. The abstracting service ERIC, Education Research Information Center, operates 12 Clearinghouses to procure and to abstract educational research information. This information is of interest to many in the State Department of Education.

b. The Georgia RCU could provide an educationally significant service to all the people of the state by developing plans for incorporating the ERIC resume service and the Microfiche Reader Service into the operational structure of the Georgia State Department of Education. Steps to be taken would be as follows:

(1) Georgia's RCU would either purchase from its funds or encourage the State Department of Education to purchase from its funds a Microfiche Reader and Reader-Printer to enable those ordering ERIC abstracts to read them in the 4" x 6" microfiche film form and to enable those reading this film form to make a hard copy (photo reproduction) of the abstract.

(2) This Microfiche Reader and Reader-Printer would be placed in the State Department of Education's Teacher Library. Staff librarians would be responsible for cataloging and ordering ERIC abstracts from the 12 Clearinghouses.

(3) All Department Directors at the State level involved in the ERIC document abstract subject-matter areas would be invited to a staff meeting or would be informed in writing of the purpose of ERIC and of the availability of using the Microfiche reader in a central State Department location.

(4) State Department Directors to be included in this ERIC program include directors of those subject matter areas which correspond to the 12 Clearinghouses:

(a) Junior Colleges

(b) Exceptional Children
(c) Linguistics
(d) Reading
(e) Counseling and Guidance
(f) Science Education
(g) Small School and Rural Compensatory Education
(h) Disadvantaged Youth
(i) Foreign Lanugages
(j) School Personnel
(k) Vocational and Technical Education
(l) Educational Administering

B. To develop a system of cataloging incoming vocational education research materials received from the many sources established to disseminate such information to Georgia's RCU.

1. All incoming research materials will be filed in one central location in Georgia's RCU.

2. These materials will not be checked out to people outside the RCU staff filing center. The reasons for not checking the materials out after their initial receipt by the Georgia RCU staff are many:

   a. There could be great difficulty in retrieving materials sent to others outside the RCU for evaluation if these materials are not returned to the RCU staff immediately after routing.

   b. It is time consuming and involves much paper work to send incoming RCU research materials to others outside the RCU staff for evaluation.

   c. Efficiency requires that more people than those in Vocational Education Division have easy access to ordering RCU materials. If materials are not checked into RCU filing center, they might not be available for duplicating, etc.

3. All research materials received by Georgia's RCU will be initially evaluated two times in the cataloging process.

   a. The RCU Senior Stenographer, who as Dissemination

Services Coordinator, will initially process all incoming research materials, assigning a catalog number, preparing subject cards, and then routing incoming research information to the Georgia's RCU Technical Writer.

b. The RCU Technical Writer will evaluate incoming research information after it has been processed and prepare it for dissemination. The writer will also write an abstract that contains the essential findings.

4. All materials will be filed in one RCU depository to insure that they are available for cataloging, for abstracting, for inclusion in the Three-Month Summaries and for possible duplicating services.

5. The RCU senior stenographer assigned to the technical writer will be responsible for cataloging of incoming vocational education research materials. Her responsibilities include:

a. Cataloging--all incoming research materials will be catalogued in chronological order according to their date of receipt by Georgia's RCU staff.

b. Filing--these materials will be filed in chronological order in one central location in Georgia's RCU office, with numbers applied to their spines corresponding to their catalog number representing date of receipt by Georgia's RCU staff and with subject matter cards made for the one main subject related to the book. These cards will be filed in alphabetical order according to subject.

c. Recording--all incoming research materials, after having been assigned a catalog number, will have their catalog numbers, their titles, their subjects, and their authors recorded in a Georgia RCU "Journal of Research Materials." This recording step will give an accurate record of date of receipts and titles of research materials included in the Georgia RCU collection.

C. To develop a means of effectively evaluating incoming vocational education research materials, deciding what

audience the materials direct themselves to, deciding which materials should be included in the Three-Month Summaries of vocational education research materials available for dissemination.

1. RCU Technical Writer will abstract highlights from all research materials received by Georgia's RCU and determine appropriateness of these as entries into Three-Month Summary. The Technical Writer will prepare abstract entries for the Three-Month Summary.

2. Quite obviously, all research information relating to vocational education and received by the Georgia's RCU cannot be included in the abstracting process. Thus, criteria for abstracting must be identified. They are as follows:

   a. Form. Abstract form for research reports will follow the style suggested in American Psychological Association in Style Manual, page 8a.

      3. An abstract of a research paper should contain statements of (a) the problem, (b) the method, (c) the results, and (d) conclusions. Results are most important, and every abstract should contain at least the trend of results. It is also highly desirable to state the number and kind of Ss, the kind of research design and the significance levels of results.

   b. Source. The source of incoming research information will be a consideration in evaluating possible entries for Three-Month Summary listing. Such concerns as reliability of information and objectivity in preparing report will be interests of those evaluating research information for inclusion in the Three-Month Summary. The source of each research report will be listed by address, the cost of each article will be listed, if the report is available for ordering from its publisher.

c. Significance. The significance of research findings sent to Georgia's RCU and their relation to vocational education programs, plans, and problems in Georgia will be another consideration in evaluating incoming vocational education research information for inclusion in Three-Month Summary.

d. Audience. The relationship of incoming research information to the many audiences identified for dissemination of vocational education research information received by Georgia's RCU will be a definite criterion for consideration of including vocational education research findings in Three-Month Summary.

e. Other Criteria. Criteria used for including research information in Three-Month Summary include: recent publication date; relevance to programs in Georgia as related to industry in state, course offerings in schools, universal application of information.

D. To develop an effective method of disseminating vocational education research materials to those educators and lay people in Georgia who could benefit from such information.

1. Compilation of abstracts of research materials received by Georgia's RCU staff on a monthly basis will result in the development of an RCU Three-Month Summary report, an outgoing research materials report.

   a. This three-month summary will be mailed to vocational educators three times a year, in the months of October, January, and April, and prepared for mailing on the thirtieth of each month.

   b. In addition, annual mailings will be sent in May of each year to a vocational guidance audience and to general educators. These mailings will be compilations of research reports included in the Three-Month Summaries mailed previously to vocational educators.

c. This report is designed to identify by catalog number, by title, and by abstracting synopsis those research materials available for ordering from research sources throughout the United States, either from principal investigators or from institutions.

d. It is also designed to inform vocational educators and lay people in Georgia of the availability of this information and of the method to use in requesting such vocational education research information.

2. Developing a Three-Month Summary report will result in this dissemination plan's culmination. This dissemination will be to a large audience of vocational educators in the state informing them of this Quarterly Summary service.

3. The Dissemination Services Coordinator will prepare the "Three-Month Summary " for mailing.

V. Evaluation of the Dissemination Plan.

In order to effectively disseminate the research materials received by the Georgia RCU to the largest number of Georgians interested in receiving these materials, the following evaluation procedures are included:

A. Announcement of receipt of research materials, catalog number, title, and brief synopsis of material will be made in RCU's three-month mailing, the "Three-Month Summary."

B. Periodic evaluation sheets will be sent to those state level and local level vocational educators and lay members in Georgia who will help in determining the effectiveness of the Three-Month Summary.

VI. Time Schedule

In putting into operation this dissemination plan of vocational education research materials, Georgia's RCU staff will assign the following time periods and dates to help carry out procedures related to the objectives of this plan:

A. July 1, 1967-September 30, 1967

1. Prepare Dissemination Plan Proposal.
2. Prepare presentation for Vocational Education. Division Staff Meeting, September 11, 1967.
3. Develop mailing list for initial mailing.
4. Develop materials for initial mailing:
   a. Cover letter, including summary of RCU's purpose.
5. Evaluate, catalog, file, cross-reference, and journal enter available vocational education materials for dissemination.

B. October 1, 1967-October 30, 1967

1. Initial mailing of Dissemination Plan Familiarizing Materials to vocational educators throughout the state and to vocational education administrative staff, both in and out of the State Department of Education--October 30, 1967.
2. Preparation of mailing list for October 30, 1967, initial Three-Month Summary mailing--October 1-30, 1967.
3. Preparation of first Three-Month Summary report and stencil--October 1-October 30, 1967.

4. Continued evaluating, cataloging, filing, journal entering and cross-referencing of vocational education research materials for dissemination.

C. October 30, 1967

1. Mail initial Three-Month Summary.
2. Continue with work related to dissemination plan.

D. November 1, 1967-Completion of RCU Contract

1. Three-Monthly mailing of Three-Month Summary, approximately the 30th of the months of October, January, and April.
2. Filing, cataloging, journal entering, cross-referencing, disseminating.
3. Evaluation of Dissemination Plan by survey to see if it is meeting its stated objectives of carrying out the dissemination process as efficiently and as effectively as possible. If it is not, revision of those parts of this plan causing inefficiency will be made.
4. Order Microfiche Reader and Microfiche Reader-Printer. Place in State Department of Education library. Work with library staff to develop abstract ordering and cataloging procedures if library staff requests services of RCU staff in setting up the system. Plan State Department meetings to involve Directors in ERIC Clearinghouse abstracting procedures.

VII. Materials.

In order to most effectively and most efficiently carry out this Dissemination Plan the following materials will be needed by May 1, 1967:

A. Supplies to Collect Vocational Education Research Information.

1. Microfiche Reader

2. Microfiche Reader-Printer

B. Supplies to Catalog Vocational Education Research Information.

*1. One (1) Metal Table, 34" x 70" for assembling Quarterly Summary.

*2. One (1) 5-drawer filing cabinet.

*3. One (1) electric typewriter, suitable for cutting stencils.

C. Supplies to Develop Quarterly Summary.

*1. Office supplies

a. Paper

b. Envelopes

c. Stencils

d. Mimeograph

e. Xerox

*All items are in addition to equipment and supplies available or on hand at the time this proposal is prepared. All items so asterisked appear in the Proposed Budget for "Establishment of State Coordinating Unit for Occupational Research and Development."

A MESSAGE TO THOSE INTERESTED IN VOCATIONAL EDUCATION RESEARCH

The Georgia Research Coordinating Unit, located in the Vocational Education Division of the State Department of Education, has a service available to all Georgia educators interested in vocational education research.

1. The Georgia Research Coordinating Unit (RCU) is one of 44 RCU's in the country.

2. One of the services of the Georgia RCU is to send vocational education research information of interest to Georgians.

Three times each school year, the Georgia RCU will mail out a summary of vocational education research projects and materials which are available for ordering from research sources around the county. A catalog number, a title of the research publication, and a paragraph summary of the content of the research report will be included in these three-month summary.

You will find the Georgia RCU's first Three-Month Research Summary. enclosed. We look forward to hearing from you and we look forward to sharing with you research information concerning your area of interest as related to vocational education.

*CONFERENCE ON UNIONS AND THE CHANGING STATUS OF WOMEN WORKERS, NEW BRUNSWICK, NEW JERSEY, OCTOBER 17, 1964

Fifty-six participants met to consider attitudes of employers, labor unions, government agencies, and professional organizations toward working women, and the barriers that limit women's opportunities in hiring, promotion, and training. Because the focus of the conference was on the responsibility of both individual union members and unions themselves to recognize these barriers and find ways to eliminate them, the conferences also discussed the content of labor-management contracts, community participation of unions and of individual members, and involvement of wives of union members. Presentations were: a report of the President's Commission on the Status of Women by Mrs. Gloria Johnson and a speech, "Employment Practices and Women Workers, The New Jersey Experience," by Mr. Raymond F. Male. At workshops the participants discussed: (1) Problems of Women on the Job, (2) How to Activate Women in the Local's Program, and (3) Women's Invitation to Community Action. Discussion questions, a summary of the workshop reports, samples of questionnaires which were administered to union members and their wives, an analysis of the questionnaires, and a list of conference attendees are included. FOREWORD

This is a report of the 1-day conference on Unions and the Changing Status of Women Workers, held at the Labor Education Center, Rutgers-The State University, New Brunswick, New Jersey, on Saturday, October 17, 1964.

The conference was sponsored by the Labor Program, Institute of Management and Labor Relations, Rutgers; representatives of New Jersey labor unions; and the Women's Bureau, U.S. Department of Labor.

The fact that nearly 26 million women were reported in the labor force in 1964, the great majority of them working for compelling economic reasons, brought new problems into view and emphasized others that had been looked upon formerly as affecting only a relatively small number. These problems explored by the conference participants included attitudes of employers, labor unions, government agencies, and professional organizations toward working women; and barriers that limit women's opportunities in hiring, promotion, and training. Because the focus of the conference was on the responsibility of both individual union members and unions themselves to recognize these barriers and find ways to eliminate them, the conferees also discussed the content of labor-management contracts, community participation of unions and of individual members, and involvement of wives of union members.

Grateful appreciation is extended to all who planned and organized the conference, the speakers, workshop leaders, resource specialists, and others who made the conference possible and successful.

We hope similar regional conferences will be held, to continue to stimulate interest in the welfare of working women and action toward solving their problems.

PROGRAM

UNIONS AND THE CHANGING STATUS OF WOMEN WORKERS

9:00 - 9:30 a.m.	REGISTRATION Coffee Hour
9:30 - 10:00 a.m.	WELCOME Robert A. Steffen, Assistant Extension Specialist, Labor Program, Institute of Management and Labor Relations, Rutgers Dorothy M. Pendergast, Regional Director, Women's Bureau, U.S. Department of Labor, Boston
10:00 - 11:00 a.m.	Report: The President's Commission on the Status of Women Chairman: Nicholas Juliano, Business Manager, Local 32, Office Employes International Union, AFL-CIO Speaker: Gloria Johnson, Assistant, Research Department, International Union of Electrical, Radio and Machine Workers, AFL-CIO
11:00 - 12:30 p.m.	DISCUSSION GROUPS Coordinator: Robert A. Steffen 1. Problems of Women on the Job Leader: Winfield S. Chasmar, President, Local 284, Laundry Workers, Cleaners & Dyers Union, AFL-CIO Resources: Dorothy M. Pendergast Dr. Georgina Smith, Assistant Research Specialist, Research Program, Institute of Management and Labor Relations, Rutgers Reporter: Phyllis Pank, Local 1038, United Auto Workers, AFL-CIO

2. How To Activate Women in the Local's Program

Leader: Robert A. Steffen

Resource: Betty Tianti, Local 460, Textile Workers Union of America, AFL-CIO

Reporter: Margaret Ault, New Jersey State Federation of Teachers, American Federation of Teachers, AFL-CIO

3. Women's Invitation to Community Action

Leader: Nicholas Juliano

Resource: Esther Murray, Director, Women's Activities, Eastern Area, Committee on Political Education, AFL-CIO

Reporter: Connie Woodruff, Education and Political Director, New Jersey Eastern Regional Locals, International Ladies' Garment Workers' Union, AFL-CIO

12:30 - 1:30 p.m. LUNCHEON

1:30 - 2:30 p.m. Chairman: Dr. Herbert A. Levine, Chairman, Labor Program, Institute of Management and Labor Relations, Rutgers

Employment Practices and Women Workers: The New Jersey Experience

Speaker: Raymond F. Male, New Jersey Commissioner of Labor and Industry

2:30 - 3:30 p.m. CONTINUATION OF DISCUSSION GROUPS

3:30 - 3:45 p.m. BREAK

3:45 - 4:30 p.m. DISCUSSION REPORTS

Speaker: Agnes M. Douty, Chief, Field Division, Women's Bureau, U.S. Department of Labor, Washington, D.C.

4:30 p.m. ADJOURNMENT

CONFERENCE OBJECTIVES

To explore the attitudes of employers, labor unions, and professional and government organizations toward working women.

To consider methods of involving women workers in union activities and community life.

To review the report of the late President John F. Kennedy's Commission on the Status of Women and to devise means of implementing the Commission's recommendations.

CONFERENCE SPONSORS

Labor Program, Institute of Management and Labor Relations, Rutgers-The State University

Representatives of New Jersey labor unions

Women's Bureau, U.S. Department of Labor

PARTICIPATING UNIONS

Amalgamated Clothing Workers of America, AFL-CIO

Communications Workers of America, AFL-CIO, District 1

International Brotherhood of Electrical Workers, AFL-CIO, Telephone Workers of New Jersey, Local 827

International Union of Electrical, Radio and Machine Workers, AFL-CIO, District 3

International Ladies' Garment Workers' Union, AFL-CIO, New Jersey Eastern Regional Locals

American Federation of Teachers, AFL-CIO, New Jersey State Federation of Teachers

Office Employes International Union, AFL-CIO, Local 32

Retail Clerks International Association, AFL-CIO, Local 21

Textile Workers Union of America, AFL-CIO

International Union, United Automobile, Aerospace and Agricultural Implement Workers of America, AFL-CIO, Region 9

WELCOMING REMARKS

Mr. Robert A. Steffen, Assistant Extension Specialist, Labor Program, Institute of Management and Labor Relations, Rutgers, extended a warm welcome to all attending the conference.

Miss Dorothy M. Pendergast, Regional Director, Women's Bureau, U.S. Department of Labor, Boston, added her welcoming remarks.

THE PRESIDENT'S COMMISSION ON THE STATUS OF WOMEN

Mrs. Gloria Johnson
Assistant, Research Department,
International Union of Electrical, Radio and Machine
Workers (IUE), AFL-CIO

Mr. Chairman, friends, delegates, I am most happy to be with you today and to take part in this conference on Unions and the Changing Status of Women Workers.

I am sorry, of course, that Caroline Davis of the United Auto Workers is not able to be here today. As stated in our program, Miss Davis was to have reported to us today on the President's Commission on the Status of Women. Miss Davis served on one of the seven critically important committees of the Commission.

However, to her deep regret, because of a family emergency, she is not able to participate in this conference as she had planned.

I want to thank Mr. Steffen for honoring me and the international union I represent by inviting me to substitute for her. I would be the first to concede that no one can adequately substitute for Caroline. She is, without a doubt, one of the truly outstanding women in the trade union movement today--and has been for more years than she would care to have me mention.

My knowledge of the Commission and its accomplishments does not derive quite as much from firsthand knowledge as does Miss Davis' knowledge. However, I was so fortunate as to be appointed by the president of our union--the International Union of Electrical, Radio and Machine Workers, AFL-CIO--to work closely with and assist the only woman trade union representative on the Commission. Mrs. Mary Callahan, a member of the International Executive Board of the IUE, was named by President John F. Kennedy to serve on the Commission's Committee on Protective Labor Legislation. My work with this committee was close and continual and, I should add, deeply enjoyable.

In addition, I was asked by IUE President Carey to work with him on the Commission's Committee on Civil and Political Rights.

I had the advantage, therefore, of working closely with and becoming familiar with the work and accomplishments of two of the Commission's most important bodies.

No time is more fitting than now--1 year after the historymaking event--to look again at the President's Commission on the Status of Women and to review the reason for its creation, what it accomplished, and what has happened since the Commission filed its report in October 1963.

It was on October 11, 1963, that the late President John F. Kennedy was presented a copy of the final report of the Commission. It was a highly appropriate date, since October 11 was the birthday of Mrs. Eleanor Roosevelt, who was appointed chairman of the Commission when it was established by Executive order in 1961.

Even though Mrs. Roosevelt was no longer with us when the final report was submitted, certainly her interest and enthusiasm for the Commission are reflected in the Commission's devoted labors and comprehensive recommendations.

At the time of her appointment as chairman, Mrs. Roosevelt said:

> It is very necessary to take stock of where women are and of what changes there are in the world community that will change the position of women; growing out of this will be certain recommendations of great value.

This week we celebrated--with more than a little reverence and gratitude--the 80th anniversary of Eleanor Roosevelt's birth, and we feel that her predictions concerning the work of the Commission have come true.

There is no doubt that a Commission on the Status of Women was inevitable in light of the increasingly important part played by women in all aspects of social, political, and economic life and their changing status in many aspects of our swiftly changing world.

A woman, perhaps, is the most dynamic creature alive. No reflection on men--this just happens to be the reality of the 1960's.

Women are homemakers, often heads of families. Many are full-time employees working to help meet the high costs of living as well as to provide family benefits not available without their help. Many women work part time, and are enrolled in schools. Many support their parents in full or contribute to their support. They are mothers, wives, workers, students, civic leaders, PTA presidents, Girl Scout leaders, political activists--the list of vocations and avocations is endless. And in each capacity, the modern woman's status is in constant change.

Let us look at some of this century's radical changes in the status of women:

In 1900, 5 million women made up 18 percent of the total work force. Today there are 24 million women workers; 1 out of every 3 workers is a woman. Six years from now, 30 million is the forecast. In 1940, 18 percent of women workers toiled as household help. The percentage of household workers skidded to 8 percent by 1950.

In 1940 married women comprised less than one-third of the female work force; by 1950 their number had reached half, and today they constitute 60 percent of the Nation's female work force.

Between 1950 and 1960, professional employment of women rose 41 percent; clerical work, 46 percent; and service jobs, 48 percent.

In 1960 we could count 3.4 million women trade unionists--18 percent of all union members and 30,000 above the 1958 mark (not as many as should be).

The number of women earning bachelor's degrees in 1940 was about 77,000; in 1961 the total had soared to 146,000 (again not as many as should be).

These are only a few of the changes in the status of women, only a very few.

It was fitting then that a Commission be established to review all these changes, the results of these changes, and their probable future direction, and to recommend additional changes that would benefit not only the woman but the world in which she operates.

On December 14, 1961, President Kennedy issued Executive Order 10980 establishing the President's Commission on the Status of Women.

Speaking at the first meeting of this Commission, President Kennedy gave two reasons for making this Commission a reality. One reason, he said, with that broad unforgettable smile, was "for my own self-protection." It seemed that every week, or more often, newspaperwomen at his press conferences wanted to know what he was going to do for women.

The other reason for creating the Commission, the late President explained, was that one-third of the country's labor force now is made up of women whose primary obligation is to their families and their homes, but whose work makes it possible to maintain that home and that family.

The Commission he created was composed of 26 members drawn from all walks of American life. It was supplemented by seven committees to handle specific problems.

According to the initial outline of the proposal for the President's Commission on the Status of Women, the goals this Commission was to fulfill were:

1. To give appropriate recognition to women's civic and political accomplishments and to their basic rights.

2. To strengthen homelife by directing attention to critical problems confronting women as wives, mothers, homemakers, and workers, so that the community may provide additional services and protection for mothers who do not wish outside employment as well as for those who seek it because of need or individual choice.

3. To recommend methods of overcoming remaining discriminations against women in employment and in civil, political, and property rights.

4. To promote more effective methods for enabling women to develop their skills and for the Nation to utilize them for its pressing domestic and international requirements.

Four consultations were held on private employment opportunities, new patterns in volunteer work, portrayal of women by the mass media, and problems of Negro women.

On October 11, 1963, Mrs. Esther Peterson, Assistant Secretary of Labor, presented to President Kennedy the Commission's final report.

Entitled American Women, this report is undoubtedly the most incisive and comprehensive study of its kind ever made. My own feeling--and I believe that of the labor movement--is that this report is a pioneering and historymaking appraisal of the status of women that will have permanent and lasting effects.

American Women summarizes impressively the findings of each committee in its particular field.

Because of the significance of each area studied, we shall briefly consider each separately, with attention directed mainly to those recommendations adopted by the Commission.

Education

There is no doubt that more women receive a better education in America today than at any other time or place in history. In fact, until recently more American young women than young men have stayed in school up to the college level. In 1962 the median number of years of school completed by women was 12 compared with 11.6 for men.

But once the college level is reached, girls begin to fall behind. Women are earning only 1 out of 3 of the bachelor's and master's degrees awarded by American institutions of higher learning, and only 1 out of 10 of the doctorates. These ratios are actually less than in the 1930's, when 2 out of 5 bachelor's and master's and 1 out of 7 doctor's degrees were earned by women.

Today for about 50 percent of all American women, formal education ends when they finish high school. Obviously, the problem here is to encourage and provide means of attaining more education.

But of equal importance is the education both high school graduates and nonhigh school graduates have received--its quality and relevance to the needs of women, keeping it alive during years of homemaking and reviving it afterwards.

The Committee on Education had to consider these problems.

Foremost, of course, is the realization that expanded educational opportunities of higher quality are needed for all groups, from kindergarten through graduate school. To this end the committee wholeheartedly endorsed making kindergarten and nursery school facilities available to all. Further, the committee took a stand in support of Federal legislation to improve American schools by providing financial support for expanding facilities and increasing teachers' salaries.

Opportunities for mature women to continue their education beyond high school should be greatly expanded and adapted to their needs. This means, of course, the encouragement of part-time study through grants of financial aid, flexibility in working out schedules, establishment of methods of rebuilding habits of study, and the development of educational guidance services to help the mature woman deal with problems of resumed study and a possible second career.

And, of course, to help direct and prescribe counseling, both private and public resources have to be strengthened.

When we consider the fact that 8 out of 10 girls will work in paid employment at some time in their lives, we see the importance of and the need for attention to the quality and quantity of education they must receive. Age must be no factor in determining when education stops--but rather should merely serve as a guide to the level and type of education that is needed.

Home and Community

Of the 68 million women and girls 14 years old and over in the United States today, 44 million are married and keeping house. The Commission recognized the significance of these statistics. There is no doubt these mothers and homemakers have certain fundamental responsibilities.

Certainly all of these responsibilities can be better met if the mother has available new and expanded community services. It was with this in mind that the Committee on Home and Community formulated its recommendations:

1. Child care services should be available for children of all families at all economic levels.

Today the statistics on the number of licensed day care centers are appalling. Only 185,000 children receive this licensed care; yet almost 3 million mothers of children under 6 years of age work outside the home.

It was recommended that costs should be met by fees scaled to parents' ability to pay, contributions from voluntary agencies, and public appropriations.

2. Tax deductions for child care expenses of working mothers should be kept commensurate with the median incomes of couples where both husband and wife work. Public Law 88-272, enacted February 26, 1964, brought about certain improvements: joint income level raised to $6,000; $900 deduction allowed for two or more dependents. This represents a step in the right direction, but more must be done.

3. Availability of family services under public and private auspices to help families avoid or overcome breakdown or dependency and establish a soundly based homelife should be increased.

There are many women who do not know about the availability of prenatal, infant, and preschool services.

To complicate the problem, there are over a million women who live outside institutions although they have chronic conditions making them unable to work or keep house. Large numbers of physically and mentally disabled women in this country need rehabilitation services to fit them for work or self-care.

4. Volunteer services should be made more effective through coordinated and imaginative planning, and their availability should be expanded. This is needed especially in locating hospitals, schools, child care centers, playgrounds, and the like.

Private Employment

Today there are 24 million women workers; 30 million women workers are predicted by 1970. Nearly one-third work part time, and three-fifths of all part-time work is done by married women. These are not just statistics. These are human beings. And the Committee on Private Employment was given the task of finding out what barriers exist that bar women from equal opportunities in employment, training, and job advancement and to pursue the areas of pay differentials based on sex.

Accordingly, the following recommendation was made: Equal opportunity for women in hiring, training, and promotion should be the governing principle in private employment.

The Commission felt that action should be taken to encourage employers who do not have Government contracts to comply with the Federal policy of nondiscrimination. There exists now Executive Order 10925, which forbids discrimination based on race, creed, color, or national origin--but not sex--in employment under Federal contracts.

While there were those on the committee who felt differently (we shall go into that in a moment), the Commission's position was that sex should not be made a part of this Executive order, since discrimination "based on sex involves problems sufficiently different from discrimination based on the other factors to make separate treatment preferable."

In contrast to the position of the Commission, a minority report was filed by Caroline Davis of the United Auto Workers, AFL-CIO. I shall not attempt to repeat the entire dissent here. Of major importance is the fact that as far back as 1941 the UAW has supported, by convention action, resolutions calling for the inclusion of sex and age in the nondiscriminatory clause of Executive orders dealing with fair employment. This was true in 1962 when again such action was recommended.

Another argument advanced was that our country has had many years of experience with programs based on voluntary compliance. Yet, too often, voluntary compliance is a slow, often not occurring, procedure.

It is Mrs. Davis' opinion that the Executive order proposed by the Committee on Private Employment is no more than a statement supporting equality of opportunity.

Therefore, Mrs. Davis recommended to the President's Commission on the Status of Women that it include in its report to the President, the recommendation that the word "sex" be inserted in the nondiscrimination clause of Executive Order 10925.

(Of course, since the Commission made its report, Public Law 88-352, the Civil Rights Act of 1964, has become law of the land. Title VII, Equal Employment Opportunity, prohibits discrimination because of race, color, religion, national origin, and sex.)

The committee also recommended that the United States Employment Service, Department of Labor, issue a policy statement to promote equal employment opportunities for applicants of both sexes based on skills and abilities. At the request of the Commission this was done. The directive went even further, requesting employers using these employment offices to avoid job orders specifying sex except where genuinely warranted.

Federal Employment

An issue of grave concern to members of the Committee on Federal Employment and to the Commission itself was the part-time worker. There is no doubt that there are women who just can't work 8 hours a day, but who are eager to earn part-time income. In some Government agencies, this type of work has been made available. Unfortunately, Federal systems of manpower utilization discourage part-time work.

Therefore, the Commission recommended that the Civil Service Commission and the Bureau of the Budget facilitate the imaginative and prudent use of part-time personnel throughout the Government service.

The very first recommendation made by the Committee on Federal Employment Policies and Practices to the full Commission was aimed at removing the last legal barrier to equal opportunity for women in Federal Government. This barrier dated back to 1870--even prior to the Civil Service Act. It is ironic that this legal barrier grew out of legislation designed initially to benefit women in the matter of pay, but which was

construed for nearly half a century to give appointing officers the unrestricted right to consider only men (or only women) for appointment. This interpretation continued until 1962, when the Attorney General reviewed the opinion of his predecessor, and his investigation led to only one answer--an opinion that this legislation did not restrict the authority of the President to regulate the civil service.

As a result of this opinion, a Presidential directive was issued to Federal agencies ordering that Government positions must be filled on the basis of merit and without regard to sex, except in unusual circumstances found justified by the Civil Service Commission.

Preliminary studies show that, because a reason must be given now when the sex is specified, there has been a remarkable reduction in the percentage of requests for men only or women only.

Further, the percentage of women appointed from the Federal Service Entrance Examination register rose from 14.9 percent for the 12-month period ending October 1961 to 17.3 percent for calendar year 1962.

There is no doubt that the status of women will improve even more. Certainly individual agencies must insure that promotion is based solely on merit.

Labor Standards

Perhaps no greater contribution has been made to the woman worker than the protective labor legislation enacted over the past 50 years: the workweek has been shortened (not as short as it needs to be); minimum wages have been set (not as high as they should be); and sweatshop conditions have been practically eliminated.

It was only fitting that the Commission on the Status of Women assign one of the committees to study the current status of labor legislation. Issues considered here are certainly of major significance to those of us in the trade union movement, where at the present time many of us are supporting the shorter workweek, higher minimum wages, and higher pay for overtime work. We of the labor movement recognize these as important ways of reducing the persistent high level of unemployment that engulfs our Nation.

The Committee on Protective Labor Legislation recommended the extension of the Federal Fair Labor Standards Act (FLSA) to currently uncovered workers such as workers in hotels, motels, and laundries. Further, it encouraged State legislatures without minimum wage laws to enact them, and those with laws to strengthen them.

I was particularly happy that the recommendation for a Federal equal pay bill is now a reality. I have been a member of the National Committee for Equal Pay for 7 years. I have seen the work this committee, representing labor and civic groups, has done to get this legislation passed. While the act does not completely measure up to our goal, it represents a foot in the door.

I am proud to say that since its inception the IUE has been a leader in the fight for this legislation. A large segment of our membership is women. Our position in regard to equal pay and the advancement of women was well summarized in our 1951 convention proceedings:

> A fundamental principle of our International Union is the equality of all workers regardless of race, color, creed, sex, or national origin.

As unionists we know that either discrimination against women or failure to provide them with equal opportunity produces a weakness in our movement. Women workers should be provided not only with the opportunity for equal pay for equal work, but also assured the safeguarding of their health and the provision for community facilities to aid them in carrying out their family responsibilities.

In 1962, two IUE workers of the General Electric Company and the Westinghouse Corporation, along with President Carey, testified on behalf of the equal pay bill. Needless to say, we were extremely happy when, on June 10, 1963, President Kennedy signed the Equal Pay Act which amended the Federal Fair Labor Standards Act. Our job, of course, is not over. Much improvement is needed, and I am sure that in the future as in the past IUE shall continue to give its time and effort to this cause.

Another recommendation of this Commission of special interest to us in the trade union movement stated: "State laws should protect the right of all workers to join unions of their own choosing and to bargain collectively." The position of labor in regard to right-to-work laws is well known.

We in the labor movement know the difficulty of organizing and maintaining unions when the right to do so is not protected. Where States have enacted legislation restricting the right of employees to organize, the rights of the workers are endangered.

Social Insurance and Taxes

This committee concentrated its study on the Federal old-age, survivors, and disability insurance program (OASDI) and the Federal-State unemployment insurance program. In addition, because of its importance to the welfare of both the mother and the newborn child, the committee felt it should point to the very limited protection provided for loss of income due to maternity.

Since its inception in 1935, both scope and coverage of the OASDI program have been broadened progressively. Benefits, which at first were paid only to workers on retirement, have been added for dependents of retired workers, for survivors, and for disabled persons. Coverage also has been greatly extended, so that the program now provides basic protection for almost the entire population against old age, disability, and death. The OASDI program is of importance to single and married women as workers, as well as to wives, widows, divorced wives, and aged parents. At present, most of the beneficiaries of the program are women. There still are certain deficiencies and inequities that should be rectified.

One obvious change needed is in regard to widows' benefits. A widow's benefit under the Federal old-age insurance system should be equal to the amount that her husband would have received at the same age had he lived. This objective should be approached as rapidly as may be financially feasible.

Many millions of workers are excluded from coverage under unemployment insurance. Employers of less than four workers are excluded in most States. There is little coverage of employees of nonprofit organizations, employees of State and local governments, agricultural workers, or household workers. With the exception of the agricultural group, large numbers--if not most--of the workers in these groups are women.

For these reasons the committee recommended that coverage of the unemployment insurance system be extended.

Further, paid maternity leave or comparable insurance benefits should be provided for women workers. Employers, unions, and governments should explore the best means

of accomplishing this purpose. Such a need is obvious when we consider that not more than a third of the working women of the country have either public or private insurance against loss of income due to childbearing. For low-income families especially, loss of income can threaten the welfare of both the mother and the newborn child.

Civil and Political Rights

Although the legal status of women has improved greatly in the past few decades, there still exist laws and official practices that discriminate on the basis of sex. The Commission considered various proposed methods of achieving greater recognition of the rights of women:

1. Test litigation seeking redress from discrimination under constitutional safeguards

2. Amendment to the Constitution (Equal Rights)

3. State legislative action to eliminate discriminatory State laws.

The Commission asserted that since the United States Constitution now embodies equality of rights for men and women, a constitutional amendment need not be sought now in order to establish this principle. (Our union is against it.) However, early and definitive court pronouncement, particularly by the Supreme Court, is needed urgently with regard to the validity under the 5th and 14th amendments.

Specific problem areas were considered: jury service and personal and property rights. In both cases, the Commission advocated the need for legislative action to remove the barriers to equal treatment of men and women.

Along with full equality and equal treatment for women is the need for women themselves to pursue a more active role politically. The need is obvious when we realize that in the Federal Congress there are only 2 female Senators and only 11 females out of 435 Representatives. Only two women have held Cabinet rank in the Federal Government. Of 7,700 seats in State legislatures in 1962, 234 were held by women.

The Commission recommended, therefore, that women be encouraged to seek elective and appointive posts at local, State, and National levels and in all three branches of government.

In addition to reports of committees, four consultations were held under the Commission's auspices on private employment opportunities, new patterns in volunteer work, portrayal of women by the mass media, and problems of Negro women. Many of the recommendations arising from these consultations have been discussed under committee reports. I shall, however, consider the consultation on problems of Negro women.

Miss Dorothy Height, President of the National Council of Negro Women, a Commission member, beautifully summarized the findings of this meeting when she said: "Negro women have the same problems and hopes as other women, but they cannot take even the same things for granted. If the Negro woman has a major underlying concern, it is the status of the Negro man and his position in the community and his need for feeling himself an important person, free and able to make his contribution in the whole society in order that he may strengthen his home."

It is obvious that there is a need for greater vocational training opportunities; schools providing such training must be open to all people, regardless of race. Not only should job opportunities be found for Negroes already trained, but also vocational training should be stimulated for jobs that currently are not open to them.

Seeing new jobs opened to parents will affect children's decisions about staying in school and selecting fields they themselves wish to enter.

The Commission recommended as a means toward accomplishing many of its goals an Executive order designating a Cabinet officer responsible for assuring that the prestige and the resources of the Federal Government are used to effect the Commission's recommendations. In addition, the order would create a citizens' committee as an advisory group.

On November 1, 1963, to the gratification of the American labor movement and scores of women's organizations, President Kennedy issued Executive Order 11126, which:

1. Established an Interdepartmental Committee on the Status of Women, headed by the Secretary of Labor, and

2. Created the Citizens' Advisory Council on the Status of Women, with 17 members, including IUE International Executive Board member Mary Callahan.

Just this week the Interdepartmental Committee and the Citizens' Advisory Council prepared their first annual report, tracing the development of opportunities and areas of advances for women during the past year.

The advances came, the report stated, from the increased awareness at many levels of women's frequently unused potential and of women's needs, accompanied by expectations of greater accomplishment.

Briefly, here are just a few of the highlights of this report:

1. Between January 1 and October 2, 1964, 68 new appointments of women to important Federal Government posts were announced by President Johnson.

2. Executive agencies had appointed 311 and promoted 1,231 other women at salary levels of $10,000 and above.

3. The Federal Employees Health Benefits Act was amended to provide that married women pay the same premium as married men.

4. The Equal Pay Act of 1963 became effective, and the Civil Rights Act of 1964 was enacted.

5. The wife of an unemployed man now may be paid a training allowance while she is taking training under the Manpower Development and Training Act.

6. Improvements were made in State legislation, and activities of the Governors' Commissions on the Status of Women were expanded in 33 States. These cannot succeed without the cooperation of trade unions.

These are just a few. Certainly the President's Commission on the Status of Women can take credit for these and many more, as a result of creating an awareness of the status of the woman and the need to improve this status. I should mention that American Women has been translated into Italian, Japanese, and Swedish.

There were many groups that moved for this improvement. Certainly the labor movement should receive its share of praise in moving towards these goals.

Many international unions long have sought improved job opportunities for women; many have pressed for the inclusion of equal pay clauses in collective bargaining negotiations and other methods of improving the status of women.

I am proud of what IUE has done in the field of women's rights. In 1957 President Carey called a Women's Conference of IUE trade union women. In his keynote address to that group, he urged passage of provision for extended coverage of the minimum wage law, he discussed the needs that must be met as a result of automation, and he spoke of the need for women to qualify in all occupations.

I am certain we in IUE shall continue to attempt to improve the status of women so that before long there will be equal treatment for all. This conference is an example of what can be done--how we can all move in the same direction.

DISCUSSION WORKSHOPS

Conference participants assembled in three discussion workshops. Each discussion group had a leader, one or more resource specialists, and a reporter. Some of the questions discussed are listed under each workshop topic.

PROBLEMS OF WOMEN ON THE JOB

Discussion Questions

1. The "war" between the sexes has been the subject of some good-natured and some not so good-natured kidding--probably ever since Eve. Do you think there is any truth in this notion? That is, do men combine against women? Do women combine against men? How does the "war" between the sexes show itself on the job?

2. Manufacturing firms generally do not have women in top jobs in the office nor in the shop, and even nonmanufacturing companies in which women predominate--hospitals, school systems, retail stores, banks, insurance companies--rarely have women in key jobs. Why do you think this is so?

3. Are there jobs in your plant, office, or school that women do not hold? Why not?

4. What is the highest job classification (or labor grade) held by a woman in your company? Is another woman in line for her job when she leaves?

5. Do women have equal opportunity for promotion and transfer in your plant, office, or school? Do they have it in some respects? If so, how did they get it?

6. Some employers claim that men are more versatile employees than women, and therefore worth more money, even when they do work identical with the women's. What do you think?

7. Even when men are victimized by lower rates of pay for women, they sometimes support the differential. Why is this so?

8. It is often argued that women do not have the same family obligations men have and should not get the same pay. What do you say to that?

9. When cutbacks in employment occur, there usually is strong pressure to lay off the women first. How do you feel about this? What about widows, divorcees, women supporting aged parents? Do you think men also should be laid off on the basis of need?

10. Some employers argue that women cost more to employ than men do. They say women have higher absentee rates and higher quit rates than men. Do you think this is true or false?

11. Employers sometimes say that the male personality is better suited to some jobs--credit manager, supervisor, furniture and household appliance selling. Is this true in your experience?

12. Is formal training offered to men in your office or shop? What kind and how long? Does it result in a substantial pay rise? Is any offered to women? How does it compare with the men's training? Do you think more training should be available to women?

13. Why do you think employers hire women? Is it because women are easier to supervise? Men are scarce? Women are more efficient in some kinds of jobs? Men won't work on some kinds of jobs? Women are less costly to employ? Employers are becoming more liberal?

14. Now consider the type of problems we have been discussing--all the various reasons and excuses for questioning the working woman's right to her job and for denying her admission to better paying jobs. Do you think the problems of white-collar women in this respect are very different from the problems of blue-collar women? In what way?

15. Women want equal pay and equal job rights. Yet at the same time they enjoy all sorts of protective legislation--State laws on the minimum pay they can be offered, the maximum number of hours they can work, the maximum weight they can lift, and so on. If they want equal rights, they must accept equal work conditions. What would you say to that argument?

16. Some unions are demanding maternity leave for their women members. Others ask for early retirement for women; or for leaves of absence or time off for personal reasons. Don't these special privileges conflict with women's demand for equal treatment?

HOW TO ACTIVATE WOMEN IN THE LOCAL'S PROGRAM

Discussion Questions

1. The war between the sexes is, in part, a kind of joke, but in your mind is there any factual basis for the idea that there is a war between the sexes? Do men combine against women? Do women combine against men? Is a war between the sexes evident on the job? Does this same relationship show in the union?

2. Imagine a plant where the foreman and men have combined to restrict women to low-paying jobs. Without a union, what could the women do? With a union, what can they do if they have a standard contract?

3. The same men who once discriminated against women before the union was organized enforce women's rights once the union is organized; and the men have union responsibilities. Is this so? If so, why?

4. Some people have said that the strongest defense against discrimination and prejudice in a plant or in the economy is seniority. Do you agree? Why?

5. Are women reluctant to write grievances? Are they reluctant to run for local union office or serve on union committees? If they are, why? If they are not, what prevents them from doing these things?

6. Do men encourage or discourage women to run for office? How do they do this? How do women react to their attitudes? Have you ever encountered a situation like this? What did you do?

7. Would conditions be better or worse if women had more positions of union leadership?

8. In what leadership roles can union women participate most effectively?

9. In a shop the married women are united against the single women, and the single women regard the married women as their chief enemies. What kind of problems might divide them and how would you deal with them?

10. How do you go about organizing women in a local so they can work effectively on women's problems?

11. When a union is organizing a company that employs a majority of women, the union organizer generally is a man. Why is this so? Would women organizers be more effective?

12. Do you think a women's auxiliary within a local would strengthen the union?

13. In Israel, nonworking wives of union members are permitted to belong to the union. Do you think this is a good idea?

14. Are women really different as union members? Do women really want to be treated differently as union members? Does the answer to the above have anything to do with the apathy of women unionists?

WOMEN'S INVITATION TO COMMUNITY ACTION

Discussion Questions

1. In what areas of community action are the members of the discussion group now participating? What brought about your joining in this activity?

2. What kinds of programs do these organizations conduct?

3. Do any of the Girl Scout or Boy Scout programs involve bringing an awareness of social problems to the children? Are these groups interracial? Do they ever visit slums? Can or should such activity be encouraged?

4. In what kinds of activities other than those already mentioned do your friends participate?

5. The League of Women Voters and civic associations frequently concern themselves with problems of taxes, government, and the like. Could union members make a contribution in these discussions and programs?

6. What about other groups such as garden clubs and church groups? Are civic questions discussed? Do they help form opinions that are reflected later in political decisions? What role do union members play in such situations?

7. What can you do in your local to sharpen awareness of these avenues of activity in the community?

8. What can the union do to involve the wives of union members in the activities of community life?

9. Assume you are on a committee to compile a list of proposals relating to women's problems that should be put in the platform of the two major parties. What recommendations, as women, would you make?

10. How does all this relate to the political program of the AFL-CIO in 1964?

11. What has been the participation of this group in this election?

12. What is your idea of a good method to get women to take an active interest in politics and to vote?

13. Governor Richard J. Hughes has appointed a 19-member commission to study the status of women and to determine how the potentials and abilities of New Jersey women can be more fully developed. In what ways can the union aid the commission in its inquiry?

EMPLOYMENT PRACTICES AND WOMEN WORKERS: THE NEW JERSEY EXPERIENCE

Mr. Raymond F. Male
New Jersey Commissioner of
Labor and Industry

A summary of Mr. Male's remarks follows:

Mr. Male pointed out that 800,000 women comprise about one-third of the working force in New Jersey. In outlining laws covering women workers in New Jersey, he referred to some laws as being obsolete. He mentioned those that limit the hours and times during which women may work as having had a valid purpose when enacted. He said, however, that he receives complaints from persons who now find these laws prevent them from earning overtime pay or from securing certain jobs that require regular hours.

In citing an opinion that automation would eliminate women from industry, Mr. Male disagreed, saying that with the increase of automation, women could now take on jobs with new machinery that they formerly could not handle.

The labor commissioner said his main concern at the moment was the 50,000 young people in New Jersey between the ages of 16 and 21 who were "doing nothing." Half of these were girls. He blamed the condition on inadequate education together with racial discrimination and general poverty, which result in lack of motivation.

Commissioner Male also criticized pensions that unions were negotiating. He indicated they "prevent mobility of employees." Instead of pensions, he believes there should be a supplementary social security plan, centrally funded and administered, to "stay with you wherever you go."

Mr. Male concluded his remarks by calling on unions to take on the responsibility of working for changes and improvements in services the State provides. He suggested that unions look beyond their traditional demands and work for new programs that hit at the deep social problems of today.

SUMMARY OF WORKSHOP REPORTS

Mrs. Agnes M. Douty
Chief, Field Division
Women's Bureau

Each of the three reporters has given back to her group the conclusions that group has reached, and I see my job as that of pooling those separate reports into a whole, so that we may have an overall view of the combined thinking.

The conclusions I have recorded as being pertinent to the discussion, and maybe a little impertinent to the subject, run the whole gamut of opinion, fact, myth, and outworn theory. The confusion today about the role of women and their place in society is caused by the fact that for the first time in the history of women workers, they have become a fixed factor in the labor force.

Women workers are here to stay. That may be good; it may be bad. It depends upon who thinks it is good and who thinks it is bad. Nonetheless, we are here to stay in the labor force. We have to take ourselves much more seriously than we have taken ourselves before, and perhaps if we do take ourselves much more seriously, the men will take us more seriously. Many of these things we have talked about, I think, are hangovers from the past. Men have not yet caught up with the reality. Therefore, our job is to make them realize that this is a new era. It is a new era in which we can work together and accomplish much more than is possible through a separation of the sexes. In any case, I am against the separation of the sexes. I like sexes--both kinds, simultaneously.

From your workshop discussions there appears to be general agreement, on the whole, that women are in the labor force to stay. There also appears to be general agreement that there is a war between the sexes despite this fact. Again, this may be due to a lack of catching up with the times.

But the real question is, why is there this feeling that there is war between the sexes in the world of work? Is it based on fact? Is it based on reality? Or is it that women are always asking for more than they have a right to get, as a man sees it? According to your own responses, there seems to be a general agreement that this is so. On the other hand, women say that primarily in the field of employment there are discriminatory practices that affect their right to choice of employment, their opportunities to advance in employment, and their right to training for advancement in employment.

Women say that personality, in many instances, has become a more important factor in a working situation than the fact that women should be judged on the basis of job accomplishments rather than on lesser distinctions.

Employers--most of whom are men--believe there is more absenteeism. Many insist that women are less responsible on their jobs than men are. This happens to be an area in which there has been serious research to find out if this is actually so or if it

is something people believe without any factual basis or foundation. It is an area in which research was carried out for the President's Commission on the Status of Women. After very competent research, it was agreed that this was not a real issue; that women, especially the older women who come back to the labor force, are able to adjust themselves completely to their jobs, if they are interested in them. Basically there is less absenteeism among mature women on the job than there is among men.

The reason for absenteeism among men is that men seem not to take care of themselves as quickly as they should when they have a serious physical problem. What this does, of course, is aggravate the condition to the point that when they finally do go off their jobs, they have serious ailments that result in lost time over a longer period. Therefore, their absenteeism rate is greater than that of women, although it appears to many employers that women have a higher absenteeism rate. In other words, when a man removes himself from employment because of illness, it takes much longer for him to get back, because he allowed the illness to become serious. Women tend to anticipate this. They may have more frequent needs to be away from their jobs, but the total amount of absenteeism is far less in a year than that of men. This is what the study reveals, and this is what we think is the fact rather than the myth.

Another question raised here was one that I think was raised in each of the three sessions. What about the implications of seniority in terms of the status of women on their jobs?

The general consensus that I have gathered from the reports of all three of your reporters is this: Women feel that a strictly enforced seniority system could help wipe out some of these antagonisms that women have felt against men. Lack of enforcement is a source of irritation.

The charge also was made that it is very difficult indeed to get women out to meetings in the evening. I think all of us would agree that this is probably true. What we have to do is look for factors that make this true. When a woman leaves her job to return to the household, her evenings are filled with many details that have to be taken care of at home. They are details of shopping, cooking, keeping up with the kids, being with the children so she knows where they are, being in the position where she can relate to them. She carries the burden on from her job to her home. She must continue in the role of wife and mother, as well as wage earner. So it may well be true that this is an extra burden on the woman. She has to be highly motivated to pick herself up in the course of an evening or several evenings and go off to a union meeting. On the other hand, it might well be that if union education directors were ingenious enough to think in terms of more interesting programs for its women members, more trade union women might be willing to go to meaningful meetings in which ideas are discussed and in which they can participate in decisionmaking rather than just be "talked at" by the men. I think the labor education programs that are being developed need to build more variety and meaningfulness into union meetings.

We must develop more effective approaches in labor education programs, both in the universities and in the union. Since I have been in both fields, I feel very strongly about this. We must develop more meaningful and exciting programs to bring both men and women into union meetings when there is need for discussion. We must also realize that there are many other things that keep people away from union meetings. There are the distractions of TV; there are the bowling clubs; there are all of the recreational events that should also be available to both men and women after a hard day. These act as deterrents against rushing off to a union meeting after a long day of work.

This is not a matter of sex. I think we have to understand that. I think that many men as well as women will stay away in a given situation from a trade union meeting. It is probably true, however, that if women are the majority in a plant, more of them will participate. The men, who are the minority in that group, will tend to stay away because

women dominate them. These are the kinds of consideration that will determine whether it is worthwhile to go out to union meetings. The distance from home is also a factor. These are not meant as excuses. What we are saying is that it is not a matter of sex. Women stay away no more than men in the total spectrum of attendance at union meetings, and we should recognize that fact. What we ought to be doing, therefore, is trying to make union meetings as attractive as possible for both men and women, and then see whether this has added something to the dimensions of the meeting, and whether it has interested women more in some of the basic problems on the job.

Women do resent the fact that where women are predominant in a local or occupation, they are not given the choice of whom they will select to be their leader within the local. Leaders are appointed by the shop chairman or by someone who occupies a higher position in the union. Usually this is imposed from above rather than from below. The local union president appoints without consultation.

Another charge has been made that women do not like to give up the security of one job in order to move into a higher position or into a management position. This may well be; I am not sure. I have no way of knowing whether this is actually something that is meaningful in these terms. The question that I raise is, how often are women offered jobs that take them up into managerial positions? How often, even if they are accepted in these jobs, do they receive the same pay that men would have received for those positions? I think most of us know the answer.

On the other hand, there are women who feel that if they had an opportunity to test their ability for a better job, and not be penalized if it becomes too much of a burden along with all their other responsibilities, they might try for higher stakes. This might be something that could be explored in a union shop. This also could be a kind of testing ground to find out whether women can move into upper echelons more rapidly in the shop. More opportunity for promotion should be available.

On the other hand, when we ask men why women workers feel that men discriminate against them, men cite the following grievances: Women, they say, are unstable in their jobs. They are not willing to abide by the terms of the contract when they are in an organized shop. Women raise all kinds of irrelevant issues. Women, on the other hand, say that men feel women are against them when they question a man's judgment.

In one of the three workshops there seemed to be general agreement that the Equal Pay Act of 1963 was a forward step for women workers in reducing the sense of being discriminated against simply on the basis of sex. There was also agreement that men as well as women need protective labor legislation on the job, and that men as well as women should be involved in trying to improve existing legislation. This was disputed in another group. It was felt that the protective legislation now existing in a number of States is a handicap to women, because they are not allowed to work the longer hours that men may work. They are subject to certain weightlifting restrictions and to restricted hours. This is the one real conflict I have heard while visiting your discussion groups.

There is something to be said, perhaps, for both sides of this question. My own feeling is that it would be very unwise to get rid of such protective legislation as we now have until we are assured that what we get would be better than what we now have. Until such time, we cannot afford to do away with present legislation.

We must remember that not all women are in covered industry. Many have neither the Federal coverage given by Federal laws, nor in many States do they have the State coverage they should be getting by law. To throw this protection overboard would be throwing the baby out with the bath. This needs serious consideration. I think we should take more time to explore what would be useful and what would be harmful. I think what I am suggesting is that we have to do some rethinking in this general area of legislation

for working women. Some time should be spent in labor education classes and in your own union halls in discussing the pro's and con's. Don't give up what you have before you know what you are getting in return.

In another workshop it was maintained that women can be trained for any job that traditionally has been for men. This is an area of controversy, too. There is fear that women may displace men. There is fear that we are moving into training areas that will become obsolete in a short time. This is a real problem. One of the antidotes to this, of course, is that our vocational education laws and our vocational schools must become more realistic than they are now. Many are hopelessly behind the times. Today our vocational education systems have the largest amount of money ever obtained from the Congress in the history of this country. They have millions of dollars to work with, and it must be used wisely.

Parents must keep track of what is available now through the vocational education school system. Labor must have its representatives on these advisory boards in order to know what needs to be done. They have to know that when they sit in on vocational education boards as advisers they must be prepared to speak realistically as to whether the programs being worked out in the vocational schools are meaningful for today as well as for tomorrow.

Women agree, in large part, that they could involve themselves somehow in community action more than they do now. They agree to this, and then they say they cannot do it. Again, there are many reasons why they tend not to do it. It is essential for women to involve themselves in the area of community action. There is easier contact between working women and other women in the neighborhood while shopping, at school, and other places. It is a wonderfully easy way to start meaningful discussion. Women should concern themselves more with the political and economic realities of today. They can be important in making decisions on matters they understand. The communication with neighbors on meaningful issues should be done by men and women together, but I think what I am saying here is that women have opportunities to chat with other women and to pass along ideas among themselves.

As a former teacher, I must say I feel that the teachers of America have not been pulling their weight as much as they should have. It is true that they have a pretty burdensome job. I don't believe I ever could have survived teaching on the elementary or secondary school level. Fortunately, I taught college students. That was rough, too, but it was very rewarding. I think teachers are overburdened. Their hours are too long. They have great problems of getting proper material, especially in the schools that are rundown and in which there has been very little development in terms of equipment. But in spite of this, I feel that the teachers of America could devote more of their time to some basic neighborhood problems, and that parents could be made more aware of what is needed from the schools. I think that teachers and parents should be motivated to work directly for better schools and better neighborhoods and to stimulate the churches to more active participation in social problems of our day.

There are many civic groups to which many of you belong. You should try to keep extending your contacts with all such groups. I think we in the labor movement tend to talk too much to ourselves and to our own kind. We have to learn to talk to others with different views, because these other groups may be better educated than we are, and their views may be worth learning about. Our advantage is that we probably know more about the world of work and the economic realities of American life.

I think we have to spend more time on cultivating the active and highly motivated women outside the labor movement who can do a great deal to help us reach common objectives. I believe more and more women are thinking in similar terms. If we could have this two-way discussion--this two-way airing of problems and joint attempts to solve them--we could help solve community problems that need to be taken care of.

I am suggesting here that we work openly with those groups that have the same kind of interests and the same social objectives we have, so that our strength may be three or four times what it would be without this additional womanpower. In order to do this, women have to reach out more and more to understand the social issues, and they must involve themselves in issues they never thought were their concerns. They have to concern themselves with welfare, education, and politics. They must learn how to communicate with neighbors on both sides of the fence. Some of us think of this as men's work. I say it is also women's work.

Women must be willing to learn. We must be willing to understand. We must be willing to take leadership roles when we are qualified for leadership roles; and if we are not qualified we should be willing to get the necessary training. We can be volunteers. We can be unpaid leaders, or we can be paid leaders.

There must be greater emphasis by women trying to get into the political stream. I don't mean that women should be babysitters and car drivers on election day. Women must prepare themselves and be willing to run for public office as well.

Too few women run for office in the United States. When I lived abroad, I guess I thought the United States was really backward in this respect. In France I was astonished by the number of women in the French Parliament. The French women, Yugoslav women in the early days, Dutch women, and many other groups of women are much farther ahead than we are in terms of participation in political life. We have the ability, but we just haven't thought of it as our mission. It has to be one of our missions. We have to be prepared to motivate ourselves and others to action. We have to learn to be alert to what the problem is and the real meaning of the problem. We can do it once we know how to address ourselves to the problem.

This is a wonderful period in which to be alive, despite crises in the world today--or perhaps because of them. Trade union women and men working together for common goals in the labor movement must extend their activities into the community, the city, and the State to bring about more rapidly the society of equals in which all may share. I believe this has been the first all trade union women conference that the Women's Bureau has cosponsored. Your followup from this one will, I am sure, be even more rewarding and adventuresome.

Appendix A

UNION MEMBER QUESTIONNAIRE

1. In your local, what percentage of membership is female?

   Less than half _____ About half _____ More than half _____

2. In your opinion, how well does your local serve the needs of its women members?

   Very well _____ Adequately _____ Not very well _____

3. In what areas below could your local improve its service to women members?

   Wages and salaries _____ Promotional opportunities _____

   Job security _____ Fringe benefits _____

   Other (specify briefly) _____

4. What is the highest office now held by a woman in your local? _____

5. What is the next highest office a woman now holds? _____

6. Have you ever run for office in your union? Yes _____ No _____

7. Are you now an officer? Yes _____ No _____

8. Would you be willing to run (or run again) for a top union office?

   Yes _____ No _____

   If no, why not?

   Haven't time _____
   Think men make better officers _____
   Reluctant to take criticism an officer receives _____
   Don't think members would support a woman candidate _____
   Don't think other officers would accept a woman _____
   Other (specify briefly) _____

9. Do you know another woman you would support for a top union job?

   Yes _____ No _____

10. How many years have you held membership in your union? _____

Appendix B

WIVES OF UNION MEMBERS QUESTIONNAIRE

1. What is the name of your husband's union? _____

2. Have you ever been a union member? Yes _____ No _____

3. Have you ever been employed since marriage? Yes _____ No _____

4. Do you feel that working women need unions? Yes _____ No _____

   Why, or why not? _____

   _____

   _____

5. Do you feel that unions need women members? Yes _____ No _____

   Why, or why not? _____

   _____

   _____

Appendix C

ANALYSIS OF RESPONSES TO UNION MEMBER QUESTIONNAIRE

Registrants here today represent 11 different unions. In the audience (that is, among those listed as "attendees") there are 28 union women, and all but 3 have filled out our survey questionnaire. Here's what your answers told us about you and your unions.

The largest group, 84 percent of you, come from unions in which women comprise the majority of total membership. The rest are divided equally between women from predominantly male unions (8 percent), and women from unions with a 50-50 membership mix (8 percent).

Among you, you represent a total of 348 years of union membership, which gives you an average membership of about 14 years. Here's the way that breaks down: 16 percent of you have 3 to 5 years' membership; 20 percent, 6 to 10 years; 24 percent, 11 to 15 years; 40 percent, 16 years or more. The longest term of membership reported was 26 years.

Now let's see what you think of your unions. Most of you agree that your unions do a pretty good job for their women members. Fifty-six percent of you think your union serves the needs of women members very well. The remaining 44 percent rate the union's service to women as adequate.

The next question was: In what areas could your union improve its service to women members--that is, what can your unions do to make you love them more? Here you could mark more than one answer. Wages and salaries received the largest vote (40 percent of all votes) as the area most in need of improvement. Promotional opportunities ranked second, with 20 percent of the total vote. Job security and fringe benefits tied for third place, with 17 percent each. One answer said all areas could be improved for all members. Six percent of the women considered their unions perfect and skipped that question. Incidentally, your answer to that question differed according to the numerical strength of women in the union. Women from predominantly male unions gave most of their votes to job security; women from the 50-50 unions inclined to favor promotional opportunities; and women from the predominantly female unions concentrated on wages and salaries.

Now let's consider women as union officers. Most of you, 24 percent, come from a local where the highest woman officer is president. Twenty percent named a secretary, a treasurer, or a secretary-treasurer as top woman officer; and 16 percent pointed to a business agent. Another 16 percent reported no women officers. Of course, you realize that there is a lot of duplication in those figures, since many of you are from the same local. (Incidentally, the union most heavily represented was the ILGWU with eight attendees. Next came the teachers, laundry workers, and paper box makers with five each.)

The question about the next highest woman officer was asked to shed light on the path to the top for women officials. However, 48 percent of you come from unions which

apparently have only one woman official--no second highest woman officer is listed. Evidently, no regular chain of progression for women officials has been established. Among the remaining 52 percent of the answers, 24 percent listed a vice president as the second highest woman officer; 8 percent, a president; 8 percent, a secretary or secretary-treasurer; and the rest named chief stewards and stewards.

Now let's see what your answers reveal about why there are relatively few women on the way up. The next question was: Have you ever run for office in your union? Forty-eight percent of you replied Yes; 48 percent, No; 4 percent didn't answer. However, 52 percent of you reported that you are now holding office in your union, so apparently there are some appointees among you.

The next question was: Would you be willing to run (or run again) for a top union office? You answered that one with a loud Yes; 68 percent of you declared you would, indeed! Among the seven women on the No side of that question, two gave no explanation, two explained they haven't time, one said she thought men make better officers, one feared that other members would not support a woman candidate, and one thought that other officers would not accept a woman.

And finally, 68 percent of you said you did know another woman you'd be willing to support for a top union job.

*IOWA GOVERNOR'S COMMISSION ON THE STATUS OF WOMEN, DES MOINES, IOWA, NOVEMBER 20-21, 1964

One hundred eighteen participants met to consider the recommendations of the Governor's Commission on various aspects of the role of contemporary women. Presentations were given by Dr. Marguerite Scruggs, Chairman of the Commission, Governor Harold E. Hughes of Iowa, Mary Dublin Keyserling, Director, Women's Bureau, U.S. Department of Labor, and Marguerite I. Gilmore, Chicago Regional Director, Women's Bureau. A symposium on the commission report brought the chairman of each of the commission's committees to the platform. Each in turn discussed the highlights of the commission report in his own area. They were Jude P. West of the Employment Practices Committes, Erma B. Plaehn of the State Labor Laws Committee, Marian L. Jones of the Legal Treatment of Women Committee, Margaret K. Yoder of the New and Expanded Services for Women Committee, and Elizabeth S. White of the Educational Needs of Women Committee. Groups discussed employment practices, state labor laws, legal treatment of women, new and expanded services, and educational needs of women. Suggestions were given for implementation of the recommendations by Dr. Helen R. LeBaron, Dean, College of Home Economics, Iowa State University and by Mrs. Alice M.V. Myers, Executive Director, Y.W.C.A., Des Moines, Iowa. (FP)

FOREWORD

This report provides a summary of the sessions of the statewide meeting of the Governor's Commission on the Status of Women held at Hotel Savery, Des Moines, Iowa, November 20-21, 1964. An interim report was presented to Governor Harold E. Hughes and interpreted to the Iowa citizens present at the conference sessions.

The conference was sponsored by the Iowa Governor's Commission on the Status of Women and the Women's Bureau of the U.S. Department of Labor.

We acknowledge with appreciation the efforts of the many individuals who prepared the interim report, planned the conference, and participated in it. Special thanks are due Miss Marguerite I. Gilmore, Regional Director, Women's Bureau, U.S. Department of Labor, Chicago, Illinois, and Mrs. Betty Talkington, Director, Women's Activity Department, Iowa Federation of Labor.

3. Legal Treatment of Women

4. New and Expanded Services

5. Educational Needs of Women

3:15 p.m. General Session--Presiding: Dr. Marguerite Scruggs

Suggestions for Implementation of Recommendations: Report by Dr. Helen R. LeBaron, Dean, College of Home Economics, Iowa State University

Report by Mrs. Alice M. V. Myers, Executive Director, Y.W.C.A., Des Moines, Iowa

CONFERENCE OBJECTIVES

To present to Governor Harold E. Hughes the first report of the Iowa Governor's Commission on the Status of Women.

To interpret to the citizens of Iowa the recommendations of the committees to the members of the public attending the conference.

SUMMARY OF CONFERENCE PROCEEDINGS

OPENING SESSION, Friday, November 20, 1964

MR. GEORGE W. MOORE, Director of the Iowa State Employment Service, presided at the banquet session of the statewide meeting of the Governor's Commission on the Status of Women. After explaining that one of the main functions of the evening was the presentation to Governor Harold E. Hughes of the first report of the Iowa Commission on the Status of Women--appointed by him in October 1963--he introduced the Commission Chairman, Dr. Marguerite Scruggs, head of the Department of Home Economics Education at Iowa State University.

DR. SCRUGGS thanked Governor Hughes, on behalf of the 25 members of the Commission on the Status of Women and the more than 25 other people who served as committee members, for the privilege of serving on the commission and expressed appreciation for his interest in furthering a study of those conditions in Iowa which influence not only women but all citizens of the State.

"You asked the commission to study five areas and to make recommendations for needed action," Dr. Scruggs said. "This first report--and we are saying 'first' because we are quite certain that it isn't completed--summarizes what has been accomplished so far in the way of findings, makes recommendations, and points out areas that we think need further study. The five areas that have been studied focus upon the different roles of women, but our intent is to look at the total picture of women in Iowa, and to suggest ways to improve what in many aspects is already an excellent image.

"Governor Hughes, we appreciate your willingness to let us share this report with those here tonight. It is a real privilege to present to you the first report of your Governor's Commission on the Status of Women."

GOVERNOR HAROLD E. HUGHES accepted the report and commented, "I am pleased that you are on time with your report. I am amazed at what can be accomplished with no money. This is an excellent working production. If we could operate all departments of State government as efficiently, I wouldn't have the problems I have today. I want to express my personal appreciation to Dr. Scruggs, to all of the members of the Commission on the Status of Women, and to all those who cooperated with it. This is not a moment of discontinuance, but rather a moment of rededication to what must be a continuing study. When I decided to follow the guidelines laid out by the late President Kennedy, I hoped that this study could be implemented in the coming session of the general assembly.

"We realize that here in Iowa some problems are not as great or acute as they are in many other areas of the Nation. But at the same time, the problems are sometimes so subtle that they are overlooked and therefore need to be investigated more thoroughly.

"Though I haven't yet read the report, I know the capabilities and dedication of the people who produced it. I am certain it is an excellent report, and I hope that we include some of the recommendations in future legislation. I want to thank every one of you personally for the contributions you have made. I realize that in some States, commissions have been established by statute and have been provided with funds. Even if we had a statutory commission and if you had had some money other than what you rounded up yourselves, I am certain the report would have not been more ably done. This alleviates my conscience a little. Perhaps I can hold you up as an example to other commissions: 'The ladies accomplished this without any money.' Certainly others should be able to be as resourceful as you have been.

"I can only say thank you from the bottom of my heart and hope the dedication you have shown will result in the improvement of the status of women in our State--your goal and ours as well.

"Thank you very kindly."

Mr. Moore then introduced Mrs. Mary Dublin Keyserling, Director of the Women's Bureau of the U.S. Department of Labor.

MRS. MARY DUBLIN KEYSERLING: "This is an historic occasion. The presentation to you, Governor Hughes, of the splendid report of your Commission on the Status of Women marks another great milestone of progress for women. I know the report will open the doors to greater opportunity for women in Iowa and will benefit all women throughout our Nation. For, as some of us advance, all of us enjoy brighter prospects for progress. May I congratulate each and every one of you who has played a part in this heartwarming undertaking.

"You have asked me to say a few words this evening on what has been happening to the status of women generally in the United States.

"It is no exaggeration to say that a veritable new climate of opinion with respect to the position of women in our society is in the making. Everywhere one finds greater recognition that women's place is wherever brains and hearts and hands are needed. Except for that momentous time back in 1920 when the 19th amendment was pushed through to passage, there hasn't been a period in this century in which so many heartening gains have been won as in these past 3 years.

"Just as here in Iowa, groups of able and thoughtful men and women throughout our whole country have been engaged in a review in depth of women's changing role, in an analysis of those barriers which still impede the full realization of women's rights and limit the contribution they are eager to make, whether it be on the job or in the community. Laws affecting their civil and political status and every other aspect of their lives are being scrutinized. Schools and colleges are reexamining their approaches to the educational needs of women. Employment policies are being reviewed. What new services are needed? How can we further strengthen homelife and contribute to family security? These and a myriad of other significant questions are being raised the length and breadth of the land.

"This unparalleled ground swell of interest is apparent at the grassroots. It is more than apparent--it's dynamic and clarion clear at the highest point of national leadership. President Johnson at his very first Cabinet meeting declared, 'The day is over when top jobs are reserved for men.' A few weeks later, you may recall, at the time he made public the names of the first 50 women he appointed to top posts in Government, he said, 'I would like at this time to make a policy announcement.' And then he said, 'I am unabashedly in favor of women.'

"The President went on to speak of his commitment: 'I am insisting that women play a larger role in this Government's plans and programs. Women have a willingness of heart. Moreover, they have an instinct for rightness that is as important to decisionmaking as numbers or logic.' He spoke of his intent to 'bring women of imagination and energy to the fore,' in all the big and challenging jobs to be done. It's clear a very good day is dawning. The President has set the pace for nationwide advance.

"President Johnson has made the upgrading of women in the Federal service a major objective. Between January 1 and October 2, 1964, he named 68 women to top Government posts. In addition the executive agencies have appointed 311 and promoted more than 1,231 others at salary levels of $10,000 and more. The showcase example of the Federal service is benefiting women everywhere.

"As you know, this great upsurge of interest in larger horizons for women--in the fuller use of their abilities and skills in every phase of our national life--was given its major impetus by the work and recommendations of the Commission on the Status of Women appointed by President Kennedy in December 1961.

"You may remember he appointed 26 outstanding men and women as members under the chairmanship of Eleanor Roosevelt. As we pay tribute to the work of your Iowa commission, I know we want to acknowledge together our deep debt of gratitude to that very great lady whose heart encompassed all mankind.

"She understood so well that the task of a commission on the status of women is but a part of the total task which confronts our great Nation. Our times differ from all those that have gone before. For the first time in history, we can say we have the skills, the resources, the know-how to realize man's ancient dream of release from hunger, poverty, and deprivation. We have but to use these skills and resources fully, wisely, and well to provide the good life for all our people. And women's skills and 'willingness of heart,' to use President Johnson's felicitous phrase, are a part of this national bounty which must be fully drawn upon.

"Under the leadership of the President's Commission, the whole nature of the discourse about the status of women has moved in new directions. No longer do our discussions focus solely on rights or needs or the desire to fulfill personal aspiration--important as are these objectives. It centers even more on how the contribution of women to the world around them can be maximized. As never before, women want to rise to new responsibilities.

"On October 11, 1963, the national Commission presented its recommendations to President Kennedy. I hope you all have read its report, 'American Women.' It is inspiring reading. No one who played a part in the Commission's work could have anticipated then how much was to be set in motion by way of new advances. The results have far exceeded expectation.

"Last year, Congress, accepting the Commission's recommendation, passed the equal pay law. The very large numbers of women employed in interstate commerce are already reaping the benefits of this legislation.

"I have mentioned the larger opportunities that have opened to women in positions of high responsibility in Government. This is but part of a determined effort to make the Federal service a model with respect to employment policy.

"As a result of a Presidential directive, both hirings and promotions are being made by all Federal agencies on the basis of qualifications alone, without regard to sex.

"Also following the Commission's recommendation, the U.S. Employment Service has taken steps to encourage acceptance and use of hiring specifications based exclusively on job performance factors, on the part of the very large number of employers throughout the United States who use the employment service.

"We have seen included in the Civil Rights Act, enacted last summer, a provision ruling out all discrimination in employment on the basis of sex. This applies to all women in industries affecting interstate commerce. Although this action was not a specific recommendation of the President's Commission, one wonders whether such a provision would have been included in the law had not the Commission done so much to draw national attention to discriminatory employment practices. A Commission to administer this portion of the Civil Rights Act, which goes into effect next July, is shortly to be appointed by the President.

"When the work of the President's Commission terminated in October 1963, President Kennedy in an Executive order declared that enhancement of the quality of American life, as envisaged by the Commission's report, can be accomplished by both public and private groups, through coordinated action within the Federal Government, and through action by States, communities, educational institutions, voluntary organizations, employers, unions, and individual citizens.

"To help fulfill continuing Federal responsibility, President Kennedy appointed an Interdepartmental Committee on the Status of Women composed of Cabinet officers whom he asked:

to review and evaluate progress of Federal agencies in advancing the status of women, and to do so on a continuing basis;

to serve as a clearinghouse of information on what is being done to improve conditions of special interest to women;

to stimulate cooperation and the sharing of data, views, and information among Federal agencies, State and local governments, State Commissions on the Status of Women, and public and private organizations having responsibilities and interests of special concern to women;

to encourage research on factors affecting the status of women.

"I can tell you, on the basis of close observation and, in fact, participation, that the Interdepartmental Committee has been conscientiously carrying out its duties. Just very recently the Secretary of Labor, at the request of the President, wrote to every agency of Government, asking them to give him a progress report by the end of the year on what they are doing to give women full equality of employment opportunity. The reports which are coming in are immensely encouraging.

"President Kennedy also appointed a Citizens' Advisory Council on the Status of Women composed of 17 members. This Council is charged with responsibility:

to suggest and stimulate action with groups and individuals working for the improvement of conditions of special concern to women;

to review and evaluate their progress in furthering the full participation of women in American life;

to advise and assist the Interdepartmental Committee in evaluating progress and to recommend action to accelerate it.

"And this Council has been hard and very constructively at work.

"Just a few weeks ago these two bodies--the Interdepartmental Committee and the Citizens' Advisory Council--sent to President Johnson their first annual progress report. This report covered advances in the Federal executive branch and legislative progress at the national level. It covered gains in the States--relating both to legislative action and most especially to the truly exciting contribution of the 33 State commissions on the status of women which have thus far been appointed.

"The report summarized only the highlights of the progress made during the course of this past year, yet it runs to 27 printed pages. So you will appreciate why I can't summarize for you in detail this evening what has been transpiring. I hope you will want to read this interesting report. You may obtain a copy by writing to us at the Women's Bureau.

"Legislative gains and administrative improvements are concrete and specific. They can be identified easily. Perhaps even more important are the more subtle changes that are brought about in the attitudes of people--attitudes that shape women's role and affect opportunities. It is here that the report of the Commission and especially the reports of its seven committees have had a most important impact, too diversified and far-reaching to be appraised in the time we have at our disposal this evening.

"There can be no doubt that a ferment of reappraisal and reevaluation has been stimulated everywhere, not only at home but abroad. The Commission's report has been translated into Japanese, Swedish, and Italian. Denmark has established a commission. The Director of the Women's Bureau in Japan has urged similar action. Other countries are expected soon to follow suit.

"The status of women is improving everywhere around the world. The head of the International Division of our own Women's Bureau spent several weeks this summer in Malaysia, working with the National Council of Women's Organizations which has recommended the establishment of a Women's Bureau. This rising interest in advancing the welfare of women is manifest in many other developing countries. Political rights are expanding almost universally. Isn't it good to be able to say that in 106 countries of the United Nations, women may vote in all elections and are eligible for election to office on an equal basis with men? In six countries the right to vote and/or the eligibility of women to hold office are subject to limitations not imposed on men. In only eight countries and in one region of another, women lack voting rights and are not eligible for election--but in two of these I can report that neither men nor women enjoy electors' rights.

"I wish there were time to talk of the numbers of women abroad serving their countries at the cabinet level, as ambassadors, and in other top capacities. But it is very clear that all over the world we are moving ahead together. Progress is rapidly on the way.

"And nowhere are more heartwarming developments to be observed than at the State and local levels here in America. This is because of the kind of work being done by Governors' commissions on the status of women.

"I have already mentioned that 33 State commissions have been appointed. Yours is the fourth State to submit an interim report. The first commission to file its final report--in the State of Washington--was immediately reappointed to go on with this job.

"The State commissions have been doing a remarkably good job seeking every possible way whereby women's needs may better be served and whereby women may better serve our communities and our Nation. They have been holding public hearings and public meetings such as this. Countless committees have been hard at work. The concentrated study and analysis that have been done are bound to lead to unprecedented new gains.

"Our commissions are mobilizing the resources of the widest and most representative range of individuals and organizations. They know how important it is that findings reflect the needs and problems of all women, especially those whose needs are the greatest. They know, too, how important it is that all groups participate if recommendations are to be effectively implemented.

"We anticipate improvements in employment practices in the States and localities. A year ago when your distinguished Governor appointed the Iowa commission, he said, 'Government should lead the way in breaking down discriminatory hiring practices, whether they are directed toward minority groups, aging workers, or women. It can lead best by setting a good example.' He urged that the practice of State and local government agencies be examined to see whether they allow women to make contributions equal to their capacities. He said so well, 'The desires and circumstances of the individual woman should be the deciding factor as to whether she works inside the home or in an outside job, or combines the two. If she has the need to work, however, she should be able to do so without the fear of discrimination.'

"Twenty-six of our States do not as yet have equal pay laws. We already see a great activation of interest in this legislation.

"The work being done to inquire into the need for the extension and improvement of protective labor legislation has already brought home to large numbers of people the fact that millions of women are still being paid distressingly low wages. Already we see evidence of greatly accelerated interest in the improvement of existing State minimum wage legislation and in the enactment of such legislation in many of the 20 States in which minimum wage laws or orders are not now in effect. To the Commission on the Status of Women in Michigan goes much of the credit for an excellent minimum wage law, which was enacted just a few months ago and which protects women and men alike.

"Action in this area would help provide the added purchasing power we need to turn the wheels of industry more rapidly. It would help mitigate the problems of poverty. There are nearly 400,000 women wage earners in Iowa, yet Iowa has no laws assuring a minimum wage, equality of pay, or regulation of hours of work--all matters of deep concern to women workers.

"It's interesting to note that figures for a recent year indicated that over half of the experienced women workers in Iowa had annual earnings of less than $2,000.

"Said Governor Hughes so rightly when he appointed your commission: 'If we accept the working woman as a reality, we must accept the responsibility for providing her with equal employment opportunities, protective labor standards, and suitable working conditions. . . . If we are to maintain the strong family relationships that are the backbone of the stable society, we must continually reassess the employment problems of working women and their implications for the health and economy of our State.'

"Thanks to what your commission is doing and to the admirable leadership of your excellent Governor, we can all be confident that changes for the better are in store.

"The State commissions are stressing the importance of improved vocational guidance programs for girls and older women. They are stimulating new approaches to education, stressing the need for part-time study programs to enlarge opportunities especially for the mature woman who seeks to get her high school diploma; a B.A. or M.A. degree now so widely needed for teaching, social work, and other professions; or training for nursing or other careers.

"Our State commissions are helping to call attention to the need to enlarge part-time employment opportunities for women.

"There will be more widespread provision of homemaker services and of day care facilities for the children of working mothers, thanks to the work of the commissions. New efforts will be made to upgrade the status of women in such relatively disadvantaged occupations as household service. Employer and employee alike will benefit.

"Commissions everywhere are saying to American women: 'Your pattern of life has changed. You are marrying younger. You are bearing your children at younger ages. By the time you reach the age of 35, your children are launched in school. Your homes are easier to manage. You can look ahead to a long span of 30 or more years you want to use creatively and constructively. This is because in the last half century the average expectation of life of women has increased by 25 years.' The commissions are asking, 'What will you do with this great gift of time--time for the use of talents, time for the exercise of responsibilities?'

"Paid employment is not the only challenge, although many women must hold jobs to help meet the basic economic needs of their families. Those who have the privilege of choice as to how they best can use their time now have virtually unlimited opportunities to serve in volunteer capacities in every phase of community endeavor.

"The events of our times are far too important for any of us to stand on the sidelines as spectators. All of us must become involved as active participants. There are endless jobs in which we women can play a vital part. There is not an area in America--rural or urban--where there are not exciting and rewarding jobs to be done.

"We can liquidate poverty within a decade or two. This requires greater understanding of the lives and problems of the poor. It requires study of our interrelated economic problems and our public policies. It requires devoted service. We women are fitted by temperament and interests for this work.

"We can rebuild our slums and renew our cities. This calls for research, education, and creativity. It calls for working with the problems of neighborhoods, cities, and metropolitan areas. There is almost unlimited need for leadership effort here. Women are admirably suited for this work.

"For these and other phases of the task of building the Great Society--tasks too numerous to mention--we need to lift our sights. We need to realize that what we want to do is not greater than our capabilities to do. If we put all our able and willing workers to work, if we translate the new technology and automation into goods and services, instead of allowing them to create idle manpower and plant, there will be more than enough to meet all our needs. There will be so much, indeed, that progress for those at the bottom of the income

structure can be accompanied by progress for both those in the middle and even those at the top. The mutual interests of all should lead to the cooperative effort of all.

"This has important bearing on the position of women in our society. Economic expansion has particular significance for us. When our economy is expanding rapidly, there is room enough for all. When jobs are plentiful, no one challenges the right of all to seek employment opportunity. Discrimination dissipates. Mrs. Roosevelt put this so well when she said: 'Because I anticipate success in achieving full employment and full use of America's magnificent potentials, I feel confident that in the years ahead many of the remaining outmoded barriers to women's aspirations will disappear. Within a rapidly growing economy, with appropriate manpower planning, all Americans will have a better chance to develop their individual capacities, to earn a good livelihood, and to strengthen family life.' It's wonderful to see all that the State commissions are doing to move us toward these and our other vital goals.

"Best of all, the work of the commissions is not drawing to a close. Before the end of the year we expect that commissions will be appointed in three or four additional States. And before very long, we anticipate the appointment of a commission in virtually every State in the Union.

"How good it is to know that here in Iowa, as in other States, the Governor regards the work of the commission as too important to come to a halt even after the final report has been submitted. There's a continuing job to do to help implement recommendations and to carry forward the task of factfinding and identification of need."

MORNING SESSION, Saturday, November 21, 1964

The morning session was called to order by Mrs. Talkington, Director, Women's Activity Department, Iowa Federation of Labor, and secretary of the commission.

After introducing members of the commission and members of the committees who worked with it, Mrs. Talkington appealed for funds to repay the debt incurred by the commission in issuing its report. She expressed appreciation to the many people who contributed their talents above and beyond the call of duty, and explained that the $300 referred to was for paper and printing plates. Mrs. Talkington thanked by name the many individuals who helped to prepare the report for printing.

The chairman then introduced Mrs. Mary Dublin Keyserling, Director of the Women's Bureau and keynote speaker for the statewide meeting.

MRS. MARY DUBLIN KEYSERLING, Director of the Women's Bureau, U.S. Department of Labor warmly praised the work of the Iowa commission.

"Our Governors' commissions on the status of women, which now exist in 33 States, are doing an urgently needed job. While the position of women in the United States has improved immensely over the years," Mrs. Keyserling stated, "nevertheless, it is abundantly clear that women's talents and skills are not being fully drawn upon. Our society is much the poorer for this."

Mrs. Keyserling pointed to the great increase in the participation of women in the labor force. "Today about 45 percent of American women, aged 18 to 64 years, are now in gainful employment. This represents a 30-percent increase since 1947 in the percentage of women of this age working. The number of women at work has doubled, in fact, since before the war. Yet," she said, "the figures indicate that they tend to be more concentrated in the relatively lower paying, lesser skilled jobs than their education, training, and abilities warrant. This is a poor use of womanpower.

"While more women hold top jobs than ever before, the percentage who do so still remains very small," Mrs. Keyserling declared. She pointed out that "only about one-half of 1 percent of the 32 million women who worked some time during last year had money

incomes of $10,000 or more. More important, only 2 1/2 percent received $7,000 or more." Mrs. Keyserling stated, "Wages of both men and women are rising. The standard of living of the average American family has doubled since before the war, after allowance for price rise. Yet we find that men's wages are rising considerably more rapidly than are women's.

"A comparison of the median earnings of men and women employed full time and on a year-round basis indicates that in 1963 women received on the average only 59 percent of what men were paid. The wage gap varies greatly from industry to industry. In professional and related services and in public administration, the two fields in which women are relatively better off in terms of remuneration, our median earnings at full-time year-round work were only about 70 percent of those of men similarly employed. In sharp contrast, our earnings in personal services averaged only about 36 percent of those of men.

"What is more distressing than the existence of the wage gap in the relative wages paid to women and to men is that it has been widening over the past 24 years in every major industry group in which large numbers of women are employed.

"Indicative also of the fact that women are becoming increasingly rather than less concentrated in the lower paid, less skilled jobs is the fact that we now represent a smaller proportion of those in the professional, technical, and kindred fields than we did 16 years ago. In contrast, we comprise a considerably larger proportion of clerical and service workers--obviously far more disadvantaged occupations.

"These trends, which indicate an unconscionable waste of human resources--of the skills and talents of women, cannot be explained away by relative lack of education. Actually, the average number of years of education received by women is slightly higher than in the case of men. But women are faced by many restrictive hiring practices. They are faced by discrimination in promotions. They are faced by myths, running entirely counter to the facts, which assert that women make poor supervisors, or that they have substantially higher rates of absenteeism and labor turnover. The claim is often made, and without the slightest justification, that even women with more than adequate training and knowledge lack the ability to assume higher level positions in industry.

"We know also that all too little has been done to achieve arrangements making it possible for more women to play effectively the dual role which so many seek--to be good mothers and still to contribute as jobholders or volunteer workers. We have done far too little by way of providing services needed to maximize women's contributions in this dual role.

"And, of course, we know very well that we confront obstructions as women, not only in our jobs, but in many other aspects of our lives. Our role in public life remains far from commensurate with our numbers, skills, and abilities. I was distressed to see--and I imagine you were, too--that in this past year's elections fewer women were running for Congress than in many years. Many State laws related to our civil and political rights are antiquated. Many of our educational institutions and services have not been adapted as rapidly as they should be to changing patterns of women's lives.

"The commissions are also active in promoting increased participation of women in volunteer services. Some are discussing means for better coordination of recruitment, placement, and training. There is so much constructive work to be done in every community in America in which more women could lend a helping hand.

"While we should be pleased with the progress the President's Commission and the State commissions are making possible, nevertheless, we should be realistic about the length of the road that still remains to be traveled. We haven't yet arrived at that happy time when we can stop talking about status and about special problems women still face. When any large group of people in our society is relatively disadvantaged, continuing attention ought to be concentrated on the inequities, on the serious waste inherent in failure fully to utilize talent.

"Weighing remaining problems against progress, however, the picture is encouraging. A new spirit is making itself felt, a spirit that reflects the best of our democratic traditions--the determination to provide a climate conducive to the maximum development of the potentials of all people.

"This is a unique and exciting moment in history. For the first time we can say we have the skills and resources which if properly used can make life comfortable and rewarding for every American. At long last we know our society can be what we make it. We women reach for larger opportunity because we want above all to help hasten the day when we can say the good society we seek is truly close at hand for all."

A symposium on the commission report brought the chairman of each of the commission's committees to the platform. Each in turn discussed the highlights of the commission report in his own area.

MR. JUDE P. WEST, chairman of the Employment Practices Committee; head of Government Services, Bureau of Labor and Management, University of Iowa:

"In considering the subject of employment practices, we used 1960 statistics. To try to get some understanding of the problems of the 318,000 working women in the State, we divided them into five major groups--public administration, education, hospitalization, retail trades, and manufacturing--to be investigated by the five subcommittees within topical areas.

"First of all, were women getting equal pay for equal work? Second, did women receive fringe benefits? And then, what was women's opportunity for employment and training?

"When we asked some questions about opportunities for employment, promotion, and training, we found that in no institution we approached was there a stated policy of discrimination against women. Usually we were told that promotion was based on ability, and not on sex. However, the implementation of this policy was left to the individual managers, and we found that the myths Mrs. Keyserling mentioned were indeed in operation.

"We found too that the conditions reported by the President's Commission for the Nation as a whole were true in Iowa as well.

"One of the women on the subcommittee was vice president of a banking firm. But there were very few women at the top level, and when we asked a manager why, we received in answer some of these myths, such as women are not preparing themselves; we want people with M.B.A. degrees (there are very few people with master's degrees in business administration). Mrs. Keyserling touched on that problem too. But as I said we did find there were many myths circulating about women: there is more absenteeism among women, they don't want supervisory jobs, they will not travel, they tend to quit, they automatically follow their husbands, and so on. Our recommendations are:

"First, distribution of facts to employers throughout the State to counter some of these myths.

"Second, that high school and university counselors be alerted to the fact that women are needed not only in the typical female occupations but also in the insurance, banking, and engineering areas.

"Third, we also recommended that more information about counseling services for women reentering the labor market be made available. Twenty-one of the local employment service offices have counseling services for both men and women, but women don't avail themselves of these counseling services on the whole. Why not? Information should be distributed throughout the State, on the radio and in the press to inform women.

"And finally, of course, we recommended that adaptation of the equal pay concept be stressed throughout the State of Iowa."

Mr. West announced that early in January 1965, his committee was going to review Iowa's protective labor laws with the new legislators in the State. He invited conference participants to attend and help discuss the questions of minimum wage, wage collection laws, and other measures.

MRS. ERMA B. PLAEHN, Professor, Political Science, State College of Iowa, and chairman of the Committee on State Labor Laws, said that her committee may have been too conservative in their recommendations.

The extent of the laws in Iowa having to do with labor would limit her to a very short report because the code was very short. She said she had dropped in on sessions of the Iowa General Assembly since 1929; and over the years she had reviewed the 1920-60

censuses, reapportionment debates, the economy, election results in the last 10 years, and was noticing a shift.

In 1960, according to the U.S. Bureau of the Census, 51,759 women in Iowa were in employment covered by the Federal Fair Labor Standards Act, and 256,559, or over two-thirds of the women employed in Iowa, were employed by industries not covered by this act. It is important to remember that a great number of these women are self-supporting or have families to support.

The committee recommended:

1. That legislation be enacted to require all employers to pay wages at regular intervals and to pay said wages in cash or certified check. That a worker separated from his employment, either of his own volition or by his employer, be paid wages due on the next regular payday. That a worker on strike be paid wages due him on the next regular payday. Also, that a provision be made authorizing the Labor Commissioner to take assignments of wage claims which he believes are valid and enforceable. Definite penalties should be instituted for any violations.

2. That a State minimum wage law be legislated to cover all employees not now covered by the Federal minimum wage and hour law; that the wage and hour standard be in line with the Federal wage and hour law with the inclusion of premium pay for time and one-half over 40 hours of work in any one week.

The committee recommended for further study:

1. That maternity protection for working women in both public and private employment be studied and appropriate legislative action be taken to assure women wage earners reasonable maternity leave without loss of reemployment or seniority rights.

2. That, since the State child labor law is dated and does not meet present working conditions, a survey of other State laws along with national standards be made, with a view to future legislative recommendations.

3. That industrial health and safety programs be developed and that legislation be prepared to implement these.

MRS. MARIAN L. JONES, chairman of the Committee on Legal Treatment, summarized the recommendations in the large areas her committee studied, which included women in public office, women's civil and political rights, and women's property rights and family relations.

"Women in public office: In most cases all constitutional and statutory provisions that at one time prohibited women from serving in public office have now virtually disappeared. According to the Merit System Council, 552 women and 547 men are employed in government

agencies in Iowa. The Department of Social Welfare accounts for over 70 percent of these women. In the professional and administrative departments of the State offices, there are only 11 women by comparison with 75 men. As you know, none of the top-level State offices, either elective or administrative, are held by women. Perhaps this is our own fault. Mr. West mentioned that women often don't seek different fields, and we know that the fields of law, the professions, and business often support their own elite for public office. Perhaps that is one reason that we in Iowa do not have as many women registered in public service in 1964 as in 1949. On the other hand, men have not been made adequately aware of women's abilities and their potentialities for leadership. It is up to us as women to let them know.

"I believe there still remains an element of prejudice that operates to exclude women from public opportunities for which they are clearly fitted. Again it is our job to combat it. Perhaps some of our own organizations are to blame--I mean State women's groups, political committees, and professional societies. We should have a channel set up so that we can make continuing arrangements for proposing qualified women for State public service. When appointments are to be made, does the Governor or other appointing official have a list of women who are qualified to fill those positions?

"Our participation in the work of the major political parties seems to be limited to the hard day-to-day work. We stuff envelopes and we ring doorbells. We hope that both parties will give women a voice in policymaking decisions because we feel that this would be a great forward step in achieving a goal of having more qualified women in public office.

"We recommended further study in this area focusing on urging (1) public officials to appoint qualified women to policymaking executive and administrative posts and to judicial offices and (2) State women's groups, professional societies, and other appropriate organizations to continue, but with greater emphasis, to propose qualified women for public service.

"Civil and political rights: Let us concern ourselves for a moment with domicile rights for women. Now, a person's domicile or legal residence is important because it determines many personal rights and obligations. We are concerned with the fact that under Iowa law the husband fixes the family domicile for all purposes. Common law is the law in Iowa. Thus married women who live apart from their husbands may be restricted in the exercise of their constitutional rights, such as voting and running for public office, jury service, obtaining welfare benefits, or being admitted to State institutions because of the lack of required domicile. We have recommended that this outdated law be revised to give married women the same right as married men to establish their own domicile.

"We found varying differences in the treatment of men and women in the field of correction--a very large field. To explore it, we sent to the sheriff of each of the 99 counties a questionnaire asking about facilities for the housing of women prisoners. Now, you know that any woman in the State of Iowa who is sentenced for any crime over 30 days must serve her time in the women's penitentiary. It isn't just, fair, or equitable that any woman should have the stigma of a penal sentence on her record when a man sentenced to the same amount of time serves his time in the county jail. In studying these questionnaires, we found conditions that were beyond belief. Our institutions are impeded in their programs of rehabilitation when they have to receive women prisoners who are sentenced to less than a year. We have recommended also that no woman be sent to the State penitentiary for a sentence of less than a year. We have also recommended that there be at least one woman member on the State parole board.

"In regard to equal rights there are two schools of thought about whether the 5th and 14th amendments to the Constitution afford women protection against discrimination in legal treatment. We have recommended, therefore, that the laws of Iowa be studied to be sure that equality of rights is neither denied nor abridged on account of sex.

"Then, in connection with legislative action, all laws regulating conditions of labor, including maximum daily and weekly hours, rest breaks, sanitary conditions, safety regulations, and insurance protection, should be studied and brought up to the national minimum standards. In conferring with my committee this morning, we felt it should be stated that these laws should apply equally to men and women. We want it perfectly clear that we are not asking for privileges only for women, because, as Mrs. Keyserling pointed out this morning, they must apply equally to men and women.

"We believe that women doing the same work as men--with other qualifications being equal--should be paid the same wages as men; hence, the recommendation of equal pay for equal work."

MRS. MARGARET K. YODER, Supervisor of Home Economics, Iowa State University, and chairman of the Committee on New and Expanded Services for Women: "Our committee has studied the new and expanded services needed by the women of this State in order to carry out their functions and roles.

"The report of the Home and Community Committee of the President's Commission says that many women can make choices freely only if certain services are available and certain policies are in existence to assist them in strengthening family life. Our committee looked at the average Iowa family and realized that in the changing social and economic scene there are many needs for expanded services. Such factors as population growth, reorientation of our community institutions, influence of television, worldwide tensions, developing industrialization and automation, urbanization and suburbanization, the increasing number of elderly people, shorter workweek, working mothers, commuting fathers, and mobile families--all affect the kind and quality of living to be attained by the people of the State, and affect the type of public services necessary to assist the family in fulfilling its functions adequately.

"Our committee was interested in women as homemakers, community workers, employed workers, and I might say, as individuals. And we discussed the following services--homemaker, household, child care, mobile homemaker, mental health, and consumer.

"There is necessity for some kind of in-the-home service which can prevent the breakdown of families. Such situations as young families far away from support of their own families, the marriage of many young people who are emotionally immature and not ready for it, the 11.9 percent of our population 65 years of age and over with their increasing incidence of chronic disease, and the growing welfare load, which in many cases involves inadequate homemakers, have made the need evident.

"Pilot projects in homemaker services exist in the State in some of our major cities, including Des Moines, Burlington, Sioux City, and Davenport. Efforts are being made on the basis of special grants to get these organized in Centerville and Cedar Rapids.

"In Sioux City, seven women, two of them Aid to Dependent Children (ADC) recipients, were trained for this service. They received $1.25 per hour, paid by the recipient, if able, or by a special grant from the Department of Health, Education, and Welfare for city welfare. This project served 51 families and saved $1,437.30 over the cost of nursing home, hospital, and foster care during its first 6 months in operation. One of the ADC mothers who had been trained went off the relief rolls. I suspect other figures would support this type of ultimate saving where the service was used. One of the grave difficulties facing the State is that these projects are at present being financed by special grants. What will happen when these grants run out? What provision can be made by the State to carry on, so that the Homemaker Service can be expanded and thus be made more available to more people of the State? Our commission has recommended that a State Homemaker Service Council be appointed to study some of these problems, to set up standards for comparison, and to serve as a clearinghouse of information and experience.

"The next thing considered was Household Services. Since many women work, there is more and more need for services within the household. We made a small survey of some working women and found they were not utilizing many services partly because services were unavailable and partly because they couldn't afford them. Among services needed were ironing, cleaning, and mending. Also mentioned were such services desired as help with preparation of the evening meal, more chance to have their hair done at the beauty parlor, better facilities for the care of children, dressmaking, and later closing hours of the stores to afford more opportunity for shopping. One woman even suggested a weekly or monthly bulletin of suggested menus.

"How to provide these is really something we must study. We need to investigate this as an area of opportunity for women who want to work and who do not have training. We need to help provide training for women who cannot now do these things. And there is the question of how to give the job more dignity and prestige--certainly an important element of why a person does or does not want the job. It seems this is a fertile field for individual business enterprise, and perhaps in some way we should make people aware of this possibility.

"One other area of study was that of child care. Because many more mothers are now in the labor force, child care seems to be a need. In 1960, 22 percent of the employed women in this State had children under 6 years of age, and certain current surveys point to an increase in the need for child care. The pattern seems to be very varied. Many have no choice but to leave children with friends, relatives, or paid babysitters, and many times this is just custodial care; sometimes in situations harmful to the children involved. Since 1954 we have had standards for group care of young children and licensing administered under the State Department of Social Welfare. These standards are not covering Iowa's needs for the following reason: They do not apply to children under 2 years of age or over 6. The State personnel for maintaining licensing and inspection is insufficient in number to encompass the needed activities. The standards themselves, when formulated, were at a minimum level and now, 10 years later, are to some extent outdated as well as in need of revision upward to reflect the significance of the child's development.

"Currently there are 99 licensed group day care centers for children of preschool age. This number does not approximate the number actually in operation. Nine of the licensed groups are community sponsored. Most of them are operated privately for profit, although

there are some centers sponsored by organizations such as churches and family services. There are very few "extended day care" centers for children, that is, for out-of-school hours of school-age children. In the national picture, there is a growing concern for the development of opportunities for these preschool children. Then, also, a variety of programs are being initiated for young children so "deprived" in environmental opportunity as to be unequipped to compete when old enough for school.

"We have talked about working mothers. There are also mothers upon whom special demands are made by their exceptional, retarded, or handicapped children. There is also the child in times of crisis in a family when just a day or two of care is needed.

"We also have mobile homemakers in the State, many who change locations fairly often. For them it is quite a chore to go into a new community, find out what the facilities are, and learn to use them rapidly. We need to think through the problem of what can be made available to help families in this situation. Other mobile families are families of migrant workers who come into the State. A good job is being done in Muscatine through its migrant council to provide educational opportunities and other community services. We need to study the laws that affect migrants in relation to their housing facilities, health, and sanitation.

"Mental health: There is much need for research into factors affecting the mental health of women. The facilities in our State, while they are being improved right along, still need to increase before we have adequate personnel and family counseling available.

"Services for the consumer: As the homemaker is the primary buying agent of the family, she feels great responsibility for getting her money's worth from the money she spends. Our State laws ought to be looked at. The uniform small loan law is old and does not cover installment buying, except for automobiles, and it does not cover charge accounts. Everything dealing with sales and loan contracts is scattered throughout the contract law and is not available in one place. Our committee has recommended that an Iowa council for the consumer, to parallel the President's council for the consumer, be appointed by the Governor to serve as a sounding board for consumer problems, and work with State agencies and other interested groups."

DR. ELIZABETH S. WHITE, Dean of Women, Morningside College, and chairman of the Committee on Educational Needs of Women, was then introduced as the next speaker.

"Because education is such a broad topic, the subcommittee on education was forced to be selective in the areas of its focus. Our approach was by way of the four themes that Dr. Scruggs mentioned to you last night--women as individuals, as family members, as employed workers, and as citizens and community workers. These same four themes were developed in the leadership conference which we cosponsored with the continuing education committee of the College of Home Economics at Iowa State University on May 18, 1964. Since it was impossible for our committee members, who live clear across the State from each other, to get together many times, we divided the areas of study among our various

members. We realized--just as I am sure every group did--that there is much unused material yet to be digested and used.

"One of the startling facts we noted was that in 1960 the level of education--median number of school years completed by women 25 years of age and over--ranged from a low of 8.9 years to a high of 12.5 years in some counties. Although we are very proud of our literacy rate in Iowa, this is not really a very strong picture. The dropout has been studied quite thoroughly, and we have recommended continuing the study at all levels--elementary through college. We have noted that one in every five students finishing the eighth grade fails to complete high school, and a study in 1960 showed that about 15 percent of the Iowa population 14 to 24 years of age were high school or elementary dropouts. If we take out the ineligibles, we find there would still be 15 percent--a low estimate probably--and Iowa is losing at least 15 percent who, by every standard set up for judging it, ought to be continuing their education.

"As noted by the Education Committee of the President's Commission, 'The high motivation found in early school years often fades into a loss of commitment and interest, other than in the prospect of early marriage.'

"Our first recommendation is that efforts be extended to create an awareness in the women of Iowa of their need for education and of the satisfaction inherent in education. We are not concerned here just with the satisfaction and needs which have to do with employment, but with the greater enrichment to their personal lives and in their development of the finer appreciations and values that come through education. I think we might hope that what has happened to the President's Commission report might happen to our report--that we would see young women on our college campuses carrying the report and saying they were using it in their discussion groups and looking at it in their sociology classes. We have suggested that, to create this awareness, women must become acquainted with the educational opportunities that are theirs now in our public and private educational institutions; that many should be alerted to the present situation in scholarships and financial assistance increasingly available to them to educate themselves through the National Defense Education Act and other means; and that somehow through the media open to us, we must extend this information and knowledge. And we further suggest that we encourage our women to take a fresh look at the opportunities of education existing in different areas of adult education, especially since we hear again and again that fine programs are set up for adult education to which there is a meager and discouraging response.

"The ratio of women in colleges, that is, the ratio of women to men in colleges, is low. A study of the U.S. Department of Health, Education, and Welfare points out that in 1963 there were 23,385 women in Iowa colleges as compared with 36,349 men. The report showed that 1,202 Iowa women and 3,380 men pursued some type of advanced degree beyond the A.B.

"I conducted a survey with the deans of all 4-year colleges in Iowa asking them what seemed to them to be the greatest needs of Iowa women. They put considerable emphasis upon this matter of arousing in women knowledge of the need for education and somehow keeping this knowledge there so that their early interest would not fade.

"Our second recommendation is that opportunities for mature women to continue education beyond high school be greatly expanded and adapted to their needs. This is related closely to the adult education program--an important opportunity for Iowa women.

"The third recommendation suggests such ways of implementing the adult program just mentioned as: adult education programs in the schools, cooperative extension service, volunteer agencies of education, extension correspondence courses, educational television, art centers and libraries, and national and local women's clubs.

"Our fourth recommendation is that more Iowa women, who are or hope to be gainfully employed, should be encouraged to achieve an education that would fit them for today's employment, because as we heard this morning, not fewer, but more women will enter the labor field each year. Discriminatory barriers against women in various areas are falling. Women need to be made aware of this fact, perhaps by being informed of the counseling services now available to them in relation to vocational and educational opportunities. More women should be led to use counseling services to obtain vocational education and pursue opportunities made possible by the 1963 Vocational Education Act.

"And fifth, we recommend support and expansion of educational programs offered to prepare women of all ages, educational levels, and cultural backgrounds to fulfill their responsibilities for homemaking and family life."

A number of areas for further study also were pointed out.

LUNCHEON SESSION

The luncheon session of the Governor's Commission on the Status of Women was called to order in the Terrace Room, Hotel Savery, by the chairman, MISS NORMA J. BRUNER, Woman Inspector, Iowa Bureau of Labor.

Miss Bruner introduced the speaker, Miss Marguerite Gilmore, Chicago Regional Director of the Women's Bureau, U.S. Department of Labor, and said she would report on the activities of Governors' Commissions on the Status of Women in the Midwest.

MISS GILMORE first read a telegram from Kansas announcing the establishment of a brandnew commission there--the 34th one to be appointed. She then read greetings from the chairmen of each of the Midwest regional commissions. (It had been hoped originally that they could have been present in person.) Following that, Miss Gilmore reported briefly on the concerns and accomplishments of the commissions in the nearby States.

"Here in your own State of Iowa you first had a council on the status of women which grew from a statewide conference held in Iowa City in 1963. This council asked the Governor to appoint a commission and he, in turn, asked the council to prepare a list of qualified men and women to serve on the commission. So you have two groups here actually, one a lay group particularly interested in promoting legislation affecting the education and employment of women, and one officially appointed commission with responsibility to make recommendations to the Governor in the areas he outlined in his charge.

"Michigan was the first State to have a commission--back in August of 1962 even before the President's Commission had made its formal recommendation that State commissions were needed to supplement the national one. Here again there is a council as well, self-formed and with a representative cross section of membership. At this time they are working specifically to extend coverage of the equal pay amendment and to establish minimum wage legislation.

"Michigan has a special problem area, the whole Upper Peninsula, listed as an economically distressed area. Motivation for training is lacking there, and a general feeling of discouragement--especially among the women--is evident. The commission has taken on

the Upper Peninsula as a special problem to work on with local groups to try to find at least partial answers.

"The Minnesota commission also grew from a council, which in turn grew from a statewide conference on the status of women. Both the council and the commission are very active. The commission's interim report to Governor Rolvaag sounds something like yours. They are concerned also about educational opportunities, equal pay, and day care. It was interesting to note that the survey of public and private day care facilities was headed by a team of two men--one a pediatrician and the other a State senator.

"Inequities in salary and tenure between men and women teachers have been one of the major concerns of the Minnesota commission. For example, in certain communities women teachers who get married during a school year are considered to have broken their contract, while men, hired under exactly the same contract, are not penalized. Also, a commission survey of five State colleges showed serious inequities between men and women on length of time between promotions, amount of salary increases, and total pay.

"The Minnesota commission also has been concerned about standards for household employees and has produced a little 'Code for Household Employment' outlining suggested relationships between employers and employees, type of duties, working conditions, and coverage by social security. This is a fine step in the direction of giving the occupation more status and dignity.

"Wisconsin established its commission a little later than some of its neighbors but it laid excellent groundwork. A small group met with the Governor, asked him to call a statewide conference in order to bring local leadership to the fore, and then worked with him to appoint a representative commission. This commission plans to work toward bringing more women into positions of public office--at present there is only one woman in the legislature--and to study the situation of women under State civil service. This commission will be cooperating with the Michigan commission in working on the special problems of unemployment in the area where the Upper Peninsula of Michigan and the boundary of Wisconsin come together.

"Illinois also has a council that played an important part in winning approval for a commission. There is a basic difference in form, however, since the Illinois commission was set up by the legislature rather than the Governor. Also, it has a $10,000 appropriation for the biennium. This means it can hire a 2-day-a-week secretary and pay travel expenses for its members.

"The passage of the bill to establish the commission was rather interesting because it was done at the same session where the long-worked-for minimum wage bill and the equal pay bill were roundly defeated. I'm not sure the legislators knew that the commission was going to come up with its major recommendations for minimum wage and equal pay bills, and that part of the $10,000 would be used toward gaining those very same objectives.

"The Illinois commission has also been working hard to make more scholarships available to women, especially on a nonresidential or part-time basis. A number of hearings have been held around the State to get local expressions on this and other areas of concern.

"Illinois, as well as Michigan and Minnesota, has recommended some type of State council or State officer for the education and protection of consumers.

"Indiana has problems somewhat similar to Iowa's, since it has become industrialized more recently and lacks any basic labor standards legislation. That commission is presenting its interim report to the Governor on December 5 and is asking for minimum wage, equal pay, and wage claims legislation. It is also concerned with the need for a very considerable expansion in day care facilities.

"North and South Dakota both have active commissions, quite different from each other in their organization and approach. The North Dakota commission was born in a blizzard, but on that day 12 of its 13 members came in from all parts of the State. This group worked very hard and very well together on the educational and labor legislation fronts especially, carrying on surveys without benefit of a budget. The Governor stayed in close touch with the commission and gave it much encouragement. The members of this commission were persons experienced in their fields, for example, the State president of the AFL-CIO, the district manager of Northwest Bell Telephone, and the chairman of the board of higher education.

"In South Dakota the commission's history was a little different. The commission assumed a real place in the State structure after a slow start during which the first-named chairman had a serious illness and, at the request of the Governor, the vice chairman stepped into that position. Even a change in the governorship did not change the support from that office. In this State the status of Indians both on and off the three large reservations is of great concern, with the rate of school dropout extremely high and jobs hard to get. So this commission hopes, as one of its areas of emphasis, to improve the status of Indians, especially that of Indian women. In addition, this commission wants to get an enabling act passed so that the State can make use of Federal day care funds. It wants also to raise the minimum wage rate, pass an equal pay act, and increase its vocational education facilities.

"These are some of the things happening among your Midwest neighbors. I wish you could know some of the people in these other States. Most of them are doing this work in addition to full-time jobs and without even expenses being paid. They are discovering, as you are, problems--and resources--in their State and community which are new--sometimes startling, sometimes reassuring--and are meeting and working closely with other commission members representing a much wider variety of background than they have known before.

"When I look at the big map on my office wall now, I no longer see just a flat space. I see little bumps and bubbles where groups of people I have met and talked with are doing all kinds of things. Channels are forming from State to State as well as between the States and Washington, and we can already see the beginning of a movement that will make a great difference in this country. As Governor Rolvaag said when speaking of the fine accomplishments of his Minnesota commission, 'This State won't ever be the same again.' So also will the Nation feel the lasting impact of the work of these commissions."

AFTERNOON SESSION

Following a discussion group period, there was a general session at which the chairman, Dr. Marguerite Scruggs, summarized the preceding activities and then called on two people, not members of the commission, to speak as individuals with varying backgrounds of experience and preparation to give suggestions or reactions in regard to implementing the commission report.

DR. HELEN R. LEBARON, Dean of the College of Home Economics at Iowa State University, spoke: "I have listened to the reports and the discussion of last evening and today, and I classify some of the suggestions as having to do with the laws of Iowa. Another group has to do with education, and a third group, with research. And I would like to discuss some of these aspects of the work of the commission from three standpoints.

"Governor Hughes last night said he was appreciative of having this report in time for it to be useful to the legislature which will convene early in January. I found about 12 different recommendations concerning laws in the report. Now, what happens to these? The Governor is popular, certainly. He was reelected with an overwhelming vote, and he apparently has control of the legislature, but I don't believe he can put through these laws. He may not, of course, agree with them either. Who is going to be responsible for lobbying in favor of some of the laws we think important? How will that be done? I wonder whether, if we just get started in 1965, we might expect some results by 1967? What is the role of organizations represented here in doing something about implementing these laws?

"Then as I look at education, I find some things to examine. For example we have an education job to do concerning the status of women in Iowa. I don't think men know what it is, and I don't think very many women know what it is either. So one of our jobs is just to educate people concerning the situation and to find ways to make this report available to folks throughout the State. Another education job is that of providing educational opportunities for these women. This morning's paper carried an article saying that the Board of Regents was cooperating with the Department of Public Instruction and other groups urging that we have vocational technical opportunities in various areas of the State. There are some opportunities for women in these facilities that might well be ideal.

"There is a great deal of interest in continuing education, in providing opportunities for women in the universities, schools, and our local school districts. How are we going to provide opportunities for women who have dropped out of high school to get a high school diploma? Another was this matter of making it possible for women to go to universities and colleges part time, on and off for a number of years, to get a degree. This might be fairly easy in a city like New York City or Philadelphia, in California, or even in Minneapolis, but what do you do if you are in a State like Iowa, where the colleges are scattered in rural areas.

"Another question has to do with the counseling of women. Again and again this was brought out. I think they need counseling about education as much as about jobs. I wonder what job opportunities are available? what educational opportunities?

"And then there is the question of research. You might call this investigation, if you like that word better. The report calls it further study. I don't care what word you use, but we have to get more information. Some of it we can get by reading and by asking questions. Some of it will have to be formalized, and some will have to be derived by sophisticated techniques using our statisticians. We have to know about the attitude of employers toward women workers. What is it in Iowa? We have a little notion, but we need to find out exactly what it is. It has been suggested that we need to know more about the status of part-time employees, particularly women part-time employees. And then we need to know something about the attitudes of women themselves toward work. This is fundamental research that might well be undertaken by one of our State universities or perhaps all three of them in cooperation to find out how women feel about work. Some, I am sure, feel that part of the problem we have concerning the status of women is due to the fact that women have a low level of aspiration in terms of education and employment and in terms of taking responsibilities. We just guess about these things. We need to know the facts. This is the task, as I see it, of changing the laws of Iowa by working through education to get better opportunities for women, and then by getting more information through research or investigation.

"And then I looked at it in another way. It seems to me this material could also be viewed from the standpoint of tasks for different segments of our population. Certainly, the commission has a job to do in the next year, the year after that, and in the year after that also. But there are some tasks that properly fall to organized groups that may be represented here, tasks that can be done best by the organized groups of Iowa. Much of this information can become part of the program material of various organizations. We can implement the proposals to educate the people of Iowa by incorporating much of it in the programs of organizations we represent, whether church organizations--if they are women's action groups--study organizations, or whatever they are. And then our organizations, after they really know what they think and have studied it thoroughly, can pass resolutions, and those resolutions can be transferred or transmitted to the people in our State legislature and our Governor's office, and then these same organizations can take it upon themselves to inform the public through reports. They should take to heart the suggestion that they seriously consider identifying able women who might be considered for public office in the State of Iowa, transmit their names to the proper authorities, such as people in the State House and the various parties that are searching for personnel. These are just a few jobs I think organizations can assume.

"I think that the universities and colleges here represented can find some tasks for themselves, also. Certainly, they can hold conferences dealing with segments of the problem. Two have been cited: one at the University of Iowa and one at Iowa State University. These are just the beginnings. There are other kinds of conferences that the colleges and universities can sponsor, and they can highlight the problems, study them further, and make more information available to the public. They can carefully and critically look at some of the suggestions for research and find ways to secure funds to investigate some of these problems.

"And then I think there are some tasks for you and me, as individuals. Dr. Scruggs said I was talking as an individual. Mrs. Myers will be talking as an individual, too, and each one of you is an individual. You may be representing a group, but you also are a person, and there are lots of things I can find for those of us who are individuals. I think one thing we as individuals can do is to find out what the situation is in our own community and our own county. For example, I am going to find out about the provisions for women in the Story County Jail. It had never occurred to me, until I read and heard the report this morning, to wonder about the situation. I think each of us can find out what the situation is concerning

the rights of women and provisions for women--whether they are given equal pay and equal opportunity. And if I find some things that need to be changed, I can write letters to the newspapers, and tell other people about them. I can incorporate them in speeches I make. I think we, as individuals, can help to improve the status of women."

MRS. ALICE M. V. MYERS, Executive Director of the Y.W.C.A. in Des Moines, with a background of experience in the public schools, in adult education, and in private agencies: "I had the opportunity to read these reports several days ago, but I find I am still digesting them.

"How many of us really understand the changing social scene in which we are today? How many of us actually feel the impact of change and feel we are participating in it? I have felt that this point of view, this concept, is important. I think that as women we are at times extremely conservative. I think when we once get going, we really can do something about it. I feel that here in our State we have hung back a little in the last few years from actually moving out to bring about social change. I think one thing needed here in Iowa--and maybe Iowa is not unique in this matter--is the arousing of women to what is actually going on, in a most revolutionary time, and helping them to understand that in their own life investment they can have an experience far beyond anything they have had previously.

"Another question that came to mind was how well acquainted are we with actual groups of women? You know, it is so easy to categorize human beings, tag them, and group them without very much association with them. I wondered, as each of us heard and read these reports, how have we come alive as human beings. I think this is something that has to come before change really is very effective. How many of us really know women in the lower economic brackets? How many of us see them, talk to them, have them as friends, have a real feeling of understanding of what their lives are? I believe that many times, as women, we are expected to live rather sheltered lives and sometimes do. Those of us who work in jobs where we are in contact with these folk perhaps have a little different kind of experience. There are some of us who do not, whose life paths really cross just a routine group of people, and that is about as far as we go. I am sure if we got to know some of the school dropouts in the lower economic groups, if we got to know Aid to Dependent Children recipients, that perhaps there would be parts of this report, if not a number of parts, that would come alive to us, terrifically.

"I wonder too how many of us actually know the problems of women in minority groups? This did seem to me to be quite an omission. Perhaps it is not always good to point that out, but it has been my own experience and that of the agency with which I work that many times we do not realize what it means to be in a minority group, and especially in a racial group; and therefore, we cannot all apply things said here in exactly the same way. It isn't that they are people that are so very, very different. Basically, they are God's children too, and they come with the same spiritual, mental, and physical equipment as all of us have, but society has set about making life quite different for them. And so to look at some of the areas of concern in these reports calls for persons with a special kind of understanding, empathy, and approach.

"I also have felt strengthened by the realization that we had women looking into women's problems, women's opportunities, and women's potentialities for growth and development. This doesn't mean men are left out of this picture by any means. But we are working in the area of relationships, and I believe that women can help women much better in this area than perhaps men can. I believe we need to think in terms of how we can help women grow in these respects, and we need to look at women's attitudes. In one group today in an informal situation it was mentioned that women will oftentimes be the least sympathetic toward other women, which seems strange. Maybe this is due to some of our basic insecurities in that we do not feel secure enough as persons ourselves, to move out to help other women in whatever may be our groupings. Thus, we ought to consider within our groups and our organizations--perhaps it is something to which the commission should give thought--how we can help women at the adult level to feel secure enough that they can move out among women and change their attitudes; that women, as a group, can have the strength to pull the entire group of women along the lines our report indicates here. Certainly firsthand experience, such as visiting the county jail, will help to overcome some of the feelings we have. Maybe as women we draw into a shell to avoid such experiences.

"I recall hearing Judge Harrison talk in our community a couple of years ago about alcoholism and what was done with people who were highly intoxicated, and he described what they do for the men. They are given a bath, clean clothes, a place to sleep for the night, breakfast the next morning, and sometimes even a spiritual experience before they leave, and some counseling. So in the refreshment period following, I said, 'Ray, where are the women taken?' He said, 'They are taken to the county jail.' And I said, 'What would they have that would help them to go out a different person from when they came there?' He said, 'There is nothing--the same clothes and the food that is served in the jail.' I know in Cook County, as some of the folks with whom I work who are in the audience know, it has been one of my deep desires to have enough women in this community know what the situation is so that they are not afraid to go, that they do not feel contaminated because they have gone, but that instead consider they have reached out and taken the Hand of God and said, 'This is Your will that all of Your children reach a peak of living that is good and right and I have had Your hand when I went.' I believe that, if we can take a spiritual view, we need have no fear, and we need have no feeling but that we have elevated ourselves really when we have gone to some of these places. I don't know whether I am making myself clear, but I think this is one of the hurdles we have to face to encourage women actually to do things for other women in this whole matter of implementation.

"I too have been interested in what we are going to do when this conference is over. How is this going to get going? We talked legislation. We talked about commissions and we talked about councils, but this thing needs to get out to the grassroots. Could the commission set up teams to go out and give the interpretation gained here? How can we work with organized women's groups? There is a tremendous structure of many women's organizations within our State. Could the commission have a meeting with the State officers and leaders of these organizations? Could they work from the standpoint of working with these groups as they are setting up their program planning so that it filters down to the grassroots? Could we have a pilot project in a given community that would help us to see how you really get this thing across?

"I can see that 56-year-old building of ours as being the focal point--a nucleus for some of the women's organizations in this community. I am going to talk to some people here, but I believe we can do a 'dry run' of interpreting this organization. I would like to see some of the professional women's organizations, the women who are attorneys, banking women, insurance women, who would be helpful in giving information and disseminating it. I would like to see the social agencies brought into this. I felt that in the reports there was

lack of involvement of social agencies. And I believe that while we had a great deal of the academic--and I wouldn't say that the academic institutions that were involved do not have practical application, they certainly do--the social agencies could do much in the further application of what we are doing here. I believe we need to have catalytic agencies that can help to bring in a greater quantity of the community's resources, because the whole community can come in at some angle on many things discussed here."

The chairman, Dr. Scruggs, thanked the two speakers for their most helpful and constructive suggestions and reactions and continued, "Those of us on the commission appreciate their picture of the involvement of individuals, various kinds of groups and organizations, universities, as well as the commission, because the commission can accomplish much but does have its limitations. The commission can serve as a catalytic agent, perhaps as a means of focusing attention, focusing study, and encouraging action in regard to various recommendations made.

"The commission, we hope, will be a stimulatory agent, but the commission itself is limited in many ways, as the Governor's commission, to making recommendations to a Governor. Certain kinds of information, encouragement to legislators, and so on, might be appropriate on the part of the commission, but certainly would not be inappropriate on the part of individuals or organizations.

"Our plan is incomplete, but I believe there is a plan to provide a copy of this report for each of the legislators and to have distribution beyond this. In addition, after putting our heads together, several of the officers who were available and looked at the financial resources felt that this recommendation is sound and was our decision. These reports will be available now after this meeting for 50 cents each if you wish additional copies to use with various individuals or to present to individuals, groups, or organizations. Then there will be a free distribution to the legislators and to other individuals yet to be identified.

"I am quite confident I speak for the commission in saying that we want your suggestions on what the commission might do or might consider that would be helpful. As individuals and within your various groups and organizations, we know you are going to think through what needs to be done and do what you think is best. In this you do not need to be held accountable to the commission. One reason for making this report available is to have in your hands the information so far collected. Will you feel free to offer your help, give suggestions, and contact any officers of the commission? If you lose our address, just address the Governor's Commission on the Status of Women in the Governor's office. They will see that we get this information.

"I want to thank each and every one of you--certainly all of the commission members, committee members--all of you who have participated today. There are many individuals who should be thanked more profusely than this, but I believe that we are all grateful for what has been done to make this meeting possible and to provide so much for our further work."

After the benediction given by Mrs. Dwight Krumboltz, a member of the commission, the general session stood adjourned.

MEMBERS OF THE COMMISSION AND THE COMMITTEES

COMMISSION OFFICERS

Chairman: Dr. Marguerite Scruggs
Vice Chairman: Mr. George W. Moore
Secretary: Mrs. Betty M. Talkington
Executive Secretary: Miss Norma J. Bruner

EMPLOYMENT PRACTICES COMMITTEE

Mr. Jude P. West, Iowa City, Chairman
Mrs. Barbara Calderon, Iowa City
Mrs. Frederick Epstein, Davenport
Mr. George W. Moore, Des Moines
Prof. Pearl Zemlicka, Iowa City

Mrs. Earl M. Boulton, Iowa City
Mr. Robert H. Caldwell, Cedar Rapids
Mrs. Marjorie J. Cunningham, Des Moines
Miss Phyllis Franck, Clinton
Mr. Robert Hickle, Waverly
Miss Elizabeth Hutchins, Iowa City
Mrs. Marjorie Leonard, Keokuk
Miss Esther Smull, Perry
Mrs. Carl Sokolof, Des Moines
Mrs. Harland Soper, Sioux City
Miss Marie Van Gilst, Newton
Mrs. Willis Vanderburg, Shell Rock

STATE LABOR LAWS COMMITTEE

Prof. Erma B. Plaehn, Cedar Falls, Chairman
Miss Norma J. Bruner, Des Moines
Mrs. Robert Crooks, Atlantic
Mrs. Mary Faith Hart, Muscatine
Sen. Jake B. Mincks, Ottumwa

Mrs. Forrest Binger, Cedar Rapids
Mrs. Robert D. Heyer, Boone
Mrs. Hubert E. James, Des Moines
Mrs. Eleanor Kapfer, Des Moines

LEGAL TREATMENT COMMITTEE

Mrs. Marian L. Jones, Malvern, Chairman
Mrs. Dwight Krumboltz, Cedar Rapids
Miss Lorene Harrington, Cedar Rapids
Mrs. Clara Liebold, Wilton Junction
Mrs. Betty M. Talkington, Cedar Rapids

Mrs. Floyd Dittmer, Strawberry Point
Mrs. K. P. Ferrell, Bettendorf
Mrs. Raymond Klass, Cedar Rapids
Mrs. Wayne McKee, Indianola
Mrs. L. H. Myers, Des Moines
Mr. W. D. Schnirring, Burlington

NEW AND EXPANDED SERVICES COMMITTEE

Mrs. Margaret K. Yoder, Ames, Chairman
Dr. Ruth Updegraff, Iowa City
Mrs. Patricia Duckworth, Council Bluffs
Mrs. Charles P. Miller, Burlington
Miss Percie Van Alstine, Gilmore City

Dr. Ercel Eppright, Ames
Miss Helen M. Newell, Iowa City
Miss Margaret Sjolander, Cedar Falls

EDUCATIONAL NEEDS OF WOMEN COMMITTEE

Dr. Elizabeth S. White, Sioux City, Chairman
Mrs. Irma Rensberger, Davenport
Mrs. Saul Suvalsky, Council Bluffs
Mrs. Luella Reese, Turin
Dr. Marguerite Scruggs, Ames

Mrs. Austin Getz, Ames
Mrs. Vera Herweg, Carroll
Mrs. Jack F. Padgett, Indianola

*ARROWHEAD REGIONAL CONFERENCE ON THE STATUS OF WOMEN IN NORTHERN MINNESOTA, DULUTH, MINNESOTA, JULY 17, 1964

A conference conducted under the joint sponsorship of the Arrowhead Council on the Status of Women, the Minnesota Governor's Commission on the Status of Women, and the Women's Bureau, U.S. Department of Labor met to consider the needs and problems of Northern Minnesota working women. Panel discussions, workshops and speeches were all planned so that conference participants would receive current information about the needs of the labor force, particularly females, could assess legislation affecting wages, hours, and similar areas of concern, and could consider how to work towards solving the problems presented. Presentations were: (1) "The Economic Situation of Northern Minnesota," (2) "Developing Our Economic Potential," (3) "Profile of Women Workers in Northern Minnesota," (4) "State Laws Affecting Women Workers in Minnesota," (5) "Federal Laws Affecting Women Workers in Minnesota," (6) "An Employer Looks at Women Workers," and (7) "Organized Labor Looks at Women Workers". Summaries are included of workshops on employment of women, education of women, home and community, and the legal and civil problems of women. Addresses by James Rice on "The Purpose and History of the Governor's Commission on the Status of Women," and by Mary Dublin Keyserling, the principal speaker at the conference, and lists of resource specialists, conference committees, and participating organizations are included. FOREWORD

This report provides a summary of the proceedings of the Arrowhead Regional Conference on the Status of Women which was called under the joint sponsorship of the Arrowhead Council on the Status of Women; the Minnesota Governor's Commission on the Status of Women; and the Women's Bureau, U.S. Department of Labor. Many State agencies, community organizations, educational institutions, and labor groups cooperated to give the conference scope and meaning.

This conference was one of a series of State and regional meetings held for the benefit of individuals and groups who are concerned with the needs and problems of working women. Panel discussions, workshops, and speeches were all planned so that conference participants would receive current information about the needs of the labor force--particularly the female labor force; could assess legislation affecting wages, hours, and similar areas of concern; and could consider how to work toward solving the problems presented. The meeting summarized in this report concentrated on the needs of Northern Minnesota.

We are eager to acknowledge the efforts of the many individuals who helped plan the conference, particularly Mrs. Viola Hymes, Chairman of the Governor's Commission on the Status of Women, and Miss Ruby E. Horn, Chairman of the Arrowhead Council on the Status of Women. The many speakers who represented both State agencies and community enterprises gave generously of their time and thought and contributed to the stimulating and constructive atmosphere that prevailed.

There emerged from this meeting not only a comprehensive picture of the needs of working women in Northern Minnesota but an understanding that the needs of these women must be seen against the background of the needs of the community as a whole. This understanding, combined with the obvious interest and devotion of those who are working to solve the problems of women and of the community, makes us confident of the successful outcome of future plans and action.

Mary Dublin Keyserling

CONFERENCE OBJECTIVES

To place before the conferees the latest information available on women workers in the State of Minnesota.

To investigate the needs of our Nation which can be met through the untapped resources of womanpower, and to encourage women to assume their role as full citizens of their State and Nation.

To analyze the dual role of women as homemakers and wage earners in their contribution toward family responsibilities.

To review and assess the present status of women workers as reflected in legislation and practices on minimum wages, hours of work, equal pay, and working conditions.

To recognize and make plans for children of working mothers. To develop guides for the roles that State and local organizations can play in meeting the needs of women workers.

GREETINGS FROM THE GOVERNOR

It is a personal pleasure to send my greeting to the participants in the Conference on the Status of Women in Northeastern Minnesota. I am pleased that the sponsoring groups have centered on this area of our State to emphasize its present and future and the role of women therein.

I regret that my schedule does not permit me to attend, for I would have appreciated the opportunity to meet with you and hear the excellent speakers on your program. I extend my best wishes for fruitful discussions and a productive conference.

Sincerely yours,

KARL F. ROLVAAG
Governor

SUMMARY OF CONFERENCE PROCEEDINGS

OPENING SESSION

The opening session was called to order by Miss Ruby E. Horn, Chairman, Arrowhead Council on the Status of Women. She introduced the Honorable George D. Johnson, Mayor of Duluth, who welcomed the conference to the city and wished it success. He remarked that, as he understood it, in recent times our society had made a significant change in its reasons for hiring workers. Before 1945 or 1946, he said, most workers were hired for their brawn--their ability to pick something up and move it around, but since then, more and more, the chief reason for hiring people has been their brain. The increased emphasis on hiring brainpower and education tends to open more doors for the so-called weaker sex, and he feels it is well to consider some of the ramifications of this.

Mayor Johnson commented on another matter--one that was of vital concern to the Northern Minnesota area with which the conference dealt. "People in the southern part of the State," he said, "do not realize that the Taconite Amendment is also of the utmost importance to them.... Our natural ore tax revenues are gone, never to return. The only way they can be replaced is by the passage of this measure."

Miss Horn traced the origin of the Arrowhead Council on the Status of Women, one of the three groups which sponsored the meeting. This council came into being because a statewide council, set up after 1963 conference at the University of Minnesota in Minneapolis to explore the status of women, felt there was need for more grassroots opinion and discussion. The Arrowhead Council in Northern Minnesota was the first local council organized.

After expressing Governor Karl F. Rolvaag's regret that he was not able to attend the meeting, Miss Horn introduced Miss Marguerite I. Gilmore, Midwest Regional Director of the Women's Bureau, U.S. Department of Labor, who presided during the panel discussion that followed.

PANEL DISCUSSION

The panel discussion was planned to provide conference participants with a common understanding of the particular areas of interest so that group discussion in the afternoon workshops would be more fruitful. Seven panelists addressed the group. Excerpts from their remarks follow. Miss Marguerite I. Gilmore was moderator.

THE ECONOMIC SITUATION OF NORTHERN MINNESOTA

Mr. Jerry Pratt

Director of Community Relations
Upper Midwest Council for Research and Development
Minneapolis, Minn.

Five years ago a group of leaders in the Ninth Federal Reserve District of North Dakota, Minnesota, Western Wisconsin, and the Upper Michigan area discussed some of the problems confronting our area. At that time we had an employment lag in agriculture, mining, oil, and other industries. We had a shift in population from rural to urban communities. (It is hard to realize, but, in this upper Midwest area, 5 million of the 6 million people live in urban communities.) We had less than an average number of jobs in manufacturing. We faced the necessity of making a tremendous adjustment to technological change, not only in the city but also in the towns and rural communities. Another important thing that hit us was the loss of our young people, too many of whom had to leave the area because there were no jobs.

The gentlemen who sat around the conference table came up with a two-point program. First, they wanted an objective study covering all of the economic sectors of this area. And second, after the facts were in they wanted an action program to put the recommendations of the researchers into effect.

The group gathered 250 leaders from agriculture, education, business, labor, and government. They set up a board of directors representing the entire region and representative of all segments of the economy.

The economic study was set up at the University of Minnesota, with seven other universities and colleges in this area--including our own University of Minnesota at Duluth--doing the research studies on 25 sectors of the economy. The research studies covered recreation resources, taconite and iron ore, the St. Lawrence Seaway, forest products, education, technological industry, and urban development.

The research attempts to answer three questions. First, what are the current facts about a given economic sector? Second, what are the projections to 1975? Third, once the first two questions are answered, what are the alternative sources of growth that can provide more needed jobs?

If you don't remember anything else I say today, I hope you will remember one thing. The primary purpose of the Upper Midwest Economic Council for Research and Development is to accelerate the economic growth of this region, including the northeastern part of Minnesota, and to develop needed additional job opportunities.

The research phase has been completed. There are three action committees: one on agriculture, one on business and industry, and one on urban development. Those action committees are now going through the reports to come up with an action program.

To the objective research which has been done by educators, we will add the practical viewpoint of businessmen and labor leaders and, hopefully, come up with an action program that will create more job opportunities for the men and women in this entire region.

The success of this program is going to depend on just one thing--action taken at all levels. Nobody from the Twin Cities or Duluth or Butte, Montana, or Grand Forks, North Dakota, or Virginia, Minnesota, is going to bring this about alone. Success is going to depend on the action taken by men and women all over this entire area.

Fortunately, some action already has been taken in this region. The Northeastern Minnesota Development Association has been formed to join together all of the forces in our economy to do something about economic conditions in this area. It has a budget of over $1,000,000 for a 5-year period.

And our own action program, in reality, has already begun. With the University of Minnesota, we have set up the North Star Research and Development Council. It is a going organization, set up to help stimulate the growth of small industries that do not have their own research facilities and help channel the efforts of communities along the right lines.

In closing, I would like to quote from Governor Rolvaag. At a meeting of the Northeastern Development Association he said: "The meeting here today is a symbol of the determination of the people of Northeastern Minnesota to solve their own economic problems. The economic problems of Northeastern Minnesota are not going to be resolved by expecting all answers to come from Washington or St. Paul. Government can help, but local initiative and direction is initial to success. We stand ready to help, and I am confident this section of Minnesota stands on the threshold of one of the greatest development periods of any section of our State."

Questioning revealed that the research reports mentioned were available upon request from Mr. Jerry Pratt at the University of Minnesota.

DEVELOPING OUR ECONOMIC POTENTIAL

Mr. Robert Babich

Field Coordinator
Area Redevelopment Administration
Virginia, Minn.

In the last few years we have heard words such as "out migration," "retraining," "designated or distressed areas," and the awful word "automation." Yet we have been living with these words for some time, particularly in northern Minnesota. Thanks to better technology, today's farmer produces enough food and fiber for 26 people. Twenty years ago he produced enough for only four. But even with technology, many farmers cannot produce enough to make a living on the small tract of land that came down to them from their forefathers.

There are problems in other industries. Like many other immigrants, my dad came over here and worked as a logger. As our logging industry and resources became depleted, he went into mining.

We are concerned, when we see a land with such vast resources as ours, with such tremendously productive people--why we are compared with Appalachia, a one-industry area. We may be compared to Appalachia, but we will not end up an Appalachia. The people in northern Minnesota, realizing we have depleted our merchantable ores--our profitable ore production--have united to promote the industry we have: the taconite industry, which will begin a new era in our economic recovery, and our paper industry.

We are going through a transformation in our mining industry-- from a merchantable ore to taconite, a much more costly production. After the taconite plants are built, we will still have a problem. The median age of our population is now 46 years. Because of the training required, the plants will want to hire workers between the ages of 18 and 35. There is still going to be the problem of finding jobs for the people in the older age groups. To do this we have to attract new industry and encourage existing industry to utilize this available labor force.

Except during the war years, in northern Minnesota we have witnessed ups and downs, seasonal employment. One large firm here employs a thousand people--mostly women. If it hadn't been for firms such as this, the Range would be in more serious economic trouble than it is today. The men who have had seasonal employment in the mines would have found it impossible to raise their families if this work had not been available for their wives.

The Federal Government now has passed the Area Redevelopment Act (ARA) to attract industries to areas such as ours and to expand existing industries. The program offers a long-term amortization program at a low rate of interest. It will be up to constructive programs such as the ARA to bring in the industries that will employ both women and men.

PROFILE OF WOMEN WORKERS IN NORTHERN MINNESOTA

Mr. Roy Anderson

Manager, Duluth Office
Minnesota State Employment Service

First we need to define the area about which we are talking. What is northern Minnesota? We arbitrarily drew a line through the State of Minnesota, east and west, from the vicinity of Brainerd, which would include Fergus Falls on the extreme west, and drop down slightly to Pine City on the east. This gives us half of the geographical area of the State, including 27 counties in all.

According to the 1960 census--which, by the way, is the basis for most of our information--this 50 percent of the geographical area of our State has only 20 percent of the population, 19 percent of the labor force, and a little less than 17 percent of the women workers.

You have heard many times that in this decade the population of the United States will grow about 15 percent and that at the same time our labor force will grow about 20 percent. You also have heard that about half of this labor force growth will be youth under 25, and that the number of women in the labor force will increase by about 25 percent, as compared to an increase of 15 percent for men. In other words, by 1970, nationwide, more than one of every three workers will be a woman.

As our economy continues to grow and our technology advances proportionately, fewer workers will be needed to produce the goods we need and more workers will be needed to provide the services we request as our living standard goes up and our leisure time increases. In this rapidly changing world, the greatest demands in the future will be for trained workers in the professional and clerical fields, skilled and semiskilled, while the untrained will be left with less and less opportunity.

While this is a nationwide forecast, I am quite sure we can expect to have the same basic developments here in northern Minnesota. Maybe they won't be quite as dramatic as in the State or Nation as a whole, but we will have the same situation here.

Let's take a look at the current status of women workers in these 27 northern counties. According to the 1960 census again, 31.7 percent of the workers in Minnesota were women, compared with only 27.9 percent in northern Minnesota. Ten percent of the male labor force were unemployed in northern Minnesota, but only 6.5 percent of the female labor force were unemployed. This, of course, could indicate a more favorable employment situation among women. I think this may be true, but, on the other hand, we must consider that many more women are in the labor force on a part-time basis and leave for family reasons or seasonally after short periods of employment each year. Therefore, when their employment ceases, they cease to be part of the labor force. This is not true of men.

Let's quickly examine the occupations in which women in northern Minnesota are employed. The majority of women are occupied in much the same activities as for the State as a whole, but there are significant variations in certain fields.

First, among clerical and kindred workers we find 30 percent of the State's women employed, while we have only 23 percent in northern Minnesota. This may be because of a lack of opportunity in the more rural areas in northern Minnesota for clerical workers. When girls are qualified in this field of work, they migrate to metropolitan areas where employment is more plentiful.

Likewise we note that among operatives and kindred workers, total Minnesota has a greater percentage employed than we have. This results from the fact that northern Minnesota has relatively less of the production-line type of manufacturing that is conducive to the employment of women.

On the other hand, almost 10 percent of women workers in northern Minnesota are engaged in the private-household field, as compared with 7 percent for the State as a whole. Here we tend to make up some of our lacks in the other occupational groups. Also, a larger proportion of women in northern Minnesota than of women in the State find work in the service occupations, which include cooks, waitresses, kitchen workers, nurses' aides, and resort workers.

Now let's look at the industries in which these women are employed and compare these with industries in the State as a whole. Again, although the distribution of our women workers generally follows the statewide pattern, there are some variations, as we noted previously--the greatest difference being in manufacturing activity.

We also note a significant difference in the employment of women in wholesale trade and in finance, insurance, and real estate. I think the Twin City area has a tremendous effect on the statewide totals. The headquarters of many large insurance companies are located there, as are many wholesale establishments which employ hundreds of women. We don't have these sizable establishments in the northern part of the State.

There are a few other facts that may be of interest. In looking at the earnings of women in northern Minnesota, we find the median yearly wage in this part of the State is approximately $1,285, as compared with a median of $2,031 for women in the State as a whole. We believe we can attribute this to three factors. First, in northern Minnesota we have a number of relatively small communities where wages tend to be slightly lower. Second, the type of employment available has an influence, since neither the service industry generally nor the household field pays as high wages as those paid by manufacturing industries. Third, many of our workers are employed in the resort industry and often work on a seasonal basis.

We have more women in the labor force for short periods of time. While the seasonal factor exists for the entire State of Minnesota, it is not as prevalent as it is in northern Minnesota.

Now for a brief look at the educational status of women in northern Minnesota. In 1960, 27 percent of the women in the labor force in northern Minnesota were high school graduates, compared with 30 percent of the women employed in the State as a whole. Also, 4.4 percent of northern Minnesota women were college graduates, compared with 5 percent of the State as a whole. The median number of school years completed by women in northern Minnesota was 10.1, as compared with 11.6 for women in the State as a whole. Married women made up 57 percent of the total women in northern Minnesota's labor force.

Some of these factors on education may cause you to wonder a bit. I think there is one thing we have to remember here: A number of our women in the northern part of the State who have gone to college and become professional people migrate to the more metropolitan areas to follow these professions. This may account for some of the difference I've mentioned.

To sum up, I believe we can conclude that in northern Minnesota and in the entire State, employment opportunities for women compare favorably with those for men.

It was interesting to check our 1963 employment service activities. We found that 61 percent of the total placements we made in our office--exclusive of the casual labor type--were women, in spite of the fact that only one-third of the people registered with us are women.

Another interesting fact is that in June 1964, 37 percent of all people employed in Duluth were women. This figure, above the national average, results from the nature of our industries--service and trade.

Northern Minnesota is generally considered a labor supply area, and, in looking forward to the future, I believe it is reasonable for us to think in terms of the national labor force rather than just our own, especially when planning for our young people. With women as with men, training becomes the important factor. The more training the individual has, the better job he will qualify for. Some of the greatest national shortages are in occupations held to a great extent by women.

I believe it is safe to conclude that the problems of employment for women are not too different from those of men. Preparation has become the key to success in employment for either sex.

STATE LAWS AFFECTING WOMEN WORKERS IN MINNESOTA

Miss Margaret Browne

Acting Supervisor
Division of Women and Children
Minnesota Industrial Commission

Of the various laws in Minnesota regulating the employment of women, those relating to wages are the most controversial. More than 60 percent of the complaints received by our office during the past 2 years concerned the low wage rates paid by some employers.

Minnesota now has eight wage orders covering almost every kind of industry or occupation to which our minimum wage laws apply. Domestic service and agricultural workers are exempt from Minnesota's minimum wage laws. While some of the wage rates provided by our wage orders are low and should be revised upward, our investigators during the last 2 years found that there was due to 2,704 employees $218,661.94 in

wages. This involved 420 firms--with an average of $80.87 due each employee. This was accomplished despite the fact we had been operating with only three investigators for about a year and a half.

In comparing Minnesota's minimum wage laws with those of other States, I found the following situation. Of the 35 States and jurisdictions with minimum wage laws, 14 of the laws, including Minnesota's, apply to women and minors only; 16 apply to men, women, and minors; and 5 apply to women only. The reason why minimum wage laws apply to women or to women and minors only in more than half of the jurisdictions with such laws is not to differentiate between the sexes but to provide a floor under the wages paid to employees receiving the lowest wages--generally women and minors.

Some States have statutory minimum wage rates. Some establish minimum wage rates via wage orders. Minnesota is one of these. (I might add that the rates set by wage orders vary with the industry and, in some instances, with the size of the town in which the industry is located.) Some States have a combination of both wage orders and statutory minimums.

It is our considered opinion that the type of minimum wage law we now have is the best for our State at the present time. The present law could be amended to include men, but in comparatively few instances--unless the present values were raised--would males 21 years of age or older benefit from this action.

Minnesota also has a maximum hours law for women. I realize there are different points of view regarding the need for a law limiting the hours that women may be employed. First, we must recognize that while women are equal, they are not as strong physically as men and that there are more limits to their endurance. Second, we should note that our law does not apply to more than 58 percent of the women employed in Minnesota, since officeworkers, executive and administrative employees, nurses, domestic service workers, and other such employees are exempt.

More than 15 percent of the complaints we received during the past 2 years were about the excessive hours of work required of workers employed in establishments that are open 7 days a week, such as nursing homes, hotels, and restaurants. These establishments are not covered under the hour law. Until such time as it can be determined what effect, if any, the maximum hour law has on equal pay under the Federal law, or until an equal pay law is enacted in Minnesota, it is our opinion that no change should be contemplated.

There is great need for a change in our wage collection provision. We have found a wide variance in wage collection provisions enacted by the States. Some States provide for an attorney and secretary to handle wage collection cases. In some States cases are heard by the Department of Labor. Some States provide for claims filed with the Department of Labor or the Industrial Commission to be referred to city or county attorneys for action.

We believe this method could be effective and would provide needed service at a minimum cost to the State. Handling cases at the local level would eliminate travel expenses. The fact that such a statute existed might, in itself create a beneficial attitude and provide a legal means of collecting unpaid wages.

Another Minnesota law provides that women may not be employed in core rooms of foundries; neither may they lift more than 25 pounds in foundries and in other hazardous occupations. Law suits may be brought if necessary. This has not been a problem up to now, and we do not anticipate that it will be one in the future.

We are in the process of tabulating information collected during a wage and hour survey. I believe you will be interested in some of these figures.

In the amusement industry, excluding Minneapolis, St. Paul, and Duluth, the median wage rate for females is 88 cents an hour; for males, $1.22. In Minneapolis, St. Paul, and Duluth, the median wage in the amusement industry for females is 88 cents an hour; for males, $1.29. These rates are low because a larger number of minors are employed in this industry.

In the amusement industry in Minneapolis, St. Paul, and Duluth, the percentages of males and females receiving less than $1.00 an hour are: females, 74.3 percent; males, 34.8. Under $1.15 an hour: females, 80 percent; males, 41. Over $1.50 an hour: females, 7 percent; males, 39.3 percent.

In the retail merchandising industry we have the figures for the State, excluding Minneapolis, St. Paul, and Duluth. The minimum wage for females is $1.15 and for males, $1.52; 15.2 percent of the females and only 9.5 percent of the males receive less than $1.00 an hour. Under $1.15 an hour: 50 percent females; 25 percent males. Over $1.50 an hour: Females, 11.4 percent; males, 53.1 percent.

These are the breakdowns on some other occupations. Sales: Females, $1.12 an hour median wage; males, $1.57. Stockroom workers and miscellaneous: Females, $1.14; males, $1.29. Pharmacists: Females, $3.06 an hour; males, $3.54 an hour.

This small sample indicates that women are employed in the low-paying jobs or receiving less for the same type of work or a combination of both.

In my opinion it is very necessary that women continue to press for an equal pay law in Minnesota. This is a situation where persistence is required.

Minnesota has no laws regarding daily limitation of hours, rest periods, or lunch periods, which many other States have. Possibly this group will want to consider doing something about that, too.

FEDERAL LAWS AFFECTING WOMEN WORKERS IN MINNESOTA

Mr. John Tennant

Assistant Regional Director
Wage and Hour and Public Contracts Divisions
U.S. Department of Labor

The Fair Labor Standards Act, a federal law originally passed in 1938, sets a floor under wages and provides overtime pay after 40 hours a week. As I am sure everybody must know by now, the minimum wage for employees engaged in interstate commerce and in the production of goods for interstate commerce is $1.25 an hour. For employees newly covered by the 1961 amendments, the law requires a minimum wage of at least $1.00 an hour, with time-and-a-half after 44 hours. In September of this year that minimum will be increased to $1.15, with time-and-a-half after 42 hours; and in September 1965 it will be brought up to the general minimum of $1.25, with time-and-a-half after 40 hours.

Of great interest is the most recent amendment to the Act, designated as Section 6 (d). It is called the Equal Pay Amendment of the Fair Labor Standards Act. This Equal Pay Act prohibits discrimination based on sex in the payment of wages within any establishment covered by the Fair Labor Standards Act.

What is meant by establishment? An establishment is a distinct physical place of business rather than an entire company or enterprise which may include several places of business. A firm's manufacturing plant in one location, a warehouse on the outskirts of town, and its office in the city's center, constitute, for the purpose of the law, three separate establishments.

On an establishment basis, then, the prohibition against wage discrimination based on sex is applied to equal work--to jobs that require equal skill, effort, and responsibility, and that are performed under similar working conditions.

It is the job content that counts, with respect to the Equal Pay Act, not the job title. For instance, if both men and women have the title of retail clerks, but men sell major electrical appliances and women sell infants' wear, the job responsibilities might support a finding that their jobs are, in fact, substantially different.

In determining whether jobs require equal skill, we take into account such factors as experience, training, education, and ability. When we measure effort we measure the physical and mental exertion needed for the performance of a job. For example, a male checker in a supermarket may spend part of his time carrying out heavy packages or replacing heavy items in stock while the female checker devotes an equal amount of effort during a similar part of her time performing work requiring greater dexterity, such as arranging displays of spices or other small items. Their "effort" would appear to be equal. Incidentally, the occasional or sporadic performance of an activity which may require extra physical or mental exertion is not in itself sufficient to justify a finding of unequal effort.

Another consideration in measuring jobs under equal pay standards is the principle of equal responsibility. This involves the degree of accountability required in the performance of a job, with emphasis on the importance of the job obligation.

In order for the equal pay standard to apply, the jobs also must be performed under similar working conditions. Jobs in different departments of an establishment are not necessarily performed under similar working conditions.

I have given you what I suppose might be called a "horseback survey" of the recent amendment to the Fair Labor Standards Act called the Equal Pay Standard.

AN EMPLOYER LOOKS AT WOMEN WORKERS

Mrs. Virginia Kirby

Personnel Director
Arrow Company
Virginia, Minn.

The Arrow Company is a division of the Cluett, Peabody and Company, Incorporated. We now have four plants in operation on the Range.

Most of our employees are women--680 of them. The majority are stitch operators--560. The rest are service people, pressers, packagers, supervisors, and office personnel. We employ only 70 men, yet we still have managed to stay in business, regardless of what anyone may say about women and absenteeism, leaves, and turnover. Many of our women have been with us for more than 5 years. Over 100 have 15 years of service or more. Most of us in the office have been with the company for 16 or 17 years.

We do not have in this area a ready supply of experienced operators as plants do in the larger cities. Therefore, our training costs are great. Training time averages 16 weeks. Applicants must be screened carefully to cut potential turnover and absenteeism to the minimum.

Screening procedures are not based primarily on age. They are designed to find out whether a prospective employee can cope with the speed of a power sewing machine and the pressure of a production quota, and whether she has plans for further education or for marriage. Her attitudes and health are considered; her family responsibilities and the arrangements she will make for the care of young children are frankly discussed, as is her husband's attitude toward her working outside the home. If an applicant seems promising, she is tested for dexterity and coordination and is given a physical examination.

Careful screening of the applicants eliminates much absenteeism and turnover. By taking the time to go over some of the problems that could come up and by encouraging applicants to give honest answers we save time and trouble later on.

Once the applicant is hired, we allow leaves of absence for personal illness, illness in the family, and short leaves for marriage and a honeymoon.

Most of our employees are quite conscientious and do not go overboard on this. Our leaves and absences combined average about 4 percent. Absences alone average 2.5 percent. This includes both men and women.

Our turnover rates for the first 6 months of 1964 were 24.1 percent for men and 23.1 percent for women. Note that this is 1 percent less for women.

It has been a long, hard struggle for this new industry on the Range. Public sentiment was against us; people had the old sweatshop idea of factory work. Women were not accustomed to the idea of working outside the home, since so few jobs had been available for them. Husbands had the old-fashioned idea that women should stay at home.

Now, we have made friends. The jobs women hold help financially during mine layoffs. We feel that we have given a definite boost to the economy of the Range.

ORGANIZED LABOR LOOKS AT WOMEN WORKERS

Mr. Curtis Miller,
Editor Labor World
Duluth, Minn.

Eliminating unfair competition based upon the exploitation of women workers or any human beings has always been one of the primary goals of the American labor movement. If this statement seems to be to you just a glittering generality, let me come down to specifics on it.

Some people say that labor demands such high wages for women that employers can't afford to hire them. You've also heard that unions are pricing themselves out of the market, or that union wages are responsible for inflation, but have you ever asked yourself this question: Is it too much to expect that, regardless of a worker's sex, a full-time worker should be paid enough to enjoy a modest standard of living?

Minnesota employment service statistics show that the nonfarm workers in this State earned an average hourly wage of $2.60 in May. Yet the best yardstick of what it takes to afford a decent standard of living for an average Minnesota urban family of four people is $3.25 an hour. Therefore, the current average wage in this State is still about 65 cents less than it should be. Families of four headed by a man who brings home less than $3.25 an hour don't enjoy a decent standard of living unless the wife earns a second paycheck to make up the difference.

There now appear to be so many wives and mothers making up the difference that we have an almost irreversible trend underway toward a two-paycheck system of family support. One could even argue that this amounts to turning the clock back a little bit. In preunion days the whole family worked in a factory to earn food, clothing, and shelter for all of them. Then for a while the unions stopped this practice by getting enough coin from a single paycheck to buy life's necessities. Now we expect more from life than necessities; the single paycheck is often no longer enough. As soon as the kids are in school, many mothers head back to a job.

Sociologists can measure the sociological impact of this trend. Organized labor is not against the idea of women workers, but there is an economic impact that worries us. There are many, many women who are the sole support of themselves or even a whole family. Are their chances of earning a decent income, a decent single income, hurt or helped by other women workers who compete with them to earn a second supplemental income?

There are many, many mothers of large families who cannot possibly expect to go to work outside their homes until rather late in their lives. These families, too, while the children are still at home, are utterly dependent upon the single income earned by the father. Are his chances for a decent income hurt or helped because his fellow workers on the job need not strive for better wages as vigorously as he must, because their wives are working to make up the difference?

These are crucial questions that come down to the core of American family life. Who knows how many wage-earning families are involved in this kind of situation and the frustration they experience?

One other aspect of the problem is the apparent reluctance of many women to join a labor union. I don't see the economic logic in this. Why pay a trained saleswoman--who must be well groomed and well dressed every single working day--a dollar an hour less than the wage earned by a trained women in a packaging line of a meatpacking plant? Or why should a woman poultry dresser be paid half as much as the woman who handles pork? The answer is often simply that one woman works under a union contract and the other doesn't.

There is one final point I would like to mention. Years ago, when mothers became freed from the care of preschoolers they found time for quite a bit of important volunteer work in their communities. Today, the tendency for many women to go back to work leaves no time--or very little time--for community service. So we have a severe shortage of community service volunteers right here in Duluth. Some answer must be found for this problem.

At the conclusion of Mr. Miller's talk, the Opening Session adjourned and participants met in four workshops. Workshop reports were given at the Dinner Session.

DINNER SESSION

The Dinner Session of the conference was called to order by Miss Horn, who called on Mrs. Marion Smith, a member of the Commission on the Status of Women and chairman of the workshops, to preside during the presentation of workshop reports.

SUMMATION OF THE WORKSHOPS

Employment of Women--reported by Mrs. Helen Norris

The workshop found no one set pattern of approach, no one single area of concern in connection with women who work. Young women, middle-aged men, older women, the educated, the uneducated--women of all economic classes are in the labor force. All these women must be considered only on the basis of their qualifications and abilities whether they work out of economic necessity or for self-fulfillment.

The impact of recent Federal legislation will probably be felt this year. As the Federal Equal Pay Act and the Civil Rights Act are enforced, comments may be made indicating a reactionary response. Nevertheless, State as well as Federal equal pay laws are needed.

It was pointed out that younger women more often work out of necessity than out of choice. The larger increases in percentages of women working are in the older age groups. The opinion was strongly voiced that women should have a choice about what they will do. It is not wrong for women to work rather than to stay at home. Since women are working increasingly to achieve self-recognition, counselors of women and girls should call attention to this.

Women are usually overlooked when planning commissions are named. They should be on industrial development boards such as NEMO (North Eastern Minnesota Organization for Economic Education) which needs women's experience and leadership ability.

In the broad view, every approach must be used to help make both men and women useful and happy members of society. The community must be creative in regard to employment opportunities and jobs. At the same time, society must not overlook or denigrate the contributions of those women who find satisfaction in making their contributions through home and community activities.

Education of Women--reported by Dr. Florence Schneider

The workshop heard an explanation given by Dr. Maybelle McCullough, chairman of the Education Section, Governor's Commission on the Status of Women, of the work of that section. The workshop also listened to a resume of the Minnesota Plan for Continuing Education of Women given by Miss Barbara Nantini.

The group then discussed problems suggested by the discussion leader, considering them to some extent in relation to the Minnesota Plan. Discussion revolved around these questions: What can we in education do to cope with the problems raised by the economic status of women in our area? How realistic is the approach of the commission in identifying these women? What can the commission do to reach all the women in the area who may need further education? Could counseling centers be set up where none exist? Could traveling counselors have a temporary headquarters? Could wider use be made of

the present employment services? Are the tests and inventories that we now have adequate, or should new kinds of tools be developed to meet the needs of more mature women?

In conclusion, the workshop voted unanimously to present to the conference the following motion:

> That the Minnesota Arrowhead Conference on the Status of Women recommend to the Governor's Commission on the Status of Women that the Minnesota Plan for Continuing Education of Women be continued and extended to cover northern Minnesota.

(Somewhat later during the session, the recommendation was unanimously adopted by the conference.)

Home and Community--reported by Mrs. Jewell Darland

Two recommendations originally suggested to the President's Commission on the Status of Women by its subcommittee on Home and Community were discussed by the group.

There is a great need for day care centers for the preschool children of working mothers. Though some are established in Duluth, there are not nearly enough. Not too many difficulties stand in the way of licensing a home to care for a small number of children.

Day care centers for the aged are also greatly needed, as are centers for the retarded.

The second recommendation dealt with homemaker service and household help. While some service of this type also is available, it is inadequate for the needs of the community. Mothers who work or are ill and the aged who prefer to stay at home rather than be placed in rest homes or institutions are frequently in need of this service.

Often these services are available but people are unaware of this help. There is also a problem finding women who want to be trained for this type of work. Thus far, no organized effort has been made to train homemakers.

Citizen apathy concerning these various needs is marked. People need to be educated and stimulated. This is an area in which trained volunteers can be extremely valuable since welfare agencies are not able to or cannot afford to meet all demands. Volunteer citizens could help also by looking into the financing of these services.

Workshop members believed that their main contribution would be made by developing awareness among the citizenry.

Legal and Civil Problems of Women--reported by Mrs. Ester Tomljanovich

The workshop reviewed areas of the law that might be discriminatory. It felt that discrimination against women existed in State laws concerning jury service, in laws relating to the right of action for loss of consortium, and in laws relating to certain crimes. Other areas which should be investigated to determine if there is discrimination are property and inheritance laws and laws and ordinances that restrict the employment of women. The workshop suggested that action should be taken by the Governor's Commission on the Status of Women and the Council on the Status of Women if it is found that these laws are discriminatory.

Women's role in civic and political life seems to be recognized more adequately at the higher levels of government than it is at the local community level. It was suggested that women should assert themselves more and be more energetic in making known their ability, availability, and desire to serve.

A final consensus was that women should take the lead as individuals and through organizations such as the Council and the Commission in changing attitudes, laws, and social customs that stand in the way of legal and political equality for women.

PRESENTATION OF THE GOVERNOR'S CITATION

The Governor's Citation, awarded to Mrs. Marion Smith for her long, varied, and distinguished service to the women of Minnesota in the field of education, was presented on behalf of the Governor by his Secretary, Mr. James Rice. The Citation read as follows:

WHEREAS, Marion Smith for some 40 years has served with distinction as a teacher and principal in the Duluth public schools; and

WHEREAS, throughout her many years of service she has maintained the highest dedication to the ideals of education and concern for her fellow man; and

WHEREAS, her vocational and extra-vocational activities together have established a record of outstanding attention to and action on the public issues of the day; and

WHEREAS, throughout this life of public interest and service her devotion and care for her own family never lagged; and

WHEREAS, her personal life, as well as her public life, has been an example of womanhood as we would wish it;

NOW, THEREFORE, I, Karl F. Rolvaag, Governor of the State of Minnesota, do hereby send greetings and do commend Marion Smith for her long, dedicated, and distinguished service to the citizens of Minnesota throughout her years as an educator and as an official and working member of countless organizations, both public and private.

Mrs. Smith was completely surprised and deeply grateful. Expressing her appreciation to the Governor, she said: "I won't say it is deserved or undeserved or anything like that. I worked with a great many of you and it has always been fun. You have been a great part of it, as you know. I look around the room and see so many folks I worked with in so many different capacities, it is terrific. So many others should have this ahead of me. This is lovely."

The last part of the dinner session was presided over by Mrs. Viola Hymes, Chairman of the Governor's Commission on the Status of Women. In introducing Mr. James Rice, Secretary to Governor Rolvaag, she noted that he was more than instrumental in helping to organize the commission. "Without his help," she said, "I think we would still be in the process of forming the commission."

PURPOSE AND HISTORY OF THE GOVERNOR'S COMMISSION ON THE STATUS OF WOMEN

Mr. James Rice

Secretary to Governor Karl F. Rolvaag

First I would extend the warm and personal greetings of our Governor, Karl F. Rolvaag, and I would express to the sponsoring groups of this conference his deep appreciation.

I would like, if I may, to give you some insight into the way the commission came into being.

When we met on many occasions to establish the Governor's Commission on the Status of Women, we were concerned with a higher ideal than the personal feeling that the

Governor has for women, or that I have, or that any one conferring with us had. I think we immediately rejected alike the leering, almost animalistic concept of women as chattels, and the smug, arrogant attitude that some had that women are decorative and should be patronized rather than recognized for their true worth.

Building from that, we realized that what is most needed in the world today is for people to have the opportunity to fulfill all their talents. This applies not only to women but to every citizen in our society. What we need least in this country are strident voices of hatred or of prejudice or of bias.

We structured this commission so there would be 45 members, 9 of whom are men. It is a wonderful commission. Its talents are multiple. It is a sensitive commission whose members have given of themselves to others. It is one of the few commissions whose members were not chosen by saying: "Let's have a person from labor, someone from education, someone from the civic organizations, and someone from the service groups." Each member was individually chosen and many had made contributions in several areas of the community.

So many talented individuals were recommended that in order to take advantage of all their potential contributions we established subcommittees in addition to the main commission.

I am going to conclude my remarks now by saying that the real hope of our society is that this commission succeeds in Minnesota and that commissions succeed in every State in the Union. I say this because we have many sensitive people, highly talented people, highly educated people, who can show--and show in a very direct way--what the consequences of bias and prejudice are. Now we have a group that has experienced bias, has experienced prejudice, and that can go forth and spread the message that we need full utilization of our human resources.

I would like to say this when I am talking to a group that is composed predominantly of women. All of us think of Susan Brownell Anthony as a leader in the suffrage movement, but I would remind you that in 1863 she was a cochairman with Mrs. Stanton, wife of a Cabinet member, of the Emancipation League, whose purpose was to gain support for the Emancipation Proclamation. I think a council on the status of women, a commission on the status of women, a regional group on the status of women should also aim to knock down the barriers of bias and prejudice that keep a large group of our citizens from their full opportunities.

The principal address was delivered by Mrs. Mary Dublin Keyserling. She was introduced by Mrs. Hymes as Director of the Women's Bureau, a noted economist, and a woman of compassion.

PRINCIPAL ADDRESS

Mary Dublin Keyserling

Director, Women's Bureau
U.S. Department of Labor

All of you who are taking part in this great national effort to upgrade our wonderful, but not fully used, national resource--the brains and skills and hearts of women--are engaged in one of the most important movements in our history.

I don't believe that anyone who followed the appointment of the President's Commission on the Status of Women back in December of 1961 knew how important this action would be. We couldn't have dreamed that in so short a time this action would have such tremendous and far-reaching results.

Do you know of a better test of the height a civilization has reached than the place of women in it? Doesn't the status that women hold in a society illustrate the values that society places on the rights and the dignities of the individual, of all its people? I think that is one of the many things that makes our work so meaningful, so important--because we realize that we are engaged in an enterprise that is strengthening the fabric of our society and democratic institutions.

You know that at his very first Cabinet meeting, President Johnson declared that women would no longer be second-class citizens, that the great resource that is women's talents would be called upon more fully in the interest of the Nation, and that the Federal service would be a show case to our whole country and to the world. In the very brief time between the middle of January and the middle of June, over 260 women had been appointed to high-level jobs--jobs paying $10,000 and more. In addition to the 260 appointments, 784 women had been promoted at these high levels.

As a result of a Presidential directive, all hirings and promotions in Federal service are made on the basis of qualifications alone, regardless of sex. This directive also affects the efforts the United States Employment Service makes to encourage employers to hire on the basis of qualifications alone.

You all know that the President's Commission recommended the enactment of the Equal Pay law, and now this is the law of the land. This has much more significance than just the payment of an equal wage for equal work. It starts a whole movement to upgrade women, because, as you know, women workers are concentrated in the less skilled and less well paid jobs.

Another implementation: The Civil Rights Act, which the President signed on July 2, includes Title VII which advances equality of employment opportunity by forbidding discrimination in hiring, training, and promotion on the basis of sex. I don't believe this could possibly have become law had it not been for the work of the President's Commission.

Even more important, I think, than the changing of employment practices and the forging of new laws is the fact that the recommendations have made us take a new and realistic look at the problems that women face. They have made us analyze the trends of the past, determine where we are now, and set goals for the future. We have become much more aware of what is happening to women in the work force.

In 1940, the average age of working women was 28. Today it is 41. The whole pattern of work is changing largely, I think, because we are enlarging the area of choice for women. In the current pattern, women work when they leave school. They marry at a younger age. By the time she is 30, the average woman has had her last child. Instead of having an average life expectancy of 48 years--which was true at the turn of the century--a girl baby now can expect to live to the age of 74, and this age is rising from year to year.

How completely changed are the patterns of our lives! In our sixties and seventies we are not worn out and old, we are young. How many of us know wonderful women of 80, 82, and 84 who are still doing full-time jobs, who are healthy, active, very much a part of their world, spirited, contributing their best. We are not all going to be active at age 82 or 84, but certainly until we are 65, or even 70, most of us will be wanting to pull our weight. From the time we are 35 or 40, when our children are well launched, more and more of us will want to contribute what we have. We don't have to look for paying jobs. There are many ways to seek fulfillment: through creative expression of our talents, as painters or musicians; through doing more in our own homes; through community service--a very important part of American life, almost unique around the world.

The work of the commission has made us face up to the obstacles, the difficulties, the disadvantages that still confront us. It has made us ask what we are going to do to remove those obstacles. It has made us consider in a much more ambitious way our new

needs for training and education, for better guidance, for improved services. It has made us aware of a growing need for women to participate in politics and in civic affairs.

I think it has also demanded that society ask how it can reorganize itself to give women more opportunity to realize their potential. What, for instance, are we going to do about part-time work for women? Isn't it almost silly that so many of our employers don't permit a teaming up of two women--one who could work mornings; the other, afternoons? Women, who because they have children of their own are that much richer in understanding human nature, have that much more to contribute. I ran a research organization at one time and it was just as easy to take two women, working part time, as one man, full time. Actually, it was very advantageous; they brought a greater measure of enthusiasm, of creativity. I think our society should be made aware of this, should adjust more than it has done, should become more flexible.

What I think is so important about the work of the commission is that it asks not just what society can do for women or what women can do for themselves to improve their position, but it asks what women can do for society, and this is very important.

All the activity and discussion that the commission has brought about is helping to open minds, to change attitudes, to enlarge the sense of what is doable. Let me enlarge on the phrase "change attitudes." Isn't this the key to what we are all about to do? Important as is the passage of a good law, isn't it just the beginning of progress? The passage of a good law is in itself the expression of a changed attitude but the implementation of a law also calls for new attitudes. Many changes, as you and I know, go beyond the scope of law; they must take place in the hearts of men.

I feel strongly--as I hope all of you do--that the work we are doing together is helping to make our world a better place. I think we get a sense from what we are doing that great things are happening in America today, and you who are here today are part of this wonderful and really thrilling adventure in human betterment.

All of us who worked on the committee reports recognized that when our society is healthy and moving ahead rapidly toward full employment and full production, this is when women can advance most rapidly. In this kind of atmosphere, discrimination begins to dissipate and we can make headway against poverty. It is in this atmosphere that all of us can more fully be used; all of us have greater opportunities for free choice.

If I were asked to name the most important development that has come out of the President's Commission on the Status of Women, I would say continuation--the appointment of the Interdepartmental Committee on the Status of Women and the Citizens' Advisory Council on the Status of Women, of which your Viola Hymes is a member. An essential part of this continuation has been the establishment of many Governors' Commissions on the Status of Women.

In Minnesota and throughout the land, thousands of people are being involved in deliberations such as we have enjoyed today. Everywhere, citizens are holding the measuring stick of human need up to their communities to evaluate the current situation, to appraise the possibilities for the future, and to set and attain new goals.

I am reminded of Mrs. Lyndon Johnson's concluding remarks in a speech she made a few weeks ago at the national YWCA convention. Some of you may have heard it. She quoted Emerson, who wrote a century ago, "We think our civilization is near its meridian, but we are yet only at the cock crowing and morning star." Mrs. Johnson, taking that as her cue, added, "Emerson's words are as meaningful today as they were when he said them. And you can make the morning beautiful."

And we can!

Pub Date - 65 52p.

*COMMUNITY AGENCIES (PUBLIC); *VISITING HOMEMAKERS; *PROGRAM GUIDES; *PROGRAM DEVELOPMENT; PERSONNEL POLICY; PROGRAM ADMINISTRATION; COMMUNITY RELATIONS; AGENCY ROLE; STAFF ROLE; *COMPANIONS (OCCUPATION)

Representatives of 17 national welfare and health agencies working as a committee selected topics basic to a code of standards and outlined particulars related to the topics. Reinforced with 30 additional persons knowledgeable about homemaker-home health aide programs, the committee established principles which were then coded for presentation in this document. Separate chapters treat (1) the purpose and function of the homemaker-health aide service, (2) the provision of service in terms of referral, criteria of elegibility, development of a service plan, and supervision and evaluation, (3) organization and administration of the service in terms of the governing body's responsibilities. For example, the establishment of the legal status of the agency and provision for financial support, (4) staffing of the service in terms of provision for executive, supervisory, and direct services and utilization of consultants, volunteers, and supplementary workers, (5) education program including orientation, pre-assignment training, and on-going education, (6) records of intake, service, personnel, and finance, and (7) community relations including broad relationships and working relationships at the direct service level. NATIONAL COUNCIL FOR HOMEMAKER SERVICES, INC.
1790 BROADWAY, NEW YORK, N. Y. 10019

VT006322

The National Council for Homemaker Services was incorporated in 1962 to stimulate the expansion and promote the improvement of homemaker services throughout the country. Membership is open to agencies providing homemaker services and to organizations and individuals interested in supporting the Council's purposes.

Working cooperatively with other national health and welfare organizations and with public and voluntary agencies, the Council:

- Promotes understanding of the values of homemaker services
- Provides a central source of information and a medium through which knowledge and experience can be pooled and made available
- Encourages and guides communities in organizing and extending homemaker programs
- Promotes development of standards
- Publishes reports and distributes educational and promotional materials
- Sponsors conferences and seminars.

Contents

6. BIBLIOGRAPHY 49

To: MRS. JUAN T. TRIPPE
President
National Council for Homemaker Services

From: MARION YAGUDA
Chairman
Committee on Standards
National Council for Homemaker Services

It is my privilege to transmit to you herewith the completed Standards Code for Homemaker-Home Health Aide Services. The Committee, which you appointed in September 1964 to develop this statement, has worked diligently during the ensuing months. It has had the utmost cooperation in its endeavor from the homemaker-home health aide field: individual representatives of this field have enriched the statement as members of its sub-committees. The Committee has benefited greatly from the consultation given by appointed members of the United States Department of Health, Education, and Welfare. The staff of the National Council for Homemaker Services has performed effectively at all times to promote and coordinate the efforts of the Committee on Standards.

July 1965
MY:aw

The Code, Contract and Council

The development of the Code of Standards for Homemaker-Home Health Aide Services has been a major undertaking of the National Council for Homemaker Services. The principles set forth in it result from research on current practices in the homemaker-home health aide field: a majority of appropriate agencies throughout the United States have contributed to this research. Representatives of seventeen national welfare and health agencies, chaired by an outstanding authority on homemaker programs, have worked as a Committee on Standards for the Code from September 1964 through June 1965. They have had valuable consultation from representatives of three Divisions of the U. S. Department of Health, Education, and Welfare, the Children's Bureau in the Welfare Administration, the Division of Chronic Diseases in the Public Health Service and the Community Research and Services Branch in the National Institute of Mental Health.

The Committee on Standards, during the fall of 1964, selected certain topics considered basic to the Code and outlined particulars related to them. Thirty additional individuals, knowledgeable on homemaker-home health aide programs, joined the Committee on Standards in early 1965 to provide further consideration of necessary Code content. A three-day workshop, to clarify and establish valid principles for the Code, was held at Princeton, New Jersey in mid-March. These principles have since been coded and after considerable scrutiny are presented in the following document.

It is believed by the Committee that the principles included in the Code are applicable to all homemaker-home health aide agencies. They are valid for autonomous agencies or programs set up under voluntary or tax supported "host" agencies; they are applicable to a beginning or small homemaker-home health aide program and to the large agency with many professional employees and homemaker-home health aides. The Committee has, therefore, provided standards for the establishment of new homemaker-home health aide services and the expanding and im-

proving, where necessary, of older programs. These standards will be minimum for certain agencies; they will offer goals to work toward for others. They set forth general principles which may have to be adapted either because of agency structure or local or state laws.

The National Council for Homemaker Services and the Committee on Standards appreciate the practical assistance given toward the development of the Code by the Department of Health, Education, and Welfare. Only because a three-way contract was drawn up between the Bureau of Family Services and the Children's Bureau in the Welfare Administration, the Division of Chronic Diseases in the Public Health Service and the National Council for Homemaker Services has it been possible to finance the production of the Code. The Code represents a worthwhile collaboration between Federal agencies and a voluntary national organization.

Betty Trippe

MRS. JUAN T. TRIPPE, *President*
NATIONAL COUNCIL FOR HOMEMAKER SERVICES

Homemaker-Home Health Aide Service

Homemaker-Home Health Aide Service is an organized community program provided through a public or voluntary non-profit agency. Qualified persons—homemaker-home health aides—are employed, trained and assigned by this agency to help maintain, strengthen and safeguard the care of children and the functioning of dependent, physically or emotionally ill or handicapped children and adults in their own homes where no responsible person is available for this purpose. The appropriate professional staff of the agency establishes with applicants their need for the service, develops a suitable plan to meet it, assigns and supervises the homemaker-home health aides and continually evaluates whether the help given meets the diagnosed need of its recipients.

CHAPTER I

The Purpose and Function of Homemaker-Home Health Aide* Service

Homemaker-Home Health Aide services are multiplying rapidly throughout the country. They are developing under a variety of auspices not anticipated even by the far-seeing individuals who initiated the first such services in the early part of this century. They have earned their popularity as adjuncts to certain of the helping professions—medicine, social work, public health nursing—and especially because of the direct and practical help they have given to people. Much of the present demand for the creation and expansion of homemaker programs is due to the growing conviction throughout the United States that, generally, people of various ages and personal problems are happiest in their own homes if safeguards in necessary services are offered to them.

Homemaker services, in their present form, originated in this country in the early nineteen-twenties under the auspices of voluntary social agencies: concern then centered on children. It was believed that children, who had been deprived of their mother's care through illness, death, desertion or temporarily for less dramatic reasons, could profitably remain in their familiar surroundings if homemaker services were provided to maintain home values for them. The voluntary social agencies have at this time diversified their efforts; they are still, however, the largest providers of homemaker service. Public welfare agencies initiated their first homemaker programs—now rapidly expanding—during the mid nineteen-thirties. Public health agencies, both voluntary and official, recognized later the value of homemaker service for various diagnostic groups cared for in the home and many programs are now part of local visiting nurse associations or health departments. A heartening aspect of the current expansion of homemaker service is the concern of Federal and State departments of welfare and health that this service be provided through local programs for many people disadvantaged by poverty and chronic disease. Because they believe the service, where indicated, will assist families to raise levels of living, and bring comfort to individuals with chronic illness, they are willing to furnish funds, within the limits

* *Generic term "Homemaker" used throughout the Code.*

of their legislative and budget authority, to local official and voluntary agencies for on-going and demonstration purposes.

Although homemaker programs originated, as stated, primarily as a service to children—and still place the well being of children among their most important objectives—they have gradually extended help to other groups: the aging, blind, mentally retarded and physically handicapped children and adults, convalescents, the chronically ill and the mentally disturbed. It should be emphasized that service is provided to these and other appropriate groups in their homes by professionally supervised, trained persons—homemakers. Homemakers are staff members of an organized non-profit community agency: they are selected and assigned, according to the need of the individual or family for help, after the professional staff of the agency has evaluated the applicant's needs and determined whether the homemaker service can meet them.

Valuable as homemaker service is, it should never be regarded as a panacea. No matter how much warmth and good management homemakers offer, certain homes are not for children. It is equally true that older people, the blind and other similarly disadvantaged groups may be isolated and lonely unless more recreation and emotional support is offered than can be given by a homemaker service at its best. The handicapped and chronically ill in various diagnostic groups may gain more facility in self-management and activities of daily living or obtain other needed care in a group setting, where medical supervision and other professional services are readily available to them in adequate amounts. The professional staff of the homemaker agency again must, and does, accept responsibility for reviewing all facets of the applicant's problem and for determining whether it can best be solved by homemaker service or another plan.

I—What is the essence of homemaker service? Its true purpose has remained constant, although demands for it have resulted in an increasingly wide variation in groups served.

> Homemaker service is provided to maintain, strengthen, improve and safeguard the home and family life for individuals and family groups when such service is appropriate.

II—The homemaker agency fulfills its purpose through provision of service to meet the diagnosed needs of a variety of individuals and families. The contribution of homemaker service to families will differ, to an extent, from that offered to individuals. It is implicit in a family situation that even a poor home will provide certain

emotional supports, through its family relationships, that are not available to the individual living alone. Many families, nevertheless, will need a broad range of services from the homemaker program and from other agencies in order to offset a family breakdown. A homemaker program contributes to families in many ways.

1. It enables children to remain at home, if the environment is favorable, when the usual homemaker, generally the natural mother, is incapacitated by illness or when death, desertion or other reasons deprive them of her help.

2. It is increasingly used to help teach young, inexperienced, migrant, or irresponsible mothers improved methods of household management and child care and to lighten the burden of those mothers unable to cope with home management needs of a large family.

3. It provides, in conjunction with protective social agencies and the courts, protective care to children in their homes during a diagnostic period and until an optimum on-going plan is developed.

4. It frees an employed adult, responsible for the economic support of the family, from the direct care of children, older or chronically ill members of the family so that he can maintain his job responsibilities during periods of home crises.

5. It provides, through assignment of a homemaker, a professionally supervised, trained person to give attention to an individual family member requiring simple personal care and thus enables other family members to fulfill their usual responsibilities in the household and toward each other.

6. It enables family members, who must provide continuing personal care to an elderly, blind or chronically ill family member, to have temporary periods of rest or relief on a planned basis, either through daily assignment of a homemaker or through a block assignment for away-from-home purposes, including vacations.

III—Reason for the placement of a homemaker will differ somewhat if the applicant is an individual living alone rather than a member of a family; basics in home-management will be the same. Homemaker service can benefit individuals in various ways.

1. It allows individuals to remain in familiar home surroundings and so helps them avoid unnecessary placement in a hospital or other institution or foster home.

2. It provides care for individuals in order to lessen the stress on the usual caretaker, if there is one, and to free him for other urgent family responsibilities.

3. It supplements the professional service of social agencies necessary in protective care programs for appropriate older or mentally incapacitated individuals.

4. It supplements, and is supplemented by, professional health services through provision of necessary personal care for individuals during their physical and mental rehabilitative processes; it helps promote facility in self-management and activities of daily living; it is supportive to the over-all medical treatment plan.

5. It establishes a favorable home climate for convalescents and thus helps them to return home from hospitals or other institutions without unnecessary delay.

6. It lessens, through the personal care, home management and emotional support provided by homemakers, the economic, physical and emotional burdens of chronic illness for various diagnostic groups.

Summary Statement on Purpose and Function

Homemaker service exists to maintain, strengthen and safeguard family life. It is provided by a tax supported public or voluntary non-profit community agency: the homemakers performing under agency aegis are qualified and trained; and are selected, assigned and supervised by the professional staff of the agency. Children and adults with various medical and social diagnoses benefit through homemaker service.

Originally organized to serve children, it has broadened its scope to include many economically, physically and emotionally disadvantaged groups of both children and adults. The help given to an individual living alone or to a family group may differ according to the need of the individual or the family group. The professional staff of the agency, therefore, continually evaluates the service plan and determines its on-going suitability.

CHAPTER II

The Provision of Homemaker-Home Health Aide Service to Individuals and Families

The service of a homemaker program is the reason for its existence. Once this service is effectively established, referrals will come from many directions. If the program is a unit of a large tax supported or voluntary welfare or health complex, other divisions of its own agency will undoubtedly absorb much of its effort: such homemaker programs, however, frequently accept applications from the broader community. If it is an autonomous program, only concerned with homemaker activities, various community sources will depend on it for service. Under whatever auspices it is established, the basic question to be answered by the staff member responsible for intake procedures is: Can the homemaker program provide the appropriate help for the individual or family referred?

Homemaker service is often assumed to be a simple operation. This is far from so. The homemaker agency will generally encounter problems in the social welfare, home economics and health fields and will have to find solutions for them—not always easy in as unstructured a setting as the home—either through its own staff or through appropriate cooperating agencies. Assistance can therefore best be given if other supportive community services are available to the agency.

It is probable that homemaker service is now entering its greatest period of usefulness. Homemaker service to children and their families must be maintained and increased. One of the most immediate challenges facing homemaker service is the personal care to be given by homemakers; demands for personal care are increasing at a dramatic rate. If homemaker services are to be extended effectively to groups of older people and for children and adults disabled for various reasons, there must be a close partnership between the social welfare and health professions generally, and particularly between social workers and public health nurses. The needs—economic, social and emotional as well as for personal care—of applicants for homemaker service can only be met if the professional disciplines involved work together to evaluate problems and to determine effective solutions.

I—Success of a homemaker program will depend largely on how effectively the agency has defined its intake policies and how skillfully the need for its service is determined.

1. There should be clearly stated criteria of eligibility for the service.

2. Intake policies and procedures which meet the demonstrated need of the agency's community should be established.

3. Methods of referral from a broad spectrum of community sources should be developed.

4. All sources of information—family interviews and consultations with appropriate agencies, medical and social reports—should be utilized during the intake process in determining with the individual or family whether homemaker service offers the best solution for the presenting problem. The professional staff is responsible for evaluating the total need and assisting with alternate plans if homemaker service cannot appropriately or fully meet it.

5. The homemaker is accountable for providing responsible follow-through with the individual or family who seeks its service whether referred by a community agency or self.

6. Reasons for rejection or acceptance of the applicant for homemaker service should be interpreted to the individual or family applying and to the referral source. If accepted, a service plan to fit the special need should be developed and duties to be performed by the homemaker interpreted to the individual or family and the homemaker.

7. The homemaker agency should interpret its philosophy on cost of the service to potential users and referral sources. The cost, and methods of meeting it, should be made clear to each individual or family accepted for service whether the applicant meets the full fee-for-service payment or receives help on a part-pay or fully subsidized basis.

II—It must be recognized that even though a satisfactory plan for service has been developed during the intake period, it will need to change as the family situation does. Flexibility is a most important ingredient in an effective homemaker program. Without it, the service too often falls short of the agency's true purpose. The agency, therefore, should review and adjust the homemaker service to meet

the changing needs of the individual or family. In order to insure flexibility of care, certain policies must be carried out.

1. No arbitrary period of service should be established.
2. The placement of homemakers should be adjusted with regard to the amount and type of service necessary.
3. There should be a well worked out plan for termination of the service of the homemakers. This should include intra- or inter-agency referrals to assure the provision of necessary on-going or new services.

III—All recipients of a homemaker agency's help will need, to a degree, the same basic assistance in the maintenance of sound home values. There will be variations in the understanding and service necessary for special groups; e.g., children, the aging, the physically or mentally incapacitated.

1. Homemaker services which include child care should provide for evaluation and supervision of the home by a social case worker skilled and knowledgeable in child care practices and treatment.
2. Homemaker services which provide personal care should have a carefully worked out policy in relation to personal care practices. This policy should be established in cooperation with appropriate regulatory standard setting bodies and should be reviewed at least annually by a committee which includes physicians and public health nurses.
3. Homemaker services which provide personal care for the aging, handicapped children and adults, the chronically ill and the mentally disturbed should include both social and nursing evaluation and supervision in their plan. A social worker, skilled and knowledgeable in the problems of the aging and of individuals with disabilities, should be responsible for assistance related to maintenance, environmental and emotional difficulties. The plan for personal care to be given by a homemaker should be developed and supervised by a qualified public health nurse after the over-all and personal care plan for the patient has been discussed with, and approved in writing by, his physician.
4. The personal care required by the applicant should be within the ability of the homemaker to perform and consistent with policies of the agency.

Summary on Provision of Homemaker Service to Individuals and Families

Referrals to a homemaker program may come from within its own agency or from a broader spectrum of community sources. At the point of referral, the professional staff is responsible for accepting or rejecting the application. In order to do this effectively, the agency must establish criteria of eligibility for its service. If an application is accepted, a service plan to fit the special need should be developed, including individual payment arrangements, however the payment is met. There should be flexibility in regard to the provision of the service. The evaluation and supervision of the home situation by a social case worker with special knowledge of child care practices and treatment should be included when homemaker services are offered to children. Personal care practices of homemaker agencies should be established and reviewed by appropriate regulatory standard setting bodies. Both social case work and public health nursing should be included where, among other services, personal care is provided for a patient.

CHAPTER III

The Organization and Administration of a Homemaker-Home Health Aide Service

Homemaker service should be available to all persons who can benefit from it. How it is secured will depend largely on the size of the community, the auspices of available programs and, often, whether these programs are financed to help certain categorical groups; e.g., clients of public or voluntary social agencies, patients of a hospital or clinic, the blind, the aging or physically or mentally disadvantaged individuals and their families. Complicated metropolitan areas may best be served by a number of homemaker agencies which, without duplication, are prepared to meet special needs. There is, however, an emerging trend in several large and many small communities toward the autonomous agency prepared to offer service on a community-wide basis to a variety of groups.

Originally established as a division of multi-function family agencies —sometimes called "host" agencies—homemaker services, as indicated, are now developing under various auspices. Whatever the auspices, there must be a governing body responsible for the organization and administration of the homemaker program. This should be a board of directors in a voluntary, autonomous or "host" agency; it may be a board of county commissioners or supervisors or a board of welfare or health in an official program. Throughout the Code it is referred to as the governing body.

It is common procedure—where the homemaker program is either in an official or voluntary "host" agency—for the governing body to appoint an advisory committee or council to concern itself directly with the development of the homemaker service. Members of such groups should be broadly representative of the concerned and informed community. Although they have no legal status, these groups make a vital contribution to the agency through their understanding of administrative and service problems and their recommendations to the governing body. They also serve as effective interpreters of the agency's achievements and need for community support.

I—The homemaker agency should follow certain organizational rules.

1. A homemaker service should be established through planning by a group, broadly representative of the community, which has assessed existing community needs and resources and is prepared to focus its attention on the effective development of a homemaker program.

2. A homemaker service should be set up in an organized non-profit public or voluntary structure. It may be part of an agency with broader functions or an independent community agency under a separate responsible governing body.

3. The governing body of a voluntary agency is responsible for establishing the legal status of the agency.

   a. A constitution and by-laws should be drawn up; a Certificate of Incorporation obtained and filed with the appropriate Secretary of State.

   b. The tax exempt status of the agency should be established with the Internal Revenue Service.

4. The governing body—where the homemaker program is in a "host" agency—should appoint a group of individuals broadly representative of the community to focus its attention specifically on the homemaker service. This may be known as an advisory committee or council.

5. The governing body should be responsible for the selection and appointment of the executive of the agency, and should establish with him criteria for the selection of professional personnel, homemakers and other staff.

6. The governing body, with the executive of the agency, should determine the scope of the agency's policies and program.

7. The governing body should be continuously aware of all phases of agency operation and should be included as an active partner with the staff in carrying out the objectives of the service. It should be involved in studying problems which the homemaker service faces and in developing solutions for them.

II—The governing body should enrich the total program of the agency through the knowledge and skills of professional and lay individuals willing to serve on subsidiary committees.

1. The appropriate number of committees will depend on the size of the agency. It may be desirable, in a large agency, to have standing committees assigned to certain areas of agency operation; e.g., financing, development of program, staff education and inter-agency and broad community relationships.

2. The subsidiary committees should include representatives from broad sections of the community and not be limited to members of the governing body.

3. All committee activities should be focused on the specific needs of the agency and the problems of the individual community related to homemaker services.

4. The participation of community leaders on subsidiary committees should be one of the important avenues to community interest and understanding of the agency's program.

III—There is no royal road to financing. All by-paths leading to funds from any source, and in any amount, must be explored. It is true, at this time, that more funds, both from voluntary and tax sources, are available for homemaker service than at any previous period. It is important, therefore, that the governing body and its finance committee include members who know the giving pattern of the community, have conviction on the worthwhileness of the service and of fund raising for it, and the imagination and ability to locate and secure funds.

1. Every homemaker service which meets broad community need will require community subsidy.

2. An annual budget which covers the optimum operational needs of the agency should be prepared by the staff and approved by the governing body.

3. The governing body should undertake to insure sound financial support for the homemaker program on a continuing basis. Where the service has been initiated as a demonstration or through limited grants or contributions, there should be plans from the beginning for its on-going support.

4. The homemaker program should provide service, within the scope of its program, to people at all income levels. This service should be provided through fees-for-service from recipients, third party payments and subsidized assistance to users of the service who are not able to pay for it and for whom no

third party payment is available. Arrangements for purchase of service by third parties should be in writing and should be periodically reviewed and adjusted. Whatever the payment plan for service, all users and referral sources should be informed of its true cost.

5. The governing body should explore all possibilities of financial support for the homemaker service and determine which sources are most likely to be available for the type and size of program the community determines will best meet its current needs. It should be aware of the broad possibilities for funding available through demonstration grants from voluntary and official sources, shared support through matching grants on a Federal/State basis, single or continuing grants from appropriate foundations, contributions from local affiliates of national voluntary health agencies, allocations from united funds or community chests and last, but not least, fees-for-service from consumers and independent fund raising by the agency itself.

6. The governing body of all homemaker programs — state or county commissions, boards of welfare or health, or boards of voluntary agencies — should familiarize themselves on all possibilities for providing homemaker service through tax funds. When pending legislation will allow for improved financing and functioning of public agency homemaker programs, the voluntary homemaker agency has an obligation to support such legislation.

7. The governing body and the executive should adopt accepted methods of agency accounting, including those methods set up jointly by over-all national welfare and health councils to provide a uniform system of accounting.

IV—Under whatever auspices the homemaker program is established —public welfare or health, or their voluntary counterparts—there must be an executive responsible for the administration of the service; in a "host" agency he may be called a coordinator or supervisor. This role may be included in the duties of the one staff member available in a small county welfare or health department or voluntary community agency. It may be carried as a purely administrative function in an agency with broader scope, a large professional staff and many homemakers. Whether the agency is small or large, certain rules pertain.

1. The executive should head the organizational structure of the agency and be responsible for the operation of its program.

2. The executive should be responsible for recruitment, selection and employment of professional and clerical staff and ultimately of the homemakers.

3. All professional staff, clerical staff, homemakers, consultants and auxiliary personnel should relate directly to the administrative structure of the agency.

4. The executive should delegate appropriate responsibility to other agency personnel when such delegation increases the effectiveness of the program.

5. The executive should continuously appraise the homemaker program in order to make appropriate recommendations to the governing body regarding it.

6. The executive should maintain effective liaison with the governing body, should be prepared to interpret to this body the on-going details of the program and its developmental needs, and, in reverse, relay to the agency's staff the decision of the governing body on all appropriate matters.

7. The executive should be responsible for the fiscal management of the homemaker program at all levels of its operation.

8. The executive should interpret to the community the services available through the agency's program and its need for appropriate referrals for service and adequate community understanding and financial support.

V—Once the homemaker program is established it should search out ways to increase its usefulness. It cannot afford to stand still when the need of people for its service is so great.

1. The governing body and the executive should establish short and long range developmental goals for the agency in relation to community need for its service.

2. The governing body, executive and agency staff should establish standards for the carrying out of the agency's program, including quantity and type of service to be offered and methods of their financing.

3. Program of orientation and on-going education for the gover-

ning body, professional and clerical staffs, homemakers, consultants and volunteers should be developed.

4. There should be provisions for regular systematic evaluation of all aspects of the agency's program and structure as well as performance of its staff.

VI—Much of the success of a homemaker program will depend on how dynamic and effective the relationship is between the governing body, the executive and all other members of the staff. Adequate personnel policies and practices, thoughtfully worked out and adhered to, furnish a sound basis for such a relationship.

1. The governing body and the executive should determine what personnel policies and practices will make for the satisfactory performance of the agency's staff.
2. There should be a written manual in which specific job responsibilities, along with the personnel policies and practices appropriate to each job assignment, are clearly stated.
3. Standards in personnel policies set by professional associations and other organizations, with which both the professional and other members of the staff may be affiliated, should be recognized.
4. There should be planned arrangements for initial and regular comprehensive physical examinations for all staff members.
5. There should be a well defined, limited, probationary period for all staff. The probationary period for homemakers should include on-the-job supervision.
6. There should be clearly stated written policies for all staff on salaries, vacations, sick leave, pension plans and retirement.
7. Special consideration should be given to the insurance coverage necessary for all members of the staff of a homemaker agency: liability, accident, automobile, workman's compensation and unemployment insurance. Regulations on type and amount of such insurances will vary from state to state. Amounts of staff salary to be withheld for insurances, including social security and taxation, should be established with local offices of the State Insurance Commission, Social Security and Internal Revenue Services.
8. The plan for employment of homemakers as full or part time staff members of the agency should include fair employment

practices, payment for service, at least at minimum wage rates, and coverage by special insurances necessary to job assignment.

9. Personnel policies for all professional staff—whether the homemaker program is a division of a complex welfare or health agency or an autonomous agency—should be equivalent to those employment policies established at the highest level by any comparable welfare or health agency.

VII—The effectiveness of the agency's service program should be tested through regular systematic evaluation of all aspects of its activities. All available information related to its operation should be included in such a procedure.

1. The evaluation of the agency program should include consideration of the following questions:

   a. How well does the program fit into the health and welfare structure of the community?

   b. Are its objectives meeting community need?

   c. How effective are communications within the agency, with other agencies and with the community?

   d. What are the real or potential roadblocks which may be deterrents to the agency's effective performance?

2. An evaluation of the agency's program should be carried out by its staff at least annually.

3. It is essential for the agency's growth and development that a periodic evaluation by an unbiased outside appropriate professional group be carried out.

Summary of Organization and Administration

Every homemaker service, whatever its auspices, must have a governing body responsible for its total operation. Responsibilities should include establishment of the legal status of the agency, appointment of subcommittees, adequate financing of the program, selection of the executive, establishment of the scope of the program and development of the procedures. The governing body should approve criteria for selection of various members of the staff, including homemakers, and for personnel policies which will result in satisfactory performance of job assignments at all staff levels.

CHAPTER IV

The Staffing of a Homemaker-Home Health Aide Service

The governing body of a homemaker agency should entrust the operation of its service program to its appointed staff. This staff will differ in size according to the extent of the program. It is important, whatever the extent, that responsibilities be met in three areas, i.e., executive, supervisory and direct service. It was recognized in Chapter III of the Code that all three areas may, in a small agency, be covered by a single staff member and a small group of homemakers. The principles set forth in this chapter, on qualifications and functions of all types of staff necessary to a fully manned homemaker service, should hold whether the agency has a minimum or extensive program. The principles are applicable not only to professional staff; i.e., the executive, supervisors and professional staff members responsible for operation of direct service to recipients of the agency's help; they are also important to the homemakers, the clerical group, consultants and volunteers so necessary to a well organized homemaker program. Because the homemakers themselves are the core of the program, principles related to them are presented first.

I—The unique contribution of the homemaker program is the direct service given by the homemakers to people in their own homes. Major efforts of the agency are directed toward making this service meet the various needs of applicants for it. Obviously the success of the program depends to a large degree on both the quality and quantity of individuals recruited as members of the homemaker staff. It is generally assumed that most communities have a reservoir of woman power—men, too, make excellent homemakers in certain situations—that can be drawn on by a homemaker agency for such personnel. Often a beginning agency, or one limited in staff, will employ few homemakers and many of them on a part time basis. Nevertheless, since the need will probably increase for the service, the agency should establish at the beginning—and broaden as the program grows—an effective pattern of recruiting homemakers.

1. A sub-committee of the governing body, with the executive, should work continuously to establish an effective on-going program of recruitment of homemakers.

2. All appropriate means of communication should be utilized by the agency to attract homemakers to its program; e.g., case stories told on various news media; appeals to church, Red Cross, home nursing and PTA groups; requests to state employment offices; encouragement to homemakers themselves to spread the word.

3. Homemakers should be recruited either for full or part time service in accordance with the demands on the agency and the ability of the homemaker to meet full or part time job assignments.

4. Interpretation of personnel practices of the agency and job satisfactions should be emphasized in recruitment programs.

5. Individuals with special knowledge—different cultural background, languages, experience with various groups of children, older people, chronically ill—should be sought by agencies in order to provide a variety of understanding to meet special situations.

II—Once a potential homemaker applies to the agency, skill in deciding on her ability to perform necessary job assignments is of paramount importance. Many people who have worked only within the protection of their families, or on minor jobs, are inarticulate in the formal surroundings of an agency office. Often the more inarticulate ones, when acclimated, will make the best homemakers. The executive or staff member responsible for selection of the applicant as a homemaker will need to consider not only reference statements, attitudes and abilities observed initially, but, even more especially, on-the-job performance during the first work assignments.

1. A comprehensive initial interview with the applicant should be carried out by the executive of the homemaker service or a designated qualified assistant.

2. The homemaker should be chosen for a number of personal qualifications including her interest and concern for people, a warm out-going and pleasant personality, flexibility in, and objectivity toward, her work.

3. Reasons for the applicant's interest in the service should be explored in depth with emphasis on personal experiences that

have influenced the individual's application and her attitudes and feelings regarding potential recipients of her help; e.g., children, the aging or the sick.

4. Reference should be secured from other than family members: previous employers, clergy, doctors and personal friends.

5. Careful observation of the individual's attitudes and job performance should be carried on by the supervisor of homemaker service during the training and probationary period.

III—It is generally conceded that homemakers functioning under the supervision of the professional staff of a community agency should be mature women with adequate knowledge of food preparation, housekeeping procedures; good judgment, patience, considerable skill in human relationship and, hopefully, a sense of humor to help them meet all sorts of atypical situations in a home. It might well be added that for those involved in personal care for both children and adults, a strong back and some knowledge of body mechanics are assets. No standard has been established in the Code on a recommended age for homemakers since it is agreed that maturity is not necessarily related to years lived.

1. The homemaker should possess both good physical and mental health and should demonstrate maturity of attitude toward her work assignment.

2. The homemaker should demonstrate ability to work under supervision as an employee of the agency.

3. The homemaker should have had, or receive following her agency appointment, adequate training and experience in home management and in the care of children, the aging and chronically ill individuals in various disease categories.

4. The homemaker should be able to deal with minor emergencies which will arise on her assignment and to work under stress when a crisis occurs. She should recognize her limitations in meeting emergencies and crises beyond her ability to handle and be able to report them appropriately to her agency control.

5. The homemaker should be able to read, write, follow written instructions and to converse easily on the telephone.

6. The homemaker should be able to communicate orally with the family to which she is assigned and both orally and in writ-

ing with the agency representative to whom she is responsible. She should be able to maintain the statistical records appropriate to her job assignment.

7. The homemaker should understand and respect the need for confidentiality in regard to the details of her assignment, and the problems of the family involved.

IV—Most homemakers will need to increase their fundamental ability through the orientation, educational programs and supervision provided by the agency. It is important that from the beginning their idea of service not be limited by their own home experience and that they concede the right of individuals and families to self-determination in their own patterns of living. Certain homemakers may be happiest working with children; others enjoy the give-and-take possible with comparatively well older or handicapped individuals; and still others may believe that experience gained in the personal care of a valued relative or in hospital work prepares them especially for giving this type of service. Whatever their preference, their basic guidelines remain the same.

1. The primary responsibility of the homemaker should be to provide individuals or families with the assistance or care deemed necessary by the professional staff of the agency. The emphasis should be on home management and physical needs of the recipients of the service and, within the competence of the homemaker to observe, awareness of emotional climate.

2. The specific responsibilities of the homemaker should include those tasks essential to good family living, such as the routine home management generally undertaken by the natural homemaker, including such duties as necessary food preparation, house cleaning, laundry and on-going personal care of children and adults.

3. Responsibilities to be carried by the homemaker should be related to the total service plan of the agency for the individual or family involved and carried out under the direction of the professional staff.

4. The responsibility of the homemaker should be to assist individuals or family members to continue or improve standards of nutrition, housekeeping, child care and self care, thereby maintaining or contributing to family stability and order.

5. The responsibility of the homemaker should be to provide per-

sonal care, where indicated, to those with illness or disability, under the supervision of appropriate professional persons and as a support to the over-all medical treatment plan.

6. The responsibility of the homemaker should include significant observation of family functioning or problems related to the total service plan of the agency.

7. The responsibilities of the homemaker should include attendance at designated staff conferences related to her orientation and on-going education.

8. The responsibilities of the homemaker should include maintenance of appropriate work records with a realization of their importance to the total operation of the agency.

V—It should be recognized that all professional staff must have the qualifications in education and experience necessary for their job assignments, as well as the certification of professional associations in their particular fields. It is also important that staff members demonstrate leadership qualities and have vital concern for recipients of the agency's help and for maintenance of a favorable climate for the program in its community. The executive responsible for the administration of the program should meet all above requirements: he should, in addition, be qualified to perform the functions appropriate to his administrative responsibility.

1. The executive is responsible for the administration of the agency. He should be selected from a field identified and concerned with the particular goals of homemaker service and should have had adequate administrative experience in the management of a homemaker program or in a related field. Traditionally, he has been appointed from the field of social work, home economics or public health nursing. There is, however, room for experimentation in the appointment of executives for homemaker agencies. Many schools of public or hospital administration include in their curriculum and field work much of the learning content necessary for administration of a homemaker program, particularly if it is in a large autonomous agency.

2. The executive should have concern not only for the effectiveness of his own program, but also for the advancement, generally, of the homemaker field. He should establish sound intra-agency and community relationships and should work closely

with other professional and non-professional groups in his own program and in the broader community.

3. The administrative responsibilities of the executive have been further outlined in detail in Chapter III of the Code, which relates to the organization and administration of a homemaker agency.

VI—The supervisor of a homemaker program has an important role to play in the agency's operation. He is responsible for the effective performance of the homemakers and serves as liaison between the executive, the professional staff responsible for the service plan and the homemaker. The supervisor should have the qualifications and certifications of his professional field and considerable knowledge of administrative functions.

1. The supervisor of a homemaker service should be selected from a professional group identified with particular goals of homemaker service and should have the appropriate qualifications and certifications related to his field. Traditionally, this has been the field of social work, home economics or public health nursing.

2. The supervisor should have had sufficient practical administrative experience in an appropriate professional setting to carry the rigorous responsibility necessary in a homemaker service.

3. The supervisor should be able to plan and carry out a program of orientation, training, assignment to jobs and continued supervision of homemakers employed by the agency.

4. The supervisor should interpret to the employed homemaker staff their role and responsibilities both in regard to the agency which employs them and to the families they will serve.

5. The supervisor should evaluate periodically the homemakers' job performances.

6. The supervisor should maintain effective relationships and liaison between professional staff of the agency and the employed homemakers.

7. The supervisor should recognize when consultation with a professional discipline not generally involved in the agency's program would enrich the service to recipients and secure such help at the appropriate time and in adequate amounts.

8. The supervisor should utilize volunteers where such help would be productive and provide necessary auxiliary personnel.

VII—A large homemaker program, in addition to its executive and supervisory staff, will require the services of additional professional personnel to assist directly in carrying out the agency's plan for the individual or family accepted for service; and to correlate their needs with the duties performed by an assigned homemaker. These professional staff members may be social workers, home economists or public health nurses, according to the function of the agency and their particular job assignment. They should have the professional qualifications and certifications appropriate to their particular field of specialization. They should also have special orientation and experience necessary to help individuals and families accepted by the agency for service.

1. Professional staff members responsible for the designing and execution of a service plan for individuals or families should have the ability to evaluate referrals to the agency effectively. They should also be able to develop a service plan with the applicant to meet his need.

2. Professional staff members responsible for the service plan should also be responsible for helping the homemaker to understand the details of her particular job assignment and her role and duties during it.

3. Professional staff members responsible for the service plan should utilize the skills of other professions necessary in individual or family situations and work as team members with other professional workers, the homemaker and the individual or family.

4. Professional staff members responsible for the service plan should possess skills and knowledge related to the understanding of children, their individual needs and reactions and the importance to them of family relationships. They should be able to help families improve their methods of child care and household management as indicated.

5. Professional staff members responsible for the service plan should have skill and knowledge to deal with the broad range of problems where the focus of helping is on the aging, the blind, the retarded, the chronically ill, the physically handicapped or the emotionally disturbed in all age groups. They

should understand the importance of personal care as one offset to these problems and see that it is provided in adequate amounts under appropriate supervision and as a support to the over-all medical and social treatment plan.

VIII—It is imperative that the homemaker program be supplied with adequate clerical service. The number of such staff will vary according to the size of the agency. The agency's size will also condition the duties performed by the clerical staff.

1. The clerical staff should be at least graduates of an academically approved secretarial course with adequate knowledge of office procedures.
2. The clerical staff of the agency should be selected both for its ability to meet the public intelligently and for its clerical skills in maintaining records necessary to all divisions of the agency's program.

IX **(A)** It is improbable that any homemaker program can, or should, consistently provide, through its own staff, all the help needed by individuals or families to whom it is committed. Fortunately its service can be enriched in many areas by professional or lay consultants on an individual on-going, ad hoc or permanent committee basis. This help often will be given as part of the individual's own contribution to the field or, for small town or rural homemaker agencies, as an additional service performed by appropriate personnel in state or county departments of welfare, health, agriculture or education. The consultation available in cities, if the agency has the will to seek it out, is generally unlimited. Consultants can stimulate better methods of home management and dealing with non-professional staff; advise on statistics, provide legal advice; promote recreational, educational, psychological, speech, occupational and physical therapies for children and adults at home; and better nutrition adapted to therapeutic or cultural diet patterns. No progressive homemaker agency, in short, can afford to be without consultant services.

It should be noted that there is emerging, particularly in "host" agencies where a variety of consultants are regularly available, a policy for the agency to employ consultants on its own staff, either on a full or part-time basis.

Although certain consultation will be provided without cost to the homemaker agency, there should be exceptions to this. The agency

staffed predominantly by social workers will need continuing consultation in its personal care program from a public health nurse; in reverse the public health nursing agency should utilize skills of appropriate social workers in its homemaker activities. It is conceivable that in some communities an inter-agency exchange in consultation for such purposes may be possible: otherwise both types of programs will need to purchase such help either on a contract basis or through direct payment to individuals. Physicians, who review and approve procedures in personal care for an agency, or physicians, including psychiatrists, who provide consistent consultation necessary for the effective performance of the professional staff should be recompensed financially. The various individuals involved periodically in training courses for homemakers may also be paid for their consultation.

Consultation is available to homemaker agencies through several national programs concerned with the provision of this service. The Child Welfare League of America and the Family Service Association of America are pioneers in consultation to homemaker agencies throughout the country: although their member agencies have priority, under certain circumstances they extend their consultation to non-members. The Department of Public Health Nursing of the National League for Nursing includes consultation to its member agencies on home health aide services. The United States Department of Health, Education, and Welfare accepts broad responsibility for consultation on homemaker programs through four of its divisions; the Children's Bureau, the Bureau of Family Services in the Welfare Administration, the Division of Chronic Diseases in the Public Health Service and the National Institute of Mental Health. The National Council for Homemaker Services is prepared to advise on where appropriate consultation can be secured for homemaker services.

Guidelines for the inclusion of consultation in homemaker programs should be followed.

1. The consultation sought by the agency should be on a broad and imaginative basis and utilized to enrich the homemaker service with knowledge and skills not available to the agency on a consistent basis.

2. Consultants involved in the program of homemaker agencies should have the professional qualifications of their particular fields or have developed skills as lay individuals which make them appropriate consultants for the program.

3. Consultants in the homemaker program should have the understanding and ability to work appropriately with the professional or non-professional employees of the agency.

4. Consultants in the homemaker program should be, according to the need for their consultation, available on a planned continuing basis or for ad hoc or as needed purposes as special problems call for their special skills and solutions.

IX **(B)** The executive, supervisor and other professional members of the homemaker staff have a responsibility to interpret to consultants the reasons for their involvement and what is expected through their contribution. Consultants should be helped to understand what their participation will mean to both staff and recipients of the service. Every effort should be made to retain their interest and cooperation where their contributions enrich and increase the effectiveness of the homemaker service.

1. Consultants in a homemaker program should contribute their particular knowledge to the broad development of the service; such knowledge may include home management, legal advice, recreational, educational, psychological, speech, occupational and physical therapies; nutrition adapted to therapeutic and cultural diet patterns; and other special contributions outside the ability of the usual staff to offer. They may also be used to assist inexperienced staff to use their professional skills in relation to homemaker services; this is important in launching a new program.

2. Consultants in a homemaker program with special training skills should assist in the establishment and offering of the training program for homemakers and may be responsible in their particular professional areas for evaluating its execution.

3. Consultants in a homemaker program should be used to advise in individual situations where their particular knowledge and skill will be effective in diagnosing and solving the presenting agency or family problem.

4. Consultants in a homemaker program should be used to provide assistance, within their competence, either to the homemakers themselves or to families served on maintenance, environmental or emotional problems or other significant needs.

X **(A)** Whatever the organizational structure or placement of the homemaker service, volunteer participation, on as broad a base as pos-

sible, should be regarded as essential to the optimum development and functioning of the agency. Volunteers possess many skills needed by both the staff and the recipient of the agency's help. They complement staff effort through their fresh approach to problems. They serve as valuable interpreters of the agency's need for community support in understanding of function and financing.

1. The volunteer in a homemaker service should possess contagious enthusiasm and a zest for performing the task assigned.
2. The volunteer in a homemaker service must have faith in the work to be done and steadfastness in performing it, with an understanding of the time demanded in its performance.
3. The volunteer in a homemaker service should be willing to accept supervision from the professional staff and to demonstrate willingness to cooperate and to revise his own ideas to fit larger needs.

X **(B)** It is important that volunteers receive both orientation to the agency's program and on-going supervision in the activities assigned. Well planned, worthwhile opportunities for service should be offered—not "made work". They should be helped to realize that their contribution has significance in the total operation of the program. The volunteer should always be made to feel that his efforts are accepted by the agency with real appreciation of his potential and performance.

1. Volunteers in a homemaker service should be included extensively in the membership of subsidiary committees appointed by the governing body.
2. Volunteers should be used in ways determined as appropriate by the agency and should have proper understanding of both the agency's objectives and the needs of individuals served by it. They should not, however, replace necessary paid staff.
3. Volunteers should, if they demonstrate special skills in this area, be allowed to contribute to the community's knowledge of the agency with proper supervision of the factual material discussed.
4. Volunteers in the homemaker service should be used to render auxiliary help within the agency when they have proved capable of carrying out assigned duties.

5. Volunteers should be used as friendly visitors to the recipients of homemaker service only after they have demonstrated their sensitivity to the needs of others, their ability to relate to people in need and to maintain the same respect for privacy of the family as required of the homemakers and all other representatives of the agency in direct contact with families and individuals receiving help from it.

XI—There will be certain situations when additional personnel should be paid to augment the services of the homemaker. Such help may be needed for heavy housework, transportation to and assistance at clinics, baby sitting, while the homemaker is involved in more intensive service to children or an adult patient, and other duties either outside the responsibility or the competence of the homemaker to perform.

Summary on the Staffing of a Homemaker Service

Whether the agency is small or large, three functions are necessary for its operation; i.e., executive, supervisory and direct service provided by professional staff and homemakers. All three functions may be performed in a small program by one staff person and a limited number of homemakers. Principles outlined in this chapter, however, should allow for satisfactory staff performance in any size agency with any number of staff. Special emphasis is placed on the program enrichment possible through the imaginative and broad inclusion of consultants and volunteers. It is also suggested that in certain situations auxiliary personnel should be employed by the agency to supplement the work of the homemakers.

CHAPTER V

The Orientation and On-Going Education Program of a Homemaker-Home Health Aide Service

Every individual responsible in any way for the operation of a homemaker service—homemakers, members of the governing body, professional and clerical staff, consultants, volunteers—should receive comprehensive orientation on the purpose, function, organization and service objectives of the agency. Orientation should be followed by programs of on-going information and education geared to the developmental needs of the groups involved. Basic guidelines for such procedures are outlined in this chapter. It is not intended to describe in detail methods through which these guidelines are to be followed. Emphasis, however, should be placed on the formalized training possible for homemakers through extension or continuing education departments of certain state universities, vocational schools, the adult education and home economic divisions of local school systems and the training programs for homemakers established jointly by public welfare or health and voluntary homemaker agencies in certain communities.

I—Orientation and education of homemakers and all other divisions of staff should include certain basic procedures.

1. Orientation and on-going education for all staff, with basic training provided for homemakers, should be regarded as a means of developing skills and identification with the agency to help assure the quality of service.

2. All staff, at every level of homemaker service, should receive planned, purposeful orientation and on-going education for the service to be given. It is desirable that this be done in a group, when possible, to avoid duplication, overlapping or omissions in content.

3. Education of all staff should be directed and coordinated under one staff member.

II—Orientation and preliminary training of homemakers are important both to the individual employed and to the agency. Orientation should be provided for homemakers with all other members of the staff. Examples are given, in the introduction of this chapter, of certain community resources available for training purposes but there are many more to be found if homemaker agencies will explore the possibilities in their local communities. No homemaker, either for her own sake or that of the recipient of her service, should be assigned for home duty without orientation to the agency's program and a training period which covers the essentials of the service she must provide.

1. Orientation information and on-going educational procedures for homemakers should be outlined in a manual. This should include an outline of the content of training, methods of work and duties to be performed. The manual should be made available to each homemaker for continuing reference.

2. Homemakers should have training to provide adequate knowledge and skills as well as the confidence necessary for meeting their job assignment. They should also have job-oriented experience under the supervision of the appropriate staff member of the agency.

3. Homemakers should receive adequate special training where assignments call for special service as with care of children, the aging, the blind, chronically ill or emotionally disturbed individuals.

4. Homemaker agencies which provide personal care for the sick should also provide basic training, individualized instructions, supervision and evaluation of the homemaker's work by a qualified public health nurse.

5. Homemakers should receive periodic refresher courses in the general requirements of home management and in particular areas requiring special skills.

6. Individual needs of homemakers for training and on-going education should be provided through effective developmental procedures and supervision by the agency.

III—A governing body fully informed on agency problems and involved in the agency's direct operation will participate in its program with sound judgment and effectively discharge its responsibilities to the organization. One of these responsibilities is to offer job develop-

ment opportunities to all staff; another is to provide means for professional staff to share in whatever educational stimulation is available to the homemaker field — workshops, seminars, conferences — at local, state and national level.

Individual members of the governing body will have accepted appointment for various reasons. Some will have an understanding of the philosophy and management of a homemaker program before appointment: others will have to be initiated in all areas of its operation. The amount and kind of information made available to a newly appointed member should be geared to his specific experience.

1. New members of the governing body should receive orientation and information on agency procedures through participation in board meetings, agency programs and services. Written material related to the working of the agency and to programs in allied fields should form part of the orientation.

2. The governing body should receive specific information on total agency operation including programs past, present and future. This will help develop strong roots of interest, which, in turn, will provide a continuity to the functioning of the agency.

3. Once a member of the governing body has received basic information on agency operations, he should share in appropriate and well planned agency activities in line with his special interests and in order to help him develop his role of leadership.

IV—The effectiveness of a homemaker program depends to a great degree on the vital concern of the professional staff that demonstrated need be met with adequate service — and the skill with which they recognize the need and provide the service. There is no place in such a program for static thinking or complacency regarding established agency practices which do not meet the current needs of the community. It is imperative, therefore, that all professional staff be provided with up-to-date knowledge on homemaker services and secure for themselves whatever academic or practical experience will increase the value of their contribution to people served. In order to do this, educational guidelines for various divisions of the professional staff should be followed.

1. The governing body should be responsible for the provision of appropriate learning experiences for the executive and super-

visory staff in the homemaker field and in related programs of administration and community organization.

2. The professional staff should be provided with opportunities to have access to new developments in their fields of competence.

3. On-going education of the professional staff should include appropriate learning experience and consultation in child care, household management and health procedures necessary for medically and psychiatrically involved groups. When such experience is not available within the agency itself, the executive should provide opportunities for securing it through whatever educational means are most appropriate.

4. The entire staff of a multi-function agency should be provided with knowledge of the homemaker service in all its particulars as part of staff development and, in reverse, the homemaker staff should be knowledgable about all the components of the agency's program.

V—The principles outlined for the clerical staff should provide the basis for a competent secretarial and recording design. All staff members should realize that the clerical group performs essential services for the agency. The clerical staff should be given ample opportunities to increase their usefulness.

1. All members of the agency's clerical staff should receive orientation and on-going education on the purpose, philosophy, policies and functions of the agency and in regard to its place in the community's health and welfare structure.

2. Emphasis should be placed on the importance of the performance of the clerical staff both in promoting the efficiency of the professional staff and in creating a good public image for the agency through knowledge of its procedures and of the program as a whole.

3. All members of the agency's clerical staff should receive continuous in-service training through planned meetings in areas of concern and interest to the clerical staff alone. They should also participate in general agency meetings concerned with changes or new developments in the agency's policies.

VI—A broad use of appropriate consultation will enrich the program of the homemaker service in many areas. Consultants will offer

their best help if they are provided with all necessary facts concerning the agency's operation. Many of them will come from fields already associated with the efforts of homemaker services and these will not need extensive orientation and education regarding the intent and scope of the program. Opportunities, however, should be given to all consultants to review, with responsible agency staff, matters which will make their contribution effective.

1. Consultants included in the homemaker service should understand the purpose, philosophy and function of the agency as a whole.

2. New consultants or those used on a "one-time" basis should be briefed on the purpose, philosophy and function of the agency through a period of orientation and should have adequate time and opportunity provided them for this reason.

3. Consultants should understand the characteristics of the homemaker, her service role, training and skills, as well as her relationship to her professional supervisor, the agency and other members of the treatment team and the family to which she is assigned.

4. Consultants affiliated with the homemaker service on a continuous basis should attend, at least occasionally, homemaker staff meetings and homemaker training sessions, preferably as a participant in the educational aspect of the discussions.

VII—It has been stated in Chapter IV that volunteers should be given a prominent place in the program of a homemaker service. The professional staff should recognize the importance of contributions of volunteers in many areas of the agency's program. They should be willing to provide knowledge and experience necessary for the growth and development of the volunteer's effort and to accept the limitations of individual volunteers on certain assignments.

Volunteers should receive orientation and training consistent with their special assignments and supervision based on their individual needs.

Where intelligent selection and adequate developmental procedures are established for them, volunteers will enrich the service in many areas not covered by other personnel of the agency.

Summary on Orientation and On-Going Education in a Homemaker Program

Every individual associated with a homemaker program should have comprehensive knowledge of its purpose, function and objectives. This will be achieved if there is effective orientation, basic and on-going education provided for members of the governing body and all staff.

Homemakers should have a carefully planned training course before assignments to jobs. They should be given opportunities for continued learning through on-the-job teaching and professional supervision.

CHAPTER VI

The Records of a Homemaker-Home Health Aide Service

Records of a homemaker service constitute in a very real sense the keystone of its total program. It is imperative, therefore, that from the beginning the governing body and the executive of the service anticipate what detailed recorded facts will be important to its growth and development. Too often, in the enthusiasm of organizing a new program, the setting up and maintaining of an adequate record system has been deferred. The resulting hiatus in factual information on agency achievement has proved a roadblock to the community's understanding of the purpose, function and need for financial support of the program. Responsibility for planning for collection of adequate recorded data rests with the executive, but, if the record system of the agency is to have significance, all other members of the agency staff, including homemakers, must contribute facts appropriate to their particular job assignment.

Recorded data enables an agency to have current quantitative information about its own activities, provides the means for comparing its program with other agencies', furnishes the means for studying service trends from year to year or any designated period of time, allows for specialized data which can furnish leads into qualitative evaluation of the program and may be the basis of statistics required for local, state, regional and national purposes.

A record system will be most effectively organized and maintained if there is a manual on homemaker agency recording which provides guidelines for this purpose. It is regrettable that no such over-all manual on recording exists. There are available, however, through several individual homemaker programs, manuals of recording principles and these can be secured through application to the individual agency involved. The purpose of the guidelines on records in the Code is to establish minimal record standardizations desirable for comparability in measurement, evaluation and interpretation of services. Because some homemaker services are in public health or welfare or voluntary "host" agencies and

others are independent organizations, a flexibility in the standardization is suggested to permit all agencies, regardless of auspices or size, to find the essentials needed for the gathering of data for administrative purposes.

Four areas of recording are recognized as minimum for adequate statistical interpretation of a homemaker service: (I)—intake, (II)—service, (III)—personnel and (IV)—finance. The data to be secured through these four classifications should provide the information necessary for interpreting the agency's program at all levels of operation.

I—All identifying information related to the applicant for service should be recorded during the intake procedure. This information will form a base for the establishment of service or whatever action is deemed necessary for the applicant. Statements on reasons for referral to the homemaker agency, with all available verbal and written medical and social reports on the family or individual involved, should be recorded as part of the intake procedure. The executive, supervisor and other professional staff of the homemaker service should share in the setting up of record outlines to cover adequate intake procedures.

II—Case records should be maintained on the service given to each family or individual by the homemaker agency.

1. Records should be kept of the particulars of the service given to meet the need of a family or individual accepted for help: the purpose of the service, plan for implementing it, and how it was used, should be stated.
2. The service records should include reports on joint planning with other community agencies or with consultants either inside or outside the agency.
3. Records should include statements on reasons for termination and evaluation of the service given.

III—A written record on each staff member employed by the homemaker program, including homemakers, should be maintained on a current basis. Information contained therein should be considered in staff evaluations for promotion, increases in salary and other increments available to the staff.

IV—The homemaker agency should maintain records on all appropriate financial matters including expenditures of funds provided

through various government and/or voluntary sources, statistics on both measurement of and expenditures for service, expenses met on a non-cash or donated basis and indirect expenses relating to operation of the homemaker program.

1. An appropriate statistical unit for the measurement of service should be established along with the total expenditures by type of expense. Statistics on both measurement and expenditures should be available from records maintained on its finances by the agency.

2. Expenses met on a non-cash or donated basis for such items as office space, salary equivalent for volunteer time or materials should be included if essential to the operation of the agency and for which the agency should have had to pay if they had not been donated.

3. All indirect expenses should be recorded, including administrative and clerical salaries; office expenses such as rent, telephone, supplies, insurances, publicity and other expenses of a similar nature which are necessary for the operation of the service. These expenses should be included in the true cost of the homemaker agency's operation.

V—Data obtained through the four minimum record classifications (intake, service, personnel and finance) should provide sufficient information for an adequate picture of the agency's operation.

1. There should be an accurate record of applications for service received and disposition of each application, i.e., whether it was accepted or not accepted and if not, the reason for refusal.

2. There should be an accurate record of applications pending.

3. There should be an accurate record of cases carried over from a previous recording period.

4. There should be an accurate record of cases added during the previous recording period analyzed under the following headings:

   a. No previous service given by the agency to the applicant

   b. Previous service given to the applicant in the current recording period

   c. Previous service given to the applicant prior to the current recording period

5. There should be an accurate record of cases active and of those closed at the end of a designated recording period.

6. There should be an accurate record of the number of individuals served by the agency.

7. The homemaker records should show:

   a. The number of hours of service given by homemakers

   b. The number of homemakers employed on a full or part time basis

   c. The number of supervisory and other staff according to job assignments

8. The governing body and the executive should maintain all financial records in such form as to clearly state the amount of money spent, the current financial problems and future needs in financing to provide the service to which the agency is committed.

Summary Statement on Records

The homemaker agency, from its very beginning, must maintain adequate records on all aspects of its program. The executive has a responsibility to plan the record program and staff members at all levels of operation are obligated to contribute statistics related to their individual job assignmets. Records should be maintained on four areas of agency operation; i.e., intake, service, personnel and finance, including cost accounting. Data to be obtained through the four above record classifications should provide sufficient information to allow for an adequate picture of the agency's program and operation—both service and fiscal.

CHAPTER VII

The Role of the Homemaker-Home Health Aide Service in Community Relations

John Donne said, "No man is an island . . . ". His statement could well be paraphrased and applied to any health or welfare program in a modern community. It has particular significance for a homemaker agency which, because of the nature of its services, is dependent on community cooperation in most areas of its program. A homemaker program, from its beginning, should, as a fundamental responsibility, be an integral part of the local system of public and voluntary services. It should be closely related to and involved with the total welfare and health resources of the community. The principles related to its effective integration with such welfare and health services are stated in this chapter. Many of the principles listed apply to all responsible social welfare and health agencies and are not unique to homemaker services. Such principles are, moreover, applicable to both the independent homemaker program and the program in a "host" agency—whether the "host" is a public welfare or health department or a voluntary community supported organization. Auspices, however, will influence to a degree by whom and how the principles are implemented.

The two general categories under which principles are presented are (I)—Broad relationships as part of the complex of community services and (II)—Working relationships at the direct service level.

I—The homemaker agency should participate actively as a member or affiliate of the local planning council or similar organizations. Where there is no central planning body, the agency should develop a comprehensive formal or informal planning process in order to assure appropriate relations to, and involvement with, the community's welfare and health resources.

1. The homemaker agency should establish community priorities for its service and programs.

2. The homemaker agency should insure community awareness of gaps in services as evidenced through its own experiences with individuals and families who need additional or different services than those provided by its program.

3. The homemaker agency should receive and provide consultation, through appropriate individuals and other effective means, on the development of homemaker programs. It should participate in projects designed to demonstrate need for, and the values of, homemaker services.

4. The established homemaker agency, where appropriate, should actively participate in shaping public agency welfare and health policies related to homemaker services and other identified welfare and health needs.

5. The homemaker agency should make available information on its service to appropriate community planning groups which can further its program, e.g., local committees, local or state welfare or health councils or planning commissions.

6. The homemaker agency should encourage broad volunteer participation in its activities with the realization that community involvement is one means of developing public understanding of its program and should form the base of its community relations.

7. The homemaker agency should assess all communication resources available within the agency itself and in the community, in order to determine what avenues will be most effective in reaching various segments of the community identified as important to it. It should establish effective contact with all news media and enlist their interest in presenting a favorable image of the agency's achievements and needs to a broad cross-section of the public. Materials which interpret the goals and achievements of the homemaker service should be prepared by the agency for the use of all communication channels.

8. The homemaker agency should establish short and long range goals in its interpretative efforts. It should make planned efforts to learn how the community evaluates its current services and what additional services various segments of the community desire the agency to provide.

9. The homemaker agency should maintain active and effective relationships with local, state and national standard setting and/or membership organizations.

II—The homemaker agency has a responsibility to interpret homemaker service as an organized, professionally supervised and community supported program. It should make known the agency's specific program, philosophy on fees, intake policies and limitation of service, as such interpretation is essential in order to obtain community sanction, appropriate use of service, financial support and recruitment of staff and volunteers. To achieve these ends, the agency also needs to maintain effective relationships with social welfare, health and mental health agencies which will be sources of referral to and from the homemaker agency.

1. A homemaker service which provides broad community coverage will, in general, be more responsive to over-all community need than a service organized for a narrowly selected group; e.g., individuals with special physical disabilities, or the clientele of a "host" agency. At the start of a new service or in plans for further development, the agency should relate its proposed variation or expansion of program to demonstrated community need and agreed on community priorities.

2. The homemaker agency should be accountable to the community for the quality of service it renders. Its accountability should include provision for a qualified staff, adequate to meet basic service requests and to provide the community service it purports to render.

3. The homemaker agency is responsible for evaluating the need of the applicant for service and assisting the individual or family with alternate plans if the presenting problem cannot be fully or appropriately met by the homemaker service.

4. The homemaker agency has a responsibility to report back to all referral sources, whether they are community agencies, physicians, lawyers or other concerned individuals, and to maintain continuous communication with any agency concurrently active with the family receiving homemaker service.

5. The homemaker agency should develop clear and explicit agreement on the responsibility of each agency where cooperative services are involved. Since no homemaker program can give all the service necessary to disadvantaged individuals or families, there must be supporting community services if all needs of individuals or families involved are met.

Summary Statement on Community Relations

The homemaker agency is dependent on various sections of the community for the success of its program. It should therefore establish itself from the beginning as an integral part of the local system of public and voluntary welfare and health services. To this end, it should maintain broad relationships at the direct service level. It should participate actively in interpreting and promoting the interests of its own program and of the homemaker field. It should also call attention to, and offset where possible, deficits in community services which prevent its optimum help to people. Agreements with cooperating agencies should be clear and kept up-to-date. Volunteers should be involved extensively in the agency's program. All channels of communication should be utilized to interpret the program and needs of the agency and the importance of homemaker service to the community.

HONOR ROLL

MEMBERS–COMMITTEE ON STANDARDS

Mrs. Asher Yaguda, *Chairman*
Board Member
National Council for Homemaker Services

Mrs. Mary Elizabeth Bauhan
Consultant Statistician
New Jersey State Health Department

Jack Brauntuch

PREFACE

The rapidly increasing complexity of business and industry operation has brought to the attention of local, State, and National leadership the need to provide a comprehensive program of Vocational Education as a part of the educational system.

State and local leaders throughout the Commonwealth have been meeting this challenge through enabling legislation encouraging the organization, establishment and operation of area vocational-technical schools on a regional basis.

This brochure gives a brief report on the progress throughout the Commonwealth in the development of area vocational-technical school programs from the initial stage of attendance area development to the programs which will begin operation in September 1967.

THE ATTENDANCE AREAS

The area vocational-technical school is an educational institution offering programs in one or all phases of vocational education on a technical, skilled, and occupational levels of instruction to secondary school pupils and out-of-school youth and adults in a geographical area comprised and operated on a cooperative basis by several school administrative units.

The basic purpose of the area technical school is to make vocational education available to all pupils of the Commonwealth by the establishment of programs to serve secondary schools in a given geographical area known as attendance areas. Attendance areas, therefore, outline the geographical boundaries of school districts and pupils to be served by an area vocational-technical school.

County Boards of School Directors have been delegated the responsibility to plan, prepare, and submit to the Department of Public Instruction proposals for arranging all school districts of the county into one or more attendance areas. These proposals are developed in counsel with school administrators, industrial, labor, and lay representatives of the area.

An attendance area school should have sufficient number of school districts to maintain a minimum of ten shop/laboratory activities. This requires a senior high school pupil enrollment of approximately 2500 pupils. Factors considered in planning areas include pupil population, community interest, facility of transportation, financial ability, organization of school districts, characteristics of school districts, etc. Attendance areas must be approved by the Department of Public Instruction and the State Board for Vocational Education before proceeding with the establishment of a school in the area.

CHARACTERISTICS OF APPROVED ATTENDANCE AREAS

1. A total of seventy-seven (77) have been approved including those areas having schools in operation, covering fifty-five (55) counties.

2. Sixty-eight (68) attendance areas have been approved since February 1964, under Act 463.

3. Sixteen (16) counties have more than one attendance area:

Allegheny (4)	Luzerne (3)	Chester (2)
Montgomery (4)	Bucks (3)	Cambria (2)
Westmoreland (4)	Northumberland (2)	Fayette (2)
Delaware (3)	Northampton (2)	Dauphin (2)
Berks (3)	Washington (2)	
Lancaster (3)	Schuylkill (2)	

4. Seven (7) attendance areas involve major portions of more than one county:

Columbia-Montour	Venango-Crawford-Forest
Juniata-Mifflin	Snyder-Union-Northumberland
Cumberland-Perry	Cameron-Elk
Clarion-Forest	

5. Ten (10) attendance areas are below the minimum standard of 2500 pupil enrollment.

   Greene, Bedford, Warren, Clarion-Forest, Upper Bucks, Clinton, Monroe, Huntingdon, Cameron-Elk, Fayette #2

6. The average senior high enrollment per attendance area is 5100 pupils.

Counties and Pupils Not Served by Approved Attendance Areas

County	Estimated Senior High Enrollment

EDUCATIONAL PROGRAM PLANS

The basic purpose of educational program plans is to prepare and justify program size and course offerings. The educational program plan is developed by the local Director of Vocational Education in cooperation with the professional and general advisory committees and field Supervisors of Vocational Education. Preliminary draft plans are reviewed, revised, and presented to the Department of Public Instruction for review and approval of a curriculum committee. The educational plan is used as a basis for drafting a room schedule in preparation for planning a building facility.

Summary of Facts Concerning Educational Plans

1. Total number of educational program plans approved is forty seven (47).

2. Twenty-three (23) of these programs are located in the Eastern Region of the Commonwealth, twelve (12) in the West, and twelve (12) in the Central.

3. Thirty-five (35) programs are County Board operated and twelve (12) Joint Board.

4. Ten (10) programs are being planned as full-time schools and thirty-seven (37) as part-time service centers providing only the shop/laboratory phase of the program.

5. The average pupil size of school is approximately 885 pupils.

6. The average number of course offerings is twenty-one (21).

7. The average percentage of proposed enrollment of technical school pupils to total enrollment of senior high school pupil in the participating districts is 17.9%.

AREA VOCATIONAL-TECHNICAL SCHOOL
APPROVED EDUCATIONAL PORGRAM PLANS
AND
ATTENDANCE AREAS WITH PROGRAMS IN OPERATION
July 1967

Shaded areas indicate Area Vocational-Technical Schools in Operation.

Cross-Hatching indicates areas with approved Educational Program Plans for Area Vocational-Technical School.

Tie indicates a multi-county attendance area.

BUILDING CONSTRUCTION

Planning and construction of building facilities evolves from the preliminary steps of planning an attendance area, development of an operating administrative organization for the school, planning the educational program, planning the building, and construction of the building. Adequate planning of program and facility requies a minimum of one year, and one to one and one-half years to construct the building.

BUILDINGS CONSTRUCTED AND FUNDED

The building projects listed began construction in the fiscal years indicated. The equipment cost is included in the total cost of the project and is not an addition to this cost.

	Pupil Capacity	Equipment Cost	Const. Contract Awarded	Total Cost of Project	% Cost Eligible for Reimb.	Allocation: Vocational Ed. Act of 1963	Federal Funds: Appalachian Regional Dev. Act
1964-65

About the Author

The author, Emil A. Mesics, has been interested and involved in training in industrial, business, and other organizations since his entry into the field in 1942 as Training Director at the Harrison, New Jersey plant of the Radio Corporation of America. Subsequently, he served as Staff Training Director at Macy's, New York, as Director of Management Development and Training at the Otis Elevator Company, and as Director of Personnel for the RCA International Division. In his various assignments he was responsible for initiation, development, and administration of training programs for employees at all organizational levels. He has been an active member of the American Society of Training Directors. He is currently serving several major companies as consultant on employee and management training.

Professor Mesics joined the faculty of the New York State School of Industrial and Labor Relations as a Visiting Professor in 1955 and was appointed Associate Professor in 1958. His special areas of interest at the resident instruction and extension teaching levels include courses in design and administration of training programs, personnel administration, and management development.

Professor Mesics graduated from Muhlenberg College in 1928, received the M.A. degree from Bucknell University in 1936, and pursued further graduate study at Pennsylvania State University.

I. INTRODUCTION

The mounting volume of literature appearing in a wide variety of business, industrial, and professional journals, and in book form, reveals a continued interest in formal training in organizations. For this annotated bibliography the various sources available in the Library of the New York State School of Industrial and Labor Relations have been culled for those titles which are substantive and represent basic information which the student or practitioner can draw on profitably. This publication is a revision and updating of earlier bibliographies in the subject area which have been distributed by the School, and covers the period to the end of 1963. The student can find sources here of historical and developmental importance in the field; the practitioner can find references to apply to his current training problems.

As we review the earlier bibliographies and the content of this one, the titles appear to show the evolutionary changes in emphasis which have occurred in organizational training and in the literature of training. In 1948 and 1952 respectively, the School published Extension Bulletin No. 1 and Bulletin No. 20, both of which were titled *Industrial Training: A Guide to Selected Readings.* As the title suggests, the citations reflected that interest and activity in training were localized largely in industrial operations. By the time *Training in Organizations* was published in 1960, the literature showed evidence that training methods and techniques were being extensively utilized in government agencies, banks, retail stores, and in public service organizations. Although references to training in factories, shops, and offices still made up a substantial number of the several thousand titles reviewed for this volume, even broader areas of study and application were becoming apparent. One important new dimension in the writings has been concern with how training can be related to local and national problems associated with employment security. An abundance of literature has been devoted to vocational training at the secondary school, technical institute, and college levels, and also to retraining and continuing education to deal with the effects of skill obsolescence. Thus the current title, *Training and Education for Manpower Development,* reflects the broader subject coverage of books and articles.

In addition, the review of current articles and books reflects a vital change in the emphasis and direction of training. There has been an

increase in the number of articles dealing with various aspects of management development. These range from descriptive pieces about on-going activities to articles which are clearly critical of the very concept itself. It is evident that much attention is being accorded the methods used to meet the demands for qualified supervisory and managerial manpower.

Managers, trainers, and those who write about training have also been preoccupied with programmed learning. Even after we culled out those articles and books which were clearly repetitive, there remained a substantial volume of items dealing with the conceptual origins of programmed instruction, as well as with applications at the manual skill and cognitive skill levels. This is the major new experimental training technique which has been added to the extensive list of tools for training.

There has also been a change in the quality of inquiry and research, as well as writing in the field. There are fewer articles describing step by step "success" stories than in previous years. More articles reveal efforts at systematic inquiry and research about learning theory and the application of learning theory to the resolution of organizational problems. Our review of the literature suggests that there has been a definite upgrading in the caliber of personnel engaged in the training function in organizations and in writing about it. In this connection it should be noted that a substantial number of items are the work of university men who are actively involved in the study of organizational training matters.

All the indexes and other sources available for the period 1960 to 1963 have been reviewed for those references which appeared to have relevance either for application or for research. The problem faced was to determine what to exclude in order to keep the listing essentially complete while trying to avoid a volume of excessive size. Frequently a clear choice had to be made among several references of comparable high quality. We sincerely hope we have not done injustice to those authors whose works are not included.

The organization of the selected readings follows a sequence from general to specific subjects. Some references are cited in more than one section, when appropriate subject matter warrants such cross reference. For the reader's convenience, each major heading has been subdivided into several minor subject areas. The material is structured as follows:

Training, General — Status of the Training Function, Role of the Training Specialist, Identifying Training Needs, Instructional Methods, Organization for Training, Basic Texts on Training.

Work Skill Training — Employee Orientation, Skill Development and Improvement, Office and Clerical Employee Instruction, Retraining, Vocational Education, Apprenticeship—U. S., Apprenticeship and Skill Training in Foreign Countries, Sales Training.

Technical and Vocational Training — Role of the Technician in Industry, Institutional Training Resources, Technical Training in Foreign Countries.

Supervisory Training — Identification of Supervisory Training Needs, Structure of Training Programs, Job Instructor Training, New Supervisor Training, Supervisory Selection.

Management Inventory and Executive Development — Methods and Techniques, Performance Appraisal, University Programs, Manager Development of Foreign Nationals, Liberal Arts Programs for Executives, Critiques of Management Development.

Training Techniques and Methods — Conference Discussion Leadership, Sensitivity Training, Simulation and Business Games, Role Playing, Case Study Techniques and Incident Process, Programmed Learning, Miscellaneous.

Training Evaluation
Bibliographies

The annotations are not intended to be précis of the books or articles, although they reflect the substance covered for ready reference. In some instances we took the liberty of making evaluative comments and suggestions concerning the use the reader might make of the material. We hope that the annotations do no violence to any author's intentions, but rather that they serve the reader as a guide in his quest for principles, ideas, methods, and techniques. The author assumes full responsibility for the list of citations in the volume and for the annotations. They reflect his best judgment and perhaps his prejudices as to what represents the most vital available contributions to the literature of training. In making the selections we tried to keep the needs and interests of the variety of potential users in mind. The soundness of our judgment will be determined by the usefulness of the bibliography to its readers.

We encourage readers to call our attention to omissions of important items. Such response to earlier volumes has been valuable. It is our purpose to keep the compilation up to date in the future and all suggestions will be appreciated.

The author is indebted to Allen Torpie, Gary Hansen, James Belasco, graduate students; and Andrew Abraham, undergraduate research assistant, for their work in searching the indexes for titles to be considered for inclusion, and for their editorial contributions. Any omissions, however, are to be attributed to the author and not to his collaborators.

Bibliography

II. TRAINING—GENERAL

A. STATUS OF THE TRAINING FUNCTION

1. American Management Association. *How to Establish and Maintain a Personnel Department* (3rd ed.) sec. 5B, Report 4. New York, 1953.

   A comprehensive description of the design and administration of the training function as part of the personnel department. Covers training objectives and plans for organization of the function.

2. BELMAN, HARRY S., and JOHN E. BLIEK. "The Nature of Current Training Function Activities." *Journal of the American Society of Training Directors:* Vol. 15, No. 2, February 1961, pp. 31–46.

   This is a summary article based on a survey of the status and functions of training departments in business, industry, and government. Describes the kinds of training programs and other activities carried on by the responding establishments.

3. ———. "Organization and Structure of the Training Function." *Journal of the American Society of Training Directors:* Vol. 13, No. 8, August 1959, pp. 21–28.

   This article, in the series reporting a survey of the training function, concerns itself with where the function reports in the organization and the kinds of assignments it carries out.

4. ———. "The Training Function Budget." *Journal of the American Society of Training Directors:* Vol. 13, No. 11, November 1959, pp. 36–48.

   This report of the training function concerns itself with responsibility for the training budget in business, industrial, and government organizations.

5. ———. "Training Departments in Business, Industry and Government." *Journal of the American Society of Training Directors:* Vol. 12, No. 9, September 1958, pp. 45–53.

   First of a series of articles studying the distribution, status, and role of the training function in industry. This article deals primarily with geographic distribution, as well as incidence of formal programs by company size and company product or service.

6. BUCHANAN, PAUL C. "The Function of Training in an Organization." *Journal of the American Society of Training Directors:* Vol. 14, No. 4, April 1960, pp. 53–63.

The author writes a scholarly piece proposing a method to aid the industrial trainer or any "agent of change" in an organization in carrying out the changes needed in the organization. The article emphasizes the importance of knowing the basic concepts of organizational theory in order to facilitate efficient accomplishments of any required adjustment within the organizational framework.

7. CUNNINGHAM, J. W. "Enlargement and Professionalization of the Training Function." *Journal of the American Society Training Directors:* Vol. 14, No. 6, June 1960, pp. 11–15.

A searching look at the present and future status of training, pointing out the needs which training must adequately fulfill and the direction training must take in order to realize its full growth potential. An interesting commentary is given concerning the professional recognition of training.

8. DePHILLIPS, FRANK A., WM. M. BERLINER, and JAMES J. CRIBBIN. *Management of Training Programs.* Homewood, Ill.: Richard D. Irwin, Inc., 1960, 469 pp.

This book attempts to identify the function of training as an integral part of management theory and practice. Through the use of case studies, examples of training problems, and application of learning theory, the authors have addressed themselves not only to the methods and techniques for training but have presented the subject within a framework of theoretical conceptualization. A valuable addition to the literature of training, an important value of which is that essential issues are raised about the fundamental role of training in organizations.

9. LIPPITT, GORDON L., and LESLIE THIS. "Is Training a Profession?" *Journal of the American Society of Training Directors:* Vol. 14, No. 4, April 1960, pp. 3–10.

Defines standards and criteria for a profession and evaluates the training function accordingly. Suggests that professionalism will be a step nearer when trainers become learning theorists rather than only training methodologists.

10. MORGAN, HOWARD K. *Industrial Training and Testing.* New York: McGraw-Hill, 1945. 225 pp.

This book presents attitudes toward training, and describes training activities during World War II when the function was gaining a foothold on the industrial scene. Serves to demonstrate the progress made in the field from those origins to programs described in current literature.

11. SERBEIN, OSCAR N. *Educational Activities of Business.* Washington: American Council on Education, 1961. 180 pp.

Reports a research study on the scope and content of training and educational activities in U. S. industry. Describes the role of training in organizations and relates it to education for business at the institutional level. Extensive data is presented from the inquiry.

12. SCHEER, WILBURT E. "What's Ahead—In Personnel and Training." *Personnel Journal:* Vol. 39, No. 4, September 1960, pp. 126–129, 142.

Personnel administration and training are areas of management displaying a rapid rate of change. After describing how personnel administration and training began, their present status, and where these functions are going, the author specifies the type of manpower needed to fill the positions in these growing functions.

B. ROLE OF THE TRAINING SPECIALIST

13. BELMAN, HARRY S., and JOHN E. BLIEK. "The Head of the Training Function." *Journal of the American Society of Training Directors:* Vol. 13, No. 2, February 1959, pp. 42–53.

Article reports survey results bearing on the activities, relationships, and responsibilities of the person identified as the head of the training function in industrial and other organizations.

14. ———. "Job Opportunities and Status of Training Personnel." *Journal of the American Society of Training Directors:* Vol. 14, No. 5, May 1960, pp. 40–50.

A critical analysis of the opportunities for career development in the training field and the possibilities for lateral transfer and individual growth in organizations.

15. DAMERELL, LORETTA. "Who Wants a Training Job?" *Journal of the American Society of Training Directors:* Vol. 17, No. 1, January 1960, pp. 36–39.

Discussion of some of the problems that will face training directors and training specialists in the future. Changes in job and labor force composition and in organizational structures are discussed in reference to their effect on methods of training and communicating. Necessary capacities of training directors are also treated.

16. LERDA, LOUIS W., and LESLIE W. CROSS. "Performance-Oriented Training: Program Implementation." *Journal of the American Society of Training Directors:* Vol. 16, No. 6, June 1962, pp. 22–29.

One of a series of articles addressed to managers and training specialists delineating the appropriate roles of each in the

process of meeting the learning needs of an organization.
See also by the same authors: "Performance-Oriented Training," *Journal of the American Society of Training Directors:* May 1962; "Training Experimentation and Improvement," *Journal of the American Society of Training Directors:* April 1963.

17. MAHLER, WALTER R. "A Critical Look at Training in American Industry." *Journal of the American Society of Training Directors:* Vol. 16, No. 12, December 1962, pp. 3–10.

    The author has long been a constructive critic of training in industry. In this article he addresses comments to training demands of a changing technology and their implications for the training specialist and his management.

18. SARTORIOUS, HARVEY A. "The Rise and Fall of the Training Director." *Journal of the American Society of Training Directors:* Vol. 13, No. 4, April 1959, pp. 16–22.

    This perceptive article focuses on the legitimate role of the training specialist in the development of an organizational training program. Suggests that the training man serves his management function when he develops the learning tools for management use.

19. SILVERN, LEONARD C. "Professionalization of Training: The MS in Training Administration." *Journal of the American Society of Training Directors:* Vol. 15, No. 8, August 1961, pp. 29–32.

    Reports a study of the problem of professionalization of the training man, with specific reference to appropriate academic preparation. Presents a proposed curriculum listing essential courses and sequences.

20. STOCKARD, JAMES G. "Earmarks of the Modern Training Specialist." *Personnel Administration:* Vol. 24, No. 6, November–December 1961, pp. 36–38.

    The author outlines the major activities in which a Training Specialist should engage. He emphasizes the policy formulation and innovation aspects of the role.

C. IDENTIFYING TRAINING NEEDS

21. Arizona State Employment Service. Economics, Statistics, and Research Unit. *Manpower Requirements and Training Needs Study, Tucson Labor Market Area.* Tucson: Arizona State Employment Service, July 1957.

    An area study examining the skill requirements and training needs to provide the essential manpower for the community. This broad and revealing study is one of several conducted under various sponsorships in coordination with the U. S. Bureau of Employment

Security. (Information about other studies can be obtained from U. S. Department of Labor, B.E.S.)

22. EDGERTON, H. A. "Some Needs in Training Research." *Personnel Psychology:* Vol. 8, Spring 1955, pp. 19–25.

Summary of an address in which a series of areas for internal training research are cited and techniques are suggested.

23. EWING, RUSSELL H. "Training Needs Survey Check List." *Journal of the American Society of Training Directors:* Vol. 14, No. 1, January 1960, p. 50.

A forty-five item check-list which should be useful in helping to isolate those areas in which members of an organization feel training needs exist.

24. JACKSON, B. B., and A. C. MacKINNEY. "Method of Determining Training Needs." *Personnel:* Vol. 36, No. 5, September–October 1959, pp. 60–68.

Authors describe and assess the various methods commonly utilized to determine training needs, concluding that their study shows a scarcity of really hard facts about training need analysis. Provides a jumping-off point for further study of this critical area.

25. SURANK, WILLIAM A. "A Frame of Reference for Development." *Journal of the American Society of Training Directors:* Vol. 14, No. 9, September 1960, pp. 31–38.

The article emphasizes the need for an adequate background of information in evaluating training needs in an organization. The devices for gathering such information are enumerated and explained. Conclusions concerning the subsequent evaluation procedures are drawn.

26. THOMAS, EDWIN J., *et al. In-Service Training and Reduced Workloads.* New York: Russell Sage Foundation, 1960. 130 pp.

Due to the increased work load in the area of Aid to Dependent Children caused by the 1956 amendments to the Social Security Act, a need was evidenced in the Michigan State Department of Social Welfare for improved training of caseworkers to cope with the added burden. This book describes in detail a research project carried out in the department to determine what type of program would be best to accomplish these aims. The account describes the research problem, the research method and design, and the resulting training program.

D. INSTRUCTIONAL METHODS

27. ALLEN, CHARLES R., GEORGE P. HAMBRECHT, and R. L. WELCH. *The Instructor, the Man, and the Job.* New York: Lippincott, 1945. 399 pp.

This text is a revision of a pioneer venture in instructor training for vocational educators and industrial trainers by Dr. Allen, first published in 1919. It is significant in that it is based on the first successful attempts to extend formal training into the workplace environment. As such it is an important historical document, but it also provides sound educational methodology for industrial training. The text follows a logical sequence from learning principles and theory through planning and administration of training programs. Major emphasis is placed on the role of the supervisor and foreman in the instructional process. It is safe to say that a large part of theory and practice in industrial training is derived from this text.

28. BELLOWS, ROGER. "The Management of Learning, Theory and Practice." *Personnel Administration:* Vol. 23, No. 1, January–February 1960, pp. 21–28.

    Brief summaries of principles of learning enunciated at various times in man's history. Describes the concepts which have been applied in the process of learning and teaching. A useful source from which the learner and trainer can identify the areas for deeper study of the learning process.

29. ———. "The Management of Learning." *Personnel Administration:* Vol. 23, No. 2, March–April 1960, pp. 4–10.

    The authors outline seven steps in planning a training program. Major emphasis is placed on the psychological aspects of learning.

30. CANTOR, NATHANIEL F. *The Teaching-Learning Process.* New York: Dryden Press, 1953. 350 pp.

    An analysis and detailed description of instructional method applicable in Group Dynamics processes. Could be useful for the industrial training specialists in the process of teaching line personnel to carry out their job instruction responsibilities. The chapter on "The Measurement and the Quality of Learning" is most directly applicable.

31. CLARK, HAROLD F., and HAROLD S. SLOAN. *Classrooms in the Factories.* Rutherford, N. J.: Institute of Research, Fairleigh Dickinson University, 1958. 139 pp.

    Report of a survey assessing the extent of in-service educational activity conducted by business and industry. Authors concerned themselves mainly with learning programs outside the motor-skill development area. Describe in-plant and institutional courses at the technical, supervisory, and management levels. Conclude that industry's preoccupation with education represents a major shift in values and suggest some important consequences.

32. COUCH, VIRGIL L. "Disaster Management Training." *Journal of the American Society of Training Directors:* Vol. 15, No. 9, September 1961, pp. 3–8.

Suggests that the Training Specialist in the organization must be prepared to set up essential training plans for civil defense and survival requirements as long as there is a threat of attack. Details key items which must be taken into account and outlines a basic program.
(Other references to civil defense training can be found in the same Journal issue.)

33. DINERMAN, BEATRICE, EUGENE P. DRARIN, and EDWARD F. STANIFORD. "Furthering Employee Education in State and Federal Governments." *Personnel Administration:* Vol. 23, No. 1, January–February 1960, pp. 37–43.

This is a report of a research study which outlines in general terms the extent to which federal and state governments sponsor educational programs for their employees.

34. DOUGLAS, PAUL H. *American Apprenticeship and Industrial Education.* New York: Longmans Green, 1921. 348 pp.

A document of historical value in the field of learning skills for employment. A descriptive history of apprenticeship from its origins to the period of World War I, at which time the author finds the use of apprenticeship declining as a means of worker training. Causes for the decline at that time are explored. Early legislation affecting industrial education (Smith-Hughes Act of 1917) and the implementing educational techniques are covered in detail. The concluding chapter asks the question, "How can we, in our complex industrial society, devise a system which will fulfill all the functions of the old-time apprenticeship...?" and the author proceeds to list a program of seventeen proposals. The student of industrial education and training will find significance in the number of the proposals which have been implemented by law and practice.

35. DRUCKER, PETER F. "Employee Education, a Realistic Goal." *Advanced Management:* Vol. 18, No. 12, December 1953, pp. 25–33.

The author suggests that management communication programs are currently based on the assumptions (1) that employees are interested in the same things as management: profits, prices, wages, efficiency, free enterprise, etc., and (2) that employees, or a fairly large number among them, are hostile to the American free enterprise system and at least slightly infected by collectivist doctrines, and that there is no basis for either assumption. Management must create an acceptance of its authority and competence by the operation of its day-to-day operating policies and practices.

36. EMERSON, LYNN A. *How to Prepare Training Manuals.* Albany: University of the State of New York (State Education Department), 1952. 356 pp.

The preparation of written instructional manuals is analyzed and discussed from initial steps to completion. Educational principles to be applied, formats, the writing of copy, illustration, and layout are among the topics covered. A large number of samples are presented in the appendix.

37. FRYER, DOUGLAS H. "Training with Special Reference to Its Evaluation." *Personnel Psychology:* Vol. 4, No. 1, Spring 1951, pp. 19–37.

This article is concerned with a design for building attitudinal and behavioral considerations into training methods to supplement knowledge and skill areas. The author states that in complex tasks the typical job analysis approach is insufficient, and proposes an attitude-knowledge-skill pattern.

38. FRYER, DOUGLAS H., MORTIMER R. FEINBERG, and SHELDON S. ZALKIND. *Developing People in Industry.* New York: Harper and Brothers, 1956. 210 pp.

This book is an elementary text dealing with why and how adults learn in the setting of the work environment. Chapters are devoted to such areas as curriculum construction, training methods and techniques, visual aids to learning, and training program administration.

39. GALENSON, W. "Industrial Training in the Soviet Union." *Industrial and Labor Relations Review:* Vol. 9, No. 4, July 1956, pp. 562–576.

Article examines work-skill training programs in Russia, including factory schools and formal vocational education. Emphasizes program for upgrading skills of the national workforce.

40. GHISELLI, EDWIN E., and CLARENCE W. BROWN. *Personnel and Industrial Psychology.* (2nd ed.) chap. 13, "Training in Industry." New York: McGraw-Hill, 1955.

This chapter places the training activity of organizations into a framework of psychological and sociological concepts and theories. Covers the need for training, learning theory applied in organizational settings, instructional methods and techniques, and evaluation of training results. Makes a case for the importance of attitude development as well as skill development in the training process.

41. GOETZ, BILLY E., and WARREN G. BENNIS. "What We Know about Learning and Training." *Personnel Administration:* Vol. 25, No. 2, March–April 1962, pp. 20–33.

Writers effectively summarize the basic principles and techniques of learning as they apply to industrial training. Useful in planning and executing a training program.

42. GOODACRE, DANIEL M. III. "Changing On-the-Job Behavior: How and Where to Start." *Personnel:* Vol. 37, No. 3, May–June 1960, pp. 58–62.

A pertinent discussion of the introduction and implementation of a program of change in the industrial situation. The article enumerates and explains the conditions necessary for changing attitudes and skills.

43. GOURE, LEON. "Civil Defense Training in Russia." *Journal of the American Society of Training Directors:* Vol. 15, No. 9, September 1961, pp. 9–15.

Describes what the Soviet Union is doing in training for civil defense.

44. HERZBERG, FREDRICK, *et al. Job Attitudes.* Pittsburgh: Psychological Service of Pittsburgh, 1957. 279 pp.

A source text reporting vital data on employee attitude essential to employee training and development.

45. LAWSHE, C. H., and F. J. HARRIS. "Contributions of Military Psychology to Personnel Training." *Personnel:* Vol 25, September 1948, pp. 127–136.

Research psychologists in the military during World War II made some important contributions in the field of training at the work performance level. The authors have analyzed some of the research results for application to industrial job training and conclude that a contribution has been made which can cut cost and heighten the effectiveness of training. Consideration is given to developments in training research dealing with duration of practice, design of training equipment, measurement of learning success, and standardization of training methods.

46. MOSEL, JAMES N. "Why Training Programs Fail to Carry Over." *Personnel:* Vol. 34, No. 3, November–December 1957, pp. 56–64.

This article deals with transference from the learning situation to behavior and job performance. The author identifies barriers that impede transfer with special emphasis on the influence of an organization's "reward structure," both formal and informal. Concludes that organizational climate change must be concurrent with training to effect change in supervisory behavior.

47. MURPHY, M. J. "Job Instruction Training: One Answer to Your Green-Worker Problems." *Factory Management and Maintenance:* Vol. 109, January 1951, pp. 120–121.

Article serves to remind trainers of the TWI programs which were effective during World War II when work force expansion required quick training methods. Suggests the possibility of applying "J" courses to provide for current training needs.

48. OAKLEY, C. A., ed. *Commercial Apprenticeship*. London: University of London Press, 1962. 112 pp.

Describes three British programs designed to provide early in-service training and education for positions in the operation and management of commercial enterprises including banking, accounting, and distribution services. Covers the need for such specialized training as well as methods and course structures.

49. PATTERSON, WILLIAM F., and M. H. HEDGES. *Education for Industry: Policies and Procedures of a National Apprenticeship System*. New York: Prentice-Hall, 1946.

A competent discussion of the role of apprenticeship in industrial training and the procedures for setting up and administering programs.

50. ROSE, HOMER C. *The Instructor and His Job*. Chicago: American Technical Society, 1961. 280 pp.

A sound elementary text designed for use in training job instructors to handle critical teaching responsibilities. Applicable equally for supervisor training and for training skilled employees, shop or office, who are assigned instructional responsibility.

51. SEASHORE, CHARLES, and ELMER VAN EGMOND. "The Consultant-Trainer Role in Working Directly with a Total Staff." *Journal of Social Issues:* Vol. 15, No. 2, 1959, pp. 36–42.

Authors propose the utilization of the training process by an outside consultant as a method of introducing planned change into an organization. Article outlines three kinds of organizational problems for which this approach might be useful.

52. SERBEIN, OSCAR N. *Educational Activities in Business*. Washington: American Council on Education, 1961. 180 pp.

A serious attempt to integrate the activities carried on by educational institutions and internally by business and industry in the process of developing a work force to meet the needs of the national economy. The emphasis is on the interest which business has taken in institutional education through financial and other contributions, and on training programs carried on within business organizations. Evidence in the study points to the fact that in large and small enterprises, increasing concern is being attached to the growing need for an educated work force. Provides a series of case reports outlining company practices in training and education.

53. SYKES, A. J. M. "Effect of a Supervisory Training Course in Changing Supervisor's Perceptions and Expectations of the Role of Management." *Human Relations:* Vol. 15, August 1962, pp. 227–243.

Perceptive article underscores the importance of organization climate

to the success of a supervisory training program. Author reports on an unsuccessful supervisory training program. Failure is traced to the fact that training gave supervisors a different attitude toward their role than top management expected them to fulfill on the job.

54. TEAD, ORDWAY. "Administration as an Educational Function." *Advanced Management:* May 1951, pp. 21–26.

The article discusses four issues revolving around education basic to good administration and management development. The administrative mind; the responsibility of the executive to carry on his functions in such a way so as to be of educational value not only for his associates and subordinates, but also for himself; the need for providing future executives and others qualified for promotion with an opportunity to actually perform under guidance the job for which they are being considered; the role of the university in providing basic knowledge to be utilized on the job where the actual learning "how to" process takes place.

55. U. S. Department of Labor. Bureau of Apprenticeship and Training. *A Look at Industrial Training in Mercer County, N. J.* Washington: G.P.O., 1959. 29 pp.

This report gives the findings of a regional study of training methods utilized to provide qualified manpower in 579 reporting establishments employing four or more people. The study is representative of other regional studies conducted by B.A.T. Survey methods and results are described.

56. VENABLES, P. F. R. *Sandwich Courses, for Training Technologists and Technicians.* London: Max Parrish and Co., Ltd., 1959. 160 pp.

Describes in detail a method for utilizing educational institutions and the work environment in combination to train competent technicians and engineers for industry. Cites the problems of curriculum construction and program administration inherent in making this kind of training effort effective.

57. WEAVER, DAVID O. "The Instructor's Relationship to His Students." *Journal of the American Society of Training Directors:* Vol. 17, No. 1, January 1960, pp. 40–47.

A comprehensive yet easy to understand enumeration of teaching principles and techniques, the understanding and application of which would undoubtedly increase training effectiveness.

58. WRIGHT, MOORHEAD. "Individual Growth: The Basic Principles." *Personnel:* Vol. 37, No. 5, September–October 1960, pp. 8–18.

The article contains a detailed analysis of ten basic principles inherent in the successful development of the individual. The

principles are simple and obvious; however, the author points out that these "obvious" principles are more often violated and ignored than observed and honored. Cogent discussions and examples are included after each principle.

E. ORGANIZATION FOR TRAINING

59. American Management Association. *Management Education for Itself and Its Employees,* part 4, "The Education of Employees: A Status Report with a Proposal for Further Research," by Douglas Williams and Stanley Peterfreund. New York, 1954.

    An analysis of the literature and experience dealing with education programs sponsored and conducted by industrial organizations. Describes company activities in 'nonvocational' education for nonsupervisory employees.

60. CUSHMAN, FRANK. *Training Procedure.* New York: John Wiley, 1940. 230 pp.

    A discussion of problems encountered in planning, organizing operating, and maintaining efficient training programs in organizations. Covers training for initial employment and continuous training on the job. Provides examples of various methods for implementing training requirements of the organization. Sections are devoted to identifying training needs, planning and conducting training activities, and evaluating programs.

61. GLASER, ROBERT. *Training Research and Education,* with chapters by Glenn L. Bryan and others. Pittsburgh: University of Pittsburgh Press, 1962. 596 pp.

    This book examines the findings of psychological research and considers its implications for education and training. The volume includes a wide variety of authors who report the results of their experimental work in terms of learning theory and practice. Each section contains an exhaustive bibliography.

62. HILL, SAMUEL, and FREDERICK HARBISON. *Manpower and Innovation in American Industry.* Princeton, N. J.: Industrial Relations Section, Princeton University, 1959. 85 pp.

    Reports the implications for training and development of management talent to support innovation in industry. Cites evidence of need and outlines the problem associated with developing brain power as it supplants brawn power in the production process.

63. ODIORNE, GEORGE S. "Training for Profit," *Journal of the American Society for Training Directors:* Vol. 15, No. 7, July 1961, pp. 7–17.

    Author suggests that as a more highly educated work force is employed

to meet the exigencies of technological change, management should re-evaluate its training budget. The training specialist in the organization should be in a position to recommend the directions which training expenditures should take. The purpose of the training budget must be to make provision for investment in human capital.

64. "Plan for Greater Productivity with Inspired Employee Training." *Factory:* Vol. 121, November 1963, pp. 164–169.

Provides a number of suggestions for the application of planned employee training in specific industrial situations. Includes a helpful list of sources of instruction aids.

65. SENN, PETER R. *Liberal Education for Trade Union Leaders.* Chicago: University of Chicago, 1958. 100 pp.

An extensive analysis of the problems involved in establishing college-level educational programs for especially qualified union leaders. Based to some extent on the University of Chicago's labor education program, which combines broad training in the humanities and social sciences with specialized training in industrial relations and communication, a number of proposals are made. These proposals concern themselves with program content, administration, selection of students, financing, and evaluation.

66. U.S. Civil Service Commission. *The Training of Federal Employees.* Personnel Methods Series No. 7. Washington: G.P.O., 1959. 146 pp.

A report on training programs and procedures for operation in various federal government agencies. Included in the study are discussions of federal training policy, training organization, methods of need identification, and program evaluation, as well as description of programs covering orientation, supervisory, management, technical, professional, and work-skill training.

67. U.S. Department of Labor. *Our Manpower Future 1955–65.* Washington: G.P.O. 16 pp.

A chart which depicts anticipated changes in U.S. population and labor force during the ten years indicated and points out some of the implications for education and training for effective manpower utilization.

68. U.S. Department of Labor. Bureau of Apprenticeship and Training. *Training Materials You Can Use,* (four parts). Washington: G.P.O., 1957.

A comprehensive listing of sources for training programs and materials for management, clerical, skilled, and service occupations. Contains materials in the category of methods and techniques for planning, administration, and operation of training.

F. BASIC TEXTS ON TRAINING

69. COOPER, ALFRED M. *Employee Training.* New York: McGraw-Hill, 1942. 311 pp.

    This book is a pioneering achievement in identifying the role of the training function in the work environment. In 1942 the author bravely set out to record principles and concepts which at this date may be considered elementary but have formed the basis for expansion of the training function and the development of more current sophisticated training methods and techniques.

70. Cornell Conference Report. *Fifth Annual Institute for Training Specialists.* Ithaca: New York State School of Industrial and Labor Relations, 1955. 88 pp.

    A digest of the proceedings of the annual Institute at Cornell. Major addresses on a variety of training subjects are reported in detail and summaries of workshops are provided. Comparable material can be found in these reports:
    Report of the Sixth Annual Institute for Training Specialists, 1956. 178 pp.
    Report of the Seventh Annual Institute for Training Specialists, 1957. 101 pp.

71. CUSHMAN, F., and R. W. CUSHMAN. *Improving Supervision.* New York: John Wiley, 1947. 232 pp.

    A basic text written during early stages of supervisory training development covering various aspects of training procedures in industry. A source for the student interested in the evaluation of supervisory training ideas and methods.

72. DePHILLIPS, FRANK A., WILLIAM M. BERLINER, and JAMES J. CRIBBIN. *Management of Training Programs.* Homewood, Ill.: Richard D. Irwin, 1960. 469 pp.

    A textbook covering the role and function of training, learning and the instructions process, organization and administration of training, and training evaluation and research. Applicable in the classroom and by the operating practitioner.

73. HAIRE, MASON. *Psychology of Management,* Second Edition. New York: McGraw-Hill, 1964. 238 pp.

    A basic text which can be used profitably in connection with supervisor and manager training in the field of human behavioral characteristics in the work organization setting. The book is a revision of an earlier edition, which takes into account the human relations problems in organizations affected by a rapidly changing technology.

74. HALSEY, G. D. *Training Employees.* New York: Harper, 1949. 263 pp.

Intended primarily as a handbook for use by supervisors and managers who assume responsibility for the training of their employees. Covers details of "how to do" in a wide variety of training situations: manufacturing, office, retail store.

75. KAHLER, ALFRED, and ERNEST HAMBERGER. *Education for an Industrial Age*. Ithaca, N. Y.: Cornell University Press, 1948. 334 pp.

A classic study of the role of educational institutions and the industrial work place in the process of developing manpower resources to meet the needs of an expanding economy. Conclusions are based on an analysis of industrial trends and comparative educational methods used in other industrial countries. Includes a chapter on the early development of the Technical Institute.

76. McGEHEE, WILLIAM, and PAUL W. THAYER. *Training in Business and Industry*. New York: John Wiley and Sons, 305 pp.

A textbook designed for class-room use which has application at the in-service manager training level. Devotes attention to learning principles as applied in the industrial setting. The book is planned around the fundamental assumption that meaningful training must be based on needs derived from organization analysis, operations analysis, and man analysis. One chapter is devoted to training evaluation.

77. McLARNEY, WILLIAM J. *Management Training, Cases and Principles*. Homewood, Ill.: Richard D. Irwin, 1959. 534 pp.

An exhaustive text for use at the college level and for in-service training of supervisors and managers. Combines emphasis on managerial principles with case material for discussion.

78. PLANTY, EARL G., and J. THOMAS FREESTON. *Developing Management Ability: 600 Questions and Answers*. New York: Ronald Press, 1954. 447 pp.

A primer covering vocabulary and definitions of the training field, as well as brief references to techniques and methods employed in supervisor and manager training.

79. PLANTY, EARL G., *et al. Training Employees and Managers for Production and Teamwork*. New York: Ronald Press, 1948. 278 pp.

A basic text covering the broad concepts which have developed in industrial training. Devotes considerable coverage to procedures for organizing and administering the training function; describes in detail a variety of training programs and methods taken from company experiences. For the training man in an organization, the book provides the basis for developing and administering training programs.

80. SANTMYERS, S. S. *Managing Men at Work.* Scranton, Pa.: International Textbook, 1950. 297 pp.

Many companies of modest size, upon deciding to engage in formal supervisory and presupervisory training, find it difficult to adapt training texts and materials which have been designed around the typical problems of large companies. This book should serve such companies well. Content and style are suitable for supervisors and foremen who have been promoted from the ranks. Subject areas include the economic system, production, workers, organized labor, and organization structure.

81. STATON, THOMAS F. *How to Instruct Successfully.* New York: McGraw-Hill, 1960. 291 pp.

This practical text is divided into two parts, covering (1) some concepts of learning and how learning is achieved, and (2) methods and techniques which can be used in the instructional process. The book is designed for those who are called upon to instruct in their area of technical specialties and is not burdened with details about learning theory.

82. TAYLOR, F. W. *The Principles of Scientific Management.* New York: Harper Brothers, 1911, pp. 9–73.

A source reference which represents early emphasis on the need for employer and management training in the organizational setting. The assumptions in this work have influenced the direction in which training methods and emphasis were developed in the U.S. industrial scene.

83. U. S. War Manpower Commission. Bureau of Training, Training Within Industry Service. *The Training Within Industry Report, 1940–1945.* Washington: G.P.O., 1945. 330 pp.

This report details fully the genesis of the TWI program and its design for meeting training needs resulting from the urgent production requirement in the early days of World War II. Describes the job instructor training, job methods training, and job relations training programs.

84. VON BLEICKEN, BLEICK. *Employee Training Handbook: A Guide for Training by Operating Management.* New York: Conover-Nast, 1953. 300 pp.

Author identifies the role of training in the industrial setting and describes specific areas which are considered as essential to the training function. Detailed sections devoted to identification of training needs and training program evaluation.

III. WORK SKILL TRAINING

A. EMPLOYEE ORIENTATION

85. BROCHE, W. G. "Let the Foreman in on Education." *Personnel:* Vol. 29, No. 5, March 1953, pp. 408–411.

    Describes the vital role of the supervisor in the training process, with particular reference to induction and initial job training.

86. CARDWELL, B. W. "Later Orientation Prevents Mental Indigestion." *Personnel Journal:* Vol. 31, No. 10, pp. 364–366.

    The author claims that the tendency to tell the new employee too much about the company as soon as he is put on the payroll results in "mental indigestion." He describes an orientation program conducted after a shakedown period of a few weeks when the new person can absorb it more readily.

87. FISHER, JOHN F., and NEELY D. GARDNER. "A Development Program for Personnel Technicians." *Public Personnel Review:* Vol. 21, April 1960, pp. 110–113.

    The article is concerned with the selection and assignment of personnel technicians for California State Personnel Board. A description is given of the Board's philosophy of training and of the actual training program given to the incoming trainees. The program is based on the belief that development must be consistent with the unique needs of each individual.

88. HALSEY, G. D. *Selecting and Inducting Employees.* New York: Harper, 1951. 361 pp.

    The basic assumption of this handbook is that the employee selection and hiring process is synonymous with effective introduction to the job and company. With this in mind, the text covers interviewing, testing, employment procedures, and formal and informal induction plans.

89. Metropolitan Life Insurance Company. Policyholders Service Bureau. *Orienting the New Worker.* New York, 1959.

    Describes a variety of company programs for hiring a new employee and introducing him to the job. Programs described are characterized in the main by the fact that the function is shared by the personnel department and the appropriate line supervisor, although examples are given of situations in which there is no staff function and the entire orientation is done by the supervisor.

90. National Industrial Conference Board, Inc. *Employee Induction.* Studies in Personnel Policy No. 131. New York, 1953. 48 pp.

    This study covers the purposes for new employee induction to the job and describes, in detail, a number of company orientation plans. Concludes that although programs cover a wide range of

information for employees, the material most frequently found in company induction programs includes: the individual's daily routine, employee benefits and services, personnel policies and practices, safety measures and regulations, company organization and operations, company products and services, and company history and business policy. Describes methods varying from informal coaching by the supervisor to elaborate schedules using extensive visual aids.

91. "Orientation Training." *Journal of Industrial Training:* Vol. 2, May–June 1948, pp. 10–17.

Excellent source for finding the origins of planned techniques for the introduction of new employees to the work environment. Assigns appropriate roles in the process to supervision and to the training function.

92. U. S. Civil Service Commission. *Improving Orientation Programs.* Personnel Management Series No. 7. Washington: G.P.O., 1955. 25 pp.

Outlines a pattern for inducting the new employee into his work environment. Plans and methods used in orientation are discussed; subjects to be covered, types of material, types of programs are among the topics examined in detail.

B. SKILL DEVELOPMENT AND IMPROVEMENT

93. ALLEN, CHARLES R., GEORGE P. HAMBRECHT, and R. L. WELCH. *The Instructor, the Man, and the Job.* New York: Lippincott, 1945. 399 pp.

The chapters in this book titled "Establishing an Effective Instructional Order," "Methods of Instruction," and "Lesson Planning" describe basic techniques for job instruction at the skilled and semiskilled levels.

94. Arizona State Employment Service. Economics, Statistics, and Research Unit. *Manpower Requirements and Training Needs Study, Tucson Labor Market Area.* Tucson: Arizona State Employment Service, July 1957.

A study of community manpower requirements with particular emphasis on training needs to provide a supply of skilled employees and technicians. Concerned with educational facilities and in-plant training required to meet current and projected needs.

95. BENSON, CHARLES S., and PAUL R. LOHNES. "Skill Requirements and Industrial Training in Durable Goods Manufacturing." *Industrial and Labor Relations Review:* Vol. 12, No. 4, July 1959, pp. 541–553.

Report of a study of skill needs and skill development in a sample

of 126 Massachusetts durable goods plants. The authors examined the actual technician and skilled manual worker distribution in the various industries represented in the sample and the kinds of training methods employed. Conclusions describe a clear difference in training methods in shops where technician skill need predominates, as compared to shops employing skilled manual laborers.

96. BOEHM, GEORGE A. W. "Can People Be Taught like Pigeons?" *Fortune:* Vol. 62, October 1960, pp. 176–179.

A critical analysis and evaluation of the level of acceptance which "teaching machines" have gained. A phenomenon of mass education, programmed learning, and the "machine" are based on concepts derived from psychological experiments with animals. It is suggested that the method has merit in training at the work-skill level. Several experimental applications are described.

97. FISHER, W. R. "Training Maintenance Personnel." *Iron and Steel Engineer:* Vol. 29, September 1952, pp. 177–181.

Describes a program of classroom and on-the-job training for maintenance men and supervisors in a large steel plant. The program is developed around the requirements of the steel industry.

98. HARRISON, OVAL S. "On Effective I-A Teaching." *Industrial Arts and Vocational Index:* Vol. 49, No. 1, January 1960, pp. 22–24.

The specific training techniques covered in the article include: (1) the lecture method, (2) the demonstration, (3) the panel discussion, (4) the written instruction, and (5) the problem solving method. The use of audio-visual and textbook and reference material is also discussed briefly.

99. HINRICHS, JOHN R. "Research on Human Motor Skills: Implications for Industry." *Journal of the American Society of Training Directors:* Vol. 16, No. 5, May 1962, pp. 29–32.

Report discusses psychological research and theory dealing with motor skills with particular emphasis on the areas concerned with employee selection and training.

100. LIMBERG, H. "Reinvestment Training Capitalizes on Your Employees' Experience." *Office:* Vol. 57, No. 4, April 1963, pp. 12–13.

Authors describe a unique training device which utilizes the experience and "know how" of senior employees. After management trainees have been indoctrinated with principles and concept, senior employees relate actual case studies which indicate how the principles are applied in practical situations. Thus participation of senior employees and the reinvestment of experience, the authors claim, pay rich dividends.

101. National Manpower Council. *Improving the Work Skills of the Nation,* part 3, "Industry and the Development of Skill." New York: Columbia University, 1955. 203 pp.

This book resulted from a Columbia University Conference on "Improving the Work Skills of the Nation" and represents a series of addresses made at the Conference. Of particular interest is the section dealing with the responsibility of industry in developing the work skills of the national labor force.

102. ———. *A Policy for Skilled Manpower.* New York: Columbia University, 1954. 299 pp.

An appraisal of the role of skilled workers and technicians in the U.S. economy and a statement of problems affecting their training. This study, completed under a grant from the Ford Foundation, focuses attention on improvement of the quality and effective utilization of skilled manpower resources.

103. NAYLOR, JAMES C. *Parameters Affecting the Relative Efficiency of Part and Whole Training Methods: A Review of the Literature.* Columbus: Laboratory of Aviation Psychology, Ohio State University, 1962.

An assessment of research findings dealing with part or whole learning methods to acquire work skills. The report concluded that the nature of the specific task to be learned has a bearing on which method achieves most efficient results. A comprehensive bibliography is included.

104. PARKER, JAMES F., JR., and EDWIN A. FLEISCHMAN. "Use of Analytical Information Concerning Task Requirements to Increase the Effectiveness of Skill Training." *Journal of Applied Psychology:* Vol. 45, No. 5, October 1961, pp. 295–302.

A research study which demonstrates the effectiveness of careful job analysis and recognition of the fact that in complex sequential learning situations different emphasis is required with respect to competence to achieve task requirements. The experiment is built around a tracking task which is typical of complex learning procedures essential in military and other airplane control.

105. POND, ALFRED W. "Telling, Showing—Doing and Learning." *Supervision:* Vol. 22, No. 2, February 1960, pp. 4–6, 12.

Article presents the case for detailed job explanations in training employees. Argues that careful analysis and explanation of smaller as well as major details are essential if trainee is to learn his job well and avoid mistakes. Comprehensive example of this technique is given.

106. QUEENER, J. SHARP. "On-the-Job Training Prevents Off-the-Job Accidents." *Supervisory Management:* Vol. 5, No. 2, February 1960. pp. 9–16.

"Because of intensive plant safety programs, most workers are safer on the job than they are off." After substantiating this assertion, the article goes on to explain the disadvantages which redound to industry when off-the-job accidents occur. Du Pont's program for reducing off-the-job accidents is illustrated.

107. ROSE, HOMER C. *The Instructor and His Job.* Chicago: American Technical Society, 1961. 280 pp.

Detailed coverage of instructional methods for skilled, semi-skilled, and office clerical employees.

108. SINICK, DANIEL, and ROBERT HOPPOCK. "Research by States on the Teaching of Occupations." *The Personnel and Guidance Journal:* Vol. 39, No. 3, November 1960, pp. 218–220.

A brief report on the research done in various states in the area of occupational skill instruction.

C. OFFICE AND CLERICAL EMPLOYEE INSTRUCTION

109. SUOJANEN, WAINO W., and G. C. HOYT. "Differences in Motivation Among White-Collar Workers." *Personnel:* Vol. 34, No. 2, September–October 1957, pp. 26–31.

A discussion of the characteristics of women in the clerical work force and the factors which affect their training and supervision.

110. U. S. Department of Health, Education and Welfare. *Staff Development, the Supervisor's Job.* Washington, D. C.: Supt. of Documents, 1963. 29 pp.

This booklet presents a summary of points of view as well as methods applicable to the problems of training in office and clerical operations.

111. WITT, JOHN A. "Are We Overlooking Something?—Yes, Clerical Training." *Journal of the American Society of Training Directors:* Vol. 15, No. 1, January 1961, pp. 34–41.

Since the amount of time and money spent on recruitment of clerical employees is high, it is evident that training at this level is essential to reduce turnover and to motivate performance. Article describes in detail a program for clerical employee training.

D. RETRAINING

112. ENTWISLE, D. G. "Aging: The Effects of Previous Skill on Training," *Occupational Psychology:* Vol. 33, No. 4, October 1959.

Describes a study involving retraining of employees in a situation where horse-drawn vehicles were replaced by motor vehicles in a company operation.

113. FOLTMAN, F. F. *Xerox Corporation: A Study in Retraining.* Reprint Series No. 134. Ithaca: New York State School of Industrial and Labor Relations, 1963. 20 pp.

A detailed description and evaluation of a retraining procedure in a company involved in major technological change. The case study covers the operating circumstances leading to company and union agreement on the program, the screening methods utilized, and the curriculum followed. An essential part of the study deals with employee reaction to the program.

114. GIOVANONI, RICHARD. "Operator Retraining: To Manual Manufacturing Operations." *Personnel Journal:* Vol. 41, No. 7, July–August 1962, pp. 337–340.

Suggests that training time allowance applied to newly hired employees is not applicable to experienced employees who are transferred to new tasks. Outlines a plan for establishing time allowance for retraining.

115. JAKUBAUSKAS, E. B. "Retraining: A Problem Created Through Equipment Replacement." *Personnel Journal:* Vol. 42, November 1963, pp. 512–518.

Report presents significant findings as to the general labor market trends in the 1960's and the experience of particular firms in adjusting to changes, based on the results of twenty case studies of computer installation.

116. KAUFMAN, JACOB J. "Labor Mobility, Training and Retraining." *Studies in Unemployment,* Special Committee on Unemployment Problems, United States Senate. Washington: G.P.O., 1960. pp. 343–365.

The chapter describes the problems faced in areas having substantial unemployment and how training and retraining might help to solve these problems. The author emphasizes the uses of training in distressed areas, the types of training that might be utilized, and the training being done in the distressed areas of Pennsylvania.

117. McNAMARA, W. J. "Retraining of Industrial Personnel." *Personnel Psychology:* Vol. 16, Autumn 1963, pp. 233–297.

Report presents the results of a preliminary study designed to determine the feasibility of retraining employees made surplus by technological change. Explains in detail how computer electronic technician trainees were chosen, trained, and placed in new, higher level positions. Author's results indicate that learning ability did not present a major obstacle provided that training time could be increased.

118. "Retrain to Retain Displaced Employees." *Factory:* Vol. 118, No. 8, July 1960, pp. 86–89.

A brief article explaining how a large manufacturing company had retained much of its work force in face of increasing automation. A general outline of the training programs being utilized in the account.

119. "The Utica Story: Matching Workers to Jobs." *Industrial Bulletin:* Vol. 33, No. 4, April 1954, pp. 3–7.

Description of the community-wide retraining project which took place in Utica, N. Y. The steps taken by local businessmen and businesses, the State Department of Labor, and local and neighboring high schools and colleges are summarized. Some of the effects of the project are reported.

120. WILLIAMS, LAWRENCE A. "Training Older Workers in New Skills." *Supervisory Management:* Vol. 8, No. 3, March 1963.

Author comments on the nature of older workers as it affects learning capacity during the process of retraining. Offers guides for training older workers.

E. VOCATIONAL TRAINING

121. FOLTMAN, F. F. *Findings and Recommendations With Respect to New York State Policy and Programs for Skilled Manpower Development.* Albany: New York (State) Department of Labor, September 1959. 90 pp.

This study is concerned with development of apprenticeship programs in New York State since the passage of the relevant legislation in April 1941. The study makes a complete evaluation of the apprenticeship programs in the state, including recommendations for the improvement of the extent programs, and a comparison of New York State's programs and the experiences of other states.

122. "Here's Do-it-yourself Unemployment Cure." *Nation's Business:* Vol. 51, No. 9, September 1963, pp. 62–68.

Describes how one state, South Carolina, has overcome the problems which plague adult vocational re-training. Outlines how a separate state agency, The Committee for Technical Education, dealt with trainee selection and motivation, updating teacher skills, and trainee placement.

123. RAMA, LOUIS. *Vocational Training in the Footwear Industry.* Report by Louis Rama. E.P.A. Project No. 5/10-I, Paris, 1960. 185 pp.

A study based on replies to a questionnaire on vocational and technical training in the tanning, footwear, and general leather manufacturing industries.

124. SMITH, DONALD. "Careers for the Unskilled." *Personnel Management and Methods:* Vol. 26, No. 236, February 1960, pp. 21–23.

The author outlines his firm's two-year general vocational training program for young, non-apprentice employees. Advantages of this training system for both the company and its employee are given.

F. APPRENTICESHIP—UNITED STATES

125. BERGEVIN, PAUL. *Industrial Apprenticeship.* New York: McGraw-Hill, 1947. 280 pp.

A detailed text dealing with the selection of apprentice candidates and establishing the curriculum and instructional staff for effective administration of apprenticeship programs.

126. BOYER, G. D. "Prep Selects Better Apprentices: Joint Apprenticeship Committee of Metropolitan Los Angeles." *Electrical West:* Vol. 115, July 1955, pp. 80–81.

Describes in detail the selection process employed for entry into the electrician apprenticeship program in Los Angeles County. Details are covered with respect to referral, application, interview, testing, and ultimate placement. Persistency and interest of the applicant are judged during a ten-week orientation period and is a major factor in determining admission to the apprenticeship. Programs are developed and jointly sponsored by area electrical contractors, the IBEW, and the public school system.

127. CHRISTENSEN, W. C., *et al.* "Special Apprenticeship Section." *Journal of the American Society of Training Directors:* Vol. 12, No. 6, pp. 22–49.

A series of articles analyzing the problems of skilled trade apprenticeship and describing various company programs.

128. DOUGLAS, PAUL H. *American Apprenticeship and Industrial Education.* New York: Longmans Green, 1921. 348 pp.

A historical assessment of apprenticeship method of work-skill training and an analysis of alternate methods under consideration in 1921.

129. ELSON, HILBERT. "N.Y. City School is Center of Apprentice Plan." *Industrial Bulletin:* Vol. 39, No. 9, September 1960, pp. 21–24.

The author describes in detail the overall apprenticeship program in the printing trades in New York State, the largest of its kind in the United States. The New York School of Printing forms the basis for this program, and extension facilities complete the system. Training procedures and methods utilized at the school and the needs that the program is expected to meet are discussed.

130. HAGEMEYER, RICHARD H. "Apprentice Selection Practices in Michigan's Manufacturing Industries." *Journal of the American Society of Training Directors:* Vol. 16, No. 2, February 1962, pp. 28–38.

Describes basic criteria and selection devices at the apprentice level. Concludes that not enough is being done in this area to meet skilled manpower needs.

131. MERENDA, PETER. "The Relative Effectiveness of Formal School and On-the-Job Methods of Training Apprentices in Naval Occupations." *Personnel Psychology:* Vol. 11, No. 3, 1958, pp. 379–382.

A report of research covering Naval apprentices which demonstrated that formal school method proved superior to "learning by doing" supplemented by informal class instruction in theory and practice.

132. "Negroes in Apprenticeship, New York State." *Monthly Labor Review:* Vol. 83, No. 9, September 1960, pp. 952–957.

An evaluation of the status of non-whites in skilled craft occupations and related apprenticeship training in New York State. Attention is given to the general limiting factors which tend to inhibit the entrance of all races into apprenticeship training systems, the limiting factors which confront Negroes, and specific racial discrimination problems.

133. PATTERSON, WILLIAM F., and M. H. HEDGES. *Education for Industry: Policies and Procedures of a National Apprenticeship System.* New York: Prentice-Hall, 1946.

Detailed discussion of need for apprentice training in industry. Attention is given to the stake of the employee, the union, and management in trade training. Integrates the role of government, schools, and industry in an effective program.

134. POULTON, JAMES. "Apprentice Programs Must Be Geared to Automation and Atomic Progress." *Machinists' Monthly Journal:* Vol. 67, Nos. 7 and 8, July–August 1955, pp. 210–213.

A union view of the problems facing skilled worker training as automation progresses. The author concludes that the importance of apprenticeship will grow with the spread of automation and that formal training will assume an even greater role than is the case at present.

135. U.S. Bureau of Apprenticeship and Training. *Apprenticeship and Training in the Contract Tool and Die Industry.* (Bulletin No. T.-150). Washington: G.P.O., November 1959. 31 pp.

A comprehensive report of the firms involved in training apprentices in the tool and die industry and their plans and program for conducting the training.

G. *APPRENTICESHIP AND SKILL TRAINING IN FOREIGN COUNTRIES*

136. "Apprenticeship of Women and Girls." *International Labour Review:* Vol. 72, October 1955, pp. 283–302.

A comparative study of problems affecting the entry of women into skilled occupation training programs in various industrialized countries.

137. BLAIN, ISABLE. "Operator Training: Suggestions for Programme Planning." *Occupational Psychology:* Vol. 30, October 1956, pp. 189–203.

Article describes and evaluates techniques for developing training plans for employees engaged in semiskilled occupations in Great Britain.

138. BLAND, H. A. "Apprenticeship—Can We Expect It to Supply the Need for Skilled Workers?" *The Journal of Industrial Relations:* Vol. 3, No. 1, April 1961, pp. 1–16.

Can a well-conceived apprenticeship program adapt to the demands of rapidly changing technology? This question is explored in this illuminating article concerning manpower training in Australia. Apprenticeship programs in other countries and improvements to Australia's current program are discussed by the author.

139. CROFT, MARGARET. *Apprenticeship and the 'Bulge.'* London: The Fabian Society, 1960. 20 pp.

Author evaluates the problems of apprenticeship training in Great Britain and offers a series of proposals for improvement. Describes the attitudes of government trade unions and management toward apprenticeship program development.

140. DEBOA, J. A. W., *et al. Apprentice Training For the Sixties.* London: Industrial Welfare Society, 1962. 28 pp.

A series of brief descriptions of apprenticeship methods used by British firms for craft skill and foremanship development. The various schemes rely heavily on classroom instruction and early opportunities for the learner to try out his skill under competent supervision.

141. Department of Labor and National Service. "In-Industry Training (A Symposium)." *Personnel Practice Bulletin:* Vol. 17, No. 2, Melbourne, Australia, June 1961, pp. 9–59.

An excellent summary of the current state of apprenticeship programs in Australia. Article outlines the problems faced by apprenticeship training. Included are several industrial examples of attempts to deal with the problem.

142. KROUSS, E. "Vocational Training in the Federal Republic of Germany: In-Plant Training for Apprentices and Learners." *International Labour Review:* Vol. 77, March 1958, pp. 209–219.

The author presents a critical review of preparation for vocational training in Germany and stresses the need to integrate on-the-job training with institutional education at the skilled-employee level.

143. WILLIAMS, GERTRUDE. *Training for Skill,* Research Series, No. 205. London: The Fabian Society, 1959. 28 pp.

After examining some of the reasons for the shortage of skilled workers in British industry, the author analyzes some of the present problem areas in apprentice training. She concludes by outlining several proposals, including those made in the Carr Report of 1958, to alleviate the skilled manpower shortage.

H. SALES TRAINING

144. ALVIN, ROBERT. "Acting Course for Salesmen?" *Sales Management:* Vol. 84, No. 2, Jan. 15, 1960, pp. 90–92, 94–95.

Describes a sales training course in which dramatization and role playing were utilized. Covers course content and teaching method.

145. HETHERMAN, R. "Learning the Hard Way Makes Selling Easier." *Industrial Marketing:* Vol. 47, July 1962, pp. 108–110.

Describes training program designed to update field sales engineers' knowledge of current company capabilities. Sales engineers were brought back into the factory and assigned responsibility for specific engineering problems with field sales application.

146. LAPP, CHARLES L. *Training and Supervising Salesmen.* Englewood Cliffs, New Jersey: Prentice-Hall, 1960. 223 pp.

This book emphasizes that a major responsibility of the sales supervisor is the effective training of sales personnel. Describes in detail methods for developing supervisory instructional skill and also provides educational techniques which the supervisor can utilize.

147. NELSON, R. M. "How Armco Trains Salesmen to Help the Customer Buy." *Industrial Marketing:* Vol. 45, October 1960, pp. 58–61.

Article describes the two and one-half year salesman training program at a client company. A distinctive feature of this program is the utilization of the Company Purchasing agent as the prospective customer during sales training sessions.

IV. TECHNICAL AND VOCATIONAL TRAINING

A. ROLE OF THE TECHNICIAN IN INDUSTRY

148. American Society for Engineering Education. Technical Institute Division. *The Engineering Technician.* New York: Technical Education News, June 1958. 18 pp.

Describes the engineering technician and outlines his duties in such fields as aeronautical, air conditioning, automotive, building construction, chemical, electrical, electronic, mechanical, and instrumentation technologies.

149. BRANDON, GEORGE L. *Twin City Technicians.* Research Report, College of Education. East Lansing: Michigan State University, 1958. 70 pp.

Reports the findings of a survey of industrial technicians in Benton Harbor and St. Joseph, Michigan; shows the kinds of technicians found and the various job titles used; describes the activities of technicians in working with equipment, instruments, industrial materials, hand and machine tools, drawings, other records, and energy and power; outlines in some detail the job activities of engineering, mechanical, maintenance, production, laboratory, and electronic technicians; shows the needs of technicians for various kinds of technical information and training.

150. COLEMAN, JOHN D. "The Winning Team." *Technical Education News:* Vol. 16 (special issue), 1956, pp. 1–3.

Discusses various factors in the evolution of the American industrial scene and the place of the engineering technician in the team of engineers, technicians, and craftsmen.

151. Federal Security Agency. (Now U.S. Department of Health, Education and Welfare, U.S. Office of Education.) *Vocational-Technical Training for Industrial Occupations.* Vocational Division Bulletin No. 228. Washington: G.P.O., 1944, pp. 16–136. (Note: This bulletin is out of print but may be available in libraries and state departments of vocational education.)

Provides an extensive description of the nature of industry's need for technicians; outlines the technician occupations in various divisions of twenty-two industries; describes typical occupations in considerable detail.

152. HAMPTON, THOMAS E. *A Survey of Technical Occupations in Louisiana Industry.* Baton Rouge, La.: State Department of Commerce and Industry, 1951, pp. 13–33.

Chapter surveys the numbers and types of technicians needed in such industries as chemicals, malt liquors, paper, printing, petroleum products, sawmills, shipbuilding, banks, contract construction, hotels, insurance, real estate, retail merchandise, and utilities.

153. HARRINGTON, GORDON M. *Technicians for Connecticut Industry.* Hartford, Connecticut: State Department of Education, 1957, pp. 9–25.

Outlines the place of the technician in industry in relation to the engineer and the skilled mechanic; gives brief descriptions of many technician occupations; reports a survey of technician needs in Connecticut.

154. International Labour Office. *Automation and Other Technological Development: Report of the Director General.* Report I, Part I. Geneva: The International Labour Office, 1957. 105 pp.

Discussion of the pace of technological change, the impact on employment, skill changes brought about by technological change, and its influence on the education and training of young people and adults.

155. MINER, JOHN B. "The Effect of a Course in Psychology on the Attitude of Research and Development Supervisors." *Journal of Applied Psychology:* Vol. 44, No. 3, June 1960, pp. 224–232.

Article discusses problems of supervising technical and scientific personnel.

156. Mississippi State College. Department of Industrial Education. *Development of Technical Education in Mississippi Public Junior Colleges.* Mississippi: State College, 1956, pp. 26–49. (Report of the 1956 Junior College Conference.)

A series of articles on specific needs for technicians in the electrical, chemical, wood products, and highway construction industries; provides information on the place of the technician in these industries, numbers needed, descriptions of technician occupations, and types of education required.

157. National Manpower Council. *Utilization of Scientific and Professional Manpower.* New York: Columbia University Press, 1954, pp. 48–64 and 102–133.

Defines the technician and outlines the characteristics of the technician group; discusses patterns of utilization of technicians and their place in the medical and health fields.

B. INSTITUTIONAL TRAINING RESOURCES

158. American Educational Research Association. "Vocational, Technical and Practical Arts Education." *Review of Educational Research:* Vol. 32, October 1962, pp. 367–432.

Reviews the major research findings in the general areas of vocational, technical, and practical arts education. Provides both the current status of research and major findings. Includes the areas of career planning, job placement, agricultural education, home economics education, industrial education, business education, distributive education, and technical education. Invaluable beginning point for research in the area.

159. ARMSBY, HENRY HORTON. *Cooperative Education in the U.S.* U. S. Office of Education, Bulletin No. 11. Washington: G.P.O., 1954. 58 pp.

The cooperative plan of education is defined as an integration of classroom work and practical industrial experience in an organized program under which students alternate periods of attendance at college with periods of employment in industry. This bulletin covers cooperative programs in the U.S. at the college and technical institute level.

160. Federal Security Agency. (Now U. S. Department of Health, Education and Welfare, U. S. Office of Education.) *Vocational Technical Training for Industrial Occupations.* Vocational Division Bulletin No. 228. Washington: G.P.O., 1944, pp. 16–136. (Note: This bulletin is out of print but may be available in libraries and state departments of vocational education.)

Provides an extensive description of the nature of industry's need for technicians; outlines the technician occupations in various divisions of twenty-two industries; describes typical occupations in considerable detail.

161. ———. ———. *Vocational Technical Training for Industrial Occupations.* Vocational Division Bulletin No. 228. Washington: G.P.O., 1944, pp. 252–276.

Provides a brief overview of equipment needed for vocational-technical education; discusses industrial surveys to determine needs, surveys of existing educational facilities in the community, occupational analysis to determine curriculum content, determination of plant and equipment needs, and the planning of guidance and personnel services.

162. HARRIS, NORMAN C. "Technical Training for the Air Conditioning Industry." *Technical Education News:* Vol. 19, No. 4, April 1960, pp. 1–3.

A helpful beginning point for a person interested in developing a program of instruction for air conditioning technicians. Author

outlines the general conceptual framework for such a course as well as the specific subject areas covered during the two year course offered at Bakersfield College.

163 HOLDERMAN, K. L. "Some Facts About Our Technical Institute Instructors." *Technical Education News:* Vol. 11, April 1952, pp. 1–5.

Reports a study of instructors in eighteen technical institutes, with data on educational preparation, industrial experience, teaching experience, and teaching loads; gives data on part-time instructors in nine institutes.

164. HUDDLESTON, ROBERT H. "Cooperative Work-Study Programs." *Journal of the American Society of Training Directors:* Vol. 12, No. 9, September 1958, pp. 35–40.

This article discusses some vital problems encountered when embarking on a cooperative engineering educational program.

165. HUDSON, EDMUND. "Technical Education: The Challenge to Management." *The Manager:* Vol. 28, No. 3, March 1960, pp. 206–207.

A statement of management's responsibility in the educational processes concerned with developing technical personnel.

166. Illinois University. Bureau of Educational Research. *Vocational and Technical Education in Illinois: Tomorrow's Challenge.* Urbana: University of Illinois, 1960. 163 pp.

Report of a comprehensive study of the projected manpower training needs in Illinois and a series of recommendations for changes in the status educational program to meet the needs at the vocational and technical levels.

167. Professional Engineers Conference Board for Industry. *How to Train Engineers in Industry.* Executive Research Survey No. 4. Washington: National Society of Professional Engineers, 1955. 72 pp.

Reports the results of a survey inquiry about the in-service training practices of two hundred companies employing engineers. Data reported from large, medium, and small companies.

168. RAPPAPORT, BERNARD F. "Technical Electronics at Levittown." *Industrial Arts and Vocational Education:* Vol. 49, No. 2, February 1960, pp. 41–44.

Article describes steps taken by Levittown, N.Y., school board to set up a technical electronics program at the high school level. Program objectives, procedure for student selection, procedure for teacher selection, and curriculum evaluation are among the topics discussed.

169. SMITH, HAROLD T. *Education and Training For The World of Work.* The Upjohn Institute for Employment Research, 1963, Kalamazoo, Michigan. 165 pp.

A comprehensive analysis of the needs for vocational education in Michigan and an outline of a plan to meet the needs. The report is a model for similar studies in other states. It explores administration and financial resources which are available and draws heavily on the experience of other states where vocational education programs had been developed.

170. TRASIN, WALTER. "How to Develop an Auto Mechanics Course." *Industrial Arts and Vocational Education:* Vol. 49, No. 1, January 1960, pp. 42–46.

Although intended primarily as a guide to organizing and administering an auto mechanics course at the high school level, this article presents a number of ideas which could profitably be applied in a similar industrial training situation.

171. U.S. Congress. Subcommittee on Economic Stabilization of the Joint Economic Committee. *Instrumentation and Automation.* Hearings, 84th Congress, 2nd Session. Washington: G.P.O., 1957, pp. 12–15 and 104–105.

Points out inadequacies in the present situation with respect to personnel for instrumentation and automation, and suggests media through which needs might be met; outlines ways in which educational institutions can contribute; recommends provision for training three times as many technicians as engineers.

172. U.S. Department of Agriculture. *Improving the Performance of Retail Food Store Cashiers Through Better Training.* Marketing Research Report No. 48. Washington: G.P.O., 1953.

Reports a study of retail food store procedures for training cashiers. The study covers: (1) review of an existing training practice, (2) the development of an instructional method designed to be more effective, and (3) the results of a controlled experiment testing the relative effectiveness of the two methods of instruction. Although the study was confined to cashier training, the resulting techniques are adaptable to other training areas in the retail food field.

173. WAGNER, W. F., Jr. "Cooperative Engineering Education: How Program Works in Practice." *Factory Management and Maintenance:* Vol. 110, November 1952, pp. 104–109.

Describes the operation of a co-op engineering education program in an organization and outlines methods and procedures for setting up such a program.

174. WILSON, J. D. "Developing Apprenticeship-Training Curriculums." *Industrial Arts and Vocational Education:* Vol. 38, June 1949, pp. 219–223.

Describes a logical approach to the problems of developing trade apprenticeship curricula at the secondary school level; describes the role of apprenticeship committees.

175. The W. E. Upjohn Institute for Employment Research. *Education for a Changing World of Work.* Report of the Panel of Consultants on Vocational Education. Washington: U. S. Department of Health, Education and Welfare, Office of Education, 1963. 296 pp.

Evaluates recent developments in vocational education and training in Michigan and provides a comparison with similar efforts in other states. An exhaustive study which can be used as a model for further analysis of the role of educational institutions in the work-skill development process. Integrates state programs with efforts by the federal government under Manpower Development and Training Act and earlier legislation.

C. TECHNICAL TRAINING IN FOREIGN COUNTRIES

176. Canadian Department of Labor. *Acquisition of Skills.* Ottawa: Canadian Department of Labor, 1960. 68 pp. (Research program on the training of skilled manpower.)

A detailed report of the research conducted by the Canadian Department of Labor to evaluate the state of training for occupational skills in the country and to propose a program for development of a program to meet skilled manpower needs. Contains a series of manual skill training outlines.

177. KOROL, ALEXANDER G. *Soviet Education for Science and Technology.* New York: John Wiley, 1957. 513 pp.

Detailed discussion of scientific and technological training of Soviet youth; describes technicums and gives sample syllabus in mathematics and science; contains much material dealing with industrial and technical education of less than four-year college level.

178. ROSEN, HOWARD. "Technicians in the Labor Forces of Russia and America." *Monthly Labor Review:* Vol. 81, January 1958, pp. 1–5.

Compares the education and supply of technicians in the Soviet Union and the United States; shows practices used in the Soviet technicums; indicates ways in which technicians in the United States are trained, with the Armed Services as the largest training agency; calls for an examination of the American educational system to determine whether it is geared to meet the needs of our present industrial economy.

179. THOMPSON, D. C. "Training of Technical Apprentices and Laboratory Assistants," *Bacie Journal:* Vol. 3, February 1949, pp. 8–11.

Emphasizes level of ability required for apprenticeship candidates considered for training and development as laboratory technicians in England. Also concerned with related institution education, both technical and in preparation for management assignment.

180. VENABLES, P. F. R. *Sandwich Courses, for Training Technologists and Technicians.* London: Max Parrish and Co., 1959. 160 pp.

An extensive report of the application in Great Britain of "work study" or the cooperative educational schemes for technical training. The author deals with the rationale behind the development of such courses and describes in detail the integration of educational institutions and industry in the program. Attention is paid to the problems of curriculum construction and course administration.

V. SUPERVISORY TRAINING

A. IDENTIFICATION OF SUPERVISORY TRAINING NEEDS

181. BLAMBERG, SIEGMAR F. *The Substance of Supervisory Training.* Bulletin No. 10. Storrs: Department of Industrial Administration, School of Business Administration, University of Connecticut, 1961. 41 pp.

Report of a study designed to determine the range of subject matter content in supervisory training courses in industry and government and the distribution of subject matter in various courses. Author concludes from data that it is essential to develop a minimum, acceptable supervisory knowledge skill range around which the unique needs of individual groups can be determined.

182. BUCHANAN, PAUL C. "Factors Making for Effective Supervisory Training." *Personnel:* Vol. 34, No. 5, March–April 1958, pp. 46–53.

Reports a quantitative study of manager and supervisory responses to inquiry about the effect of a training program on supervisory performance.

183. EVANS, CHESTER F. *Supervisory Responsibility and Authority.* Research Report No. 30. New York: American Management Association, 1957. 63 pp.

Report of an extensive survey of the first-line supervisor's job in manufacturing industry. Describes the new dimensions of performance expected of the foreman, including technical duties associated with personnel responsibility. Survey questionnaire and method are reported in detail.

184. FLEISHMAN, EDWIN A., EDWIN F. HARRIS, and HAROLD E. BURTT. *Leadership and Supervision in Industry.* Bureau of Educational Research Monograph No. 33. Columbus: Ohio State University, 1955. 110 pp.

The major emphasis of this report is on program evaluation, but it also describes in detail the administration of a human relations course in a company training school for supervisors. The research results raise serious questions as to the degree of behavioral change

resulting from the training, particularly after the trainees returned to their work environments. This is an important contribution to "leadership" training literature.

185. HERZBERG, FREDERICK, *et al. Job Attitudes.* chap. 6, "Supervision and Job Attitude." Pittsburgh: Psychological Service of Pittsburgh, 1957, pp. 167–206.

Reports substantive studies revealing the influence of supervisory knowledge and behavior on employee attitudes. A vital resource for supervisory training program development.

186. LIKERT, RENSIS. *New Patterns of Management.* New York: McGraw-Hill, 1961. 299 pp.

A book devoted to important conclusions about organizational behavior theory based on research conducted at various levels of the managerial hierarchy. Provides substantive information relating supervisory styles to factors of motivation and productivity.

187. MANN, FLOYD C. "The Supervisor-Member of Two Organizational Families." *Harvard Business Review:* Vol. 32, No. 6, November–December 1954, pp. 103–112.

The author reports a research study in a public utility company in which he identifies the dual role of the first-line supervisor. Concludes that management must recognize the dual character of the foreman's job and create an environment which fosters two-way flow of communication and problem sharing.

188. ———. "Studying and Creating Change." *Research in Industrial Human Relations,* IRRA Series. New York: Harper and Brothers, 1957, pp. 146–167.

A report of research studies into methods for changing supervisory behavior at the workplace. Two studies involving supervisory training programs and one covering an organizational feed-back procedure are described in detail. The effectiveness of classroom human relations training and organizational feed-back are compared.

189. MINER, JOHN B. "The Effect of a Course in Psychology on the Attitude of Research and Development Supervisors." *Journal Of Applied Psychology:* Vol. 44, No. 3, June 1960, pp. 224–232.

A report of a research study into the attitude toward supervisory responsibility of a group of supervisors of research and development personnel. Describes the ten-session lecture course and the post-test used to measure attitudinal change. The lecture course was designed to foster a more favorable attitude toward the supervisory role.

190. MULLER-THYM, BERNARD J. "Reconstructing the Supervisory Job." *Personnel:* Vol. 30, March 1954, pp. 396–405.

The author states that in order to heighten his work satisfaction and effectiveness on the job, some "challenge" must be put back into

the foreman's job. Proposes that supervisory jobs be reconstructed, conferring real decision-making power and responsibility upon the foreman.

191. PERES, SHERWOOD N. "Performance Dimensions of Supervisory Positions." *Personnel Psychology:* Vol. 15, No. 4, Winter 1962.

Report of a study designed to identify performance characteristics of administrative and general supervisors. Provides information which can be useful in the supervisory training process.

192. TANNENBAUM, R., and W. H. SCHMIDT. "How to Choose a Leadership Pattern." *Harvard Business Review:* Vol. 36, No. 2, March–April 1958, pp. 95–101.

Deals with the spectrum of possible kinds of leadership style, between autocratic and democratic, which a manager might use in the supervisory process. Describes the factors which bear on whether one style or another is appropriate in a specific situation.

193. WHYTE, W. F. *Human Relations in the Restaurant Industry.* New York: McGraw-Hill, 1948. 378 pp.

A detailed analysis of the interpersonal situations occurring in an industry where direct customer contact is an essential characteristic of the work environment. The chapters devoted to human elements in supervision provide an excellent resource for supervisory training material.

194. ZALEZNIK, A. *Foreman Training in a Growing Enterprise.* Boston: Harvard University Graduate School of Business Administration, Division of Research, 1951. 232 pp.

A detailed report of a research project which examined the effect of a supervisory training program on foreman attitudes and behavioral changes. The study attempted to learn the compatibility of training objectives with the attitudes and purposes which foremen brought into the training environment. A wide divergence was observed and the effects are noted. The author concludes with a recommended training method for the "middle" man in the management organization.

B. STRUCTURE OF TRAINING PROGRAMS

195. ADAMS, HAROLD F. "Labor Relations Training for Supervisors." *Journal of the American Society of Training Directors:* Vol. 12, No. 11, November 1958, pp. 26–31.

Outlines a course on contract interpretation for supervisors. Emphasizes instructional method as well as the importance of appropriate management climate.

196. BAILEY, JOSEPH K. "The Goals of a Supervisory Training Program: A Study of Company Programs." *Personnel:* Vol. 32, September 1955, pp. 152–162.

What aspects of the supervisor's job are receiving most emphasis in supervisory training? The author has analyzed the scope and content of several representative company programs to identify the areas of major concern. These areas vary by company, reflecting that efforts are being made to fit training programs to specific company needs.

197. BAMBRICK, JAMES J. "Training Supervisors in Labor Relations." *Personnel:* Vol. 37, No. 6, November–December 1960, pp. 50–58.

A description of internal training programs which provide guidelines for helping supervisors to fulfill their labor relations responsibilities. Emphasizes that this kind of program is valuable only when coupled with a company desire to make the supervisor a bona fide representative for training supervisors of organized and non-union employees.

198. BENTZEN, E. C. "Forming Supervisory Development Plans." *Advanced Management:* Vol. 25, No. 8, August 1960, pp. 21–23.

A concise article concerning the inadequacy of supervisory training programs, and the causes for this inadequacy. The author explains the dilemma that the average supervisor generally finds himself in and analyzes the factors which contribute to this dilemma. The article contains a list of appropriate general principles for the training of supervisors. A sample training program is included.

199. FRENCH, J. R. P., Jr. "Role-Playing as a Method of Training Foremen." *Human Factors in Management.* Schuyler Dean Hoslett, ed. New York: Harper, 1946, pp. 99–116.

Article includes dialogue of an actual experience in the use of psychodramatic device for training. Contends that the method stimulates participation, involvement, and identification in such a way as to bring out the deeper emotional aspects of interpersonal relations.

200. GERLETTI, JOHN D., C. C. CRAWFORD, and DONOVAN J. PERKINS. *Nursing Home Administration: Training Materials for Administrators of Nursing, Boarding and Mental Hygiene Homes for the Aged.* Downey, California: The Attending Staff Association, 1961. 472 pp.

An example of an instructional manual which can serve as a model for other administrative units than the type for which it was

designed. A sound approach to the "how to" aspect of supervisory operation in a service organization.

201. JURGENSEN, C. E. "Foreman Training Based on the Test 'How Supervise.'" *Personnel Journal:* Vol. 28, September 1949, pp. 123–127.

Basic concepts on which a group supervisory training program was introduced where none had previously existed. The steps taken are outlined in detail and there is a description of how the test "How Supervise" by File and Remmers is used. Evaluative statements about use of the test in this case are limited.

202. KORB, L. DAVID. U.S. Civil Service Commission. *Training the Supervisor.* Personnel Methods Series No. 4. Washington: G.P.O., 1956. 126 pp.

Topics treated include determination of supervisory training needs, steps in building up course content, selection of training method, program administration, and program evaluation.

203. KRANTZ, IRWIN W. "Supervisory Training for Small Companies." *Personnel Journal:* Vol. 41, No. 2, February 1962, pp. 82–83.

A brief description of how a group of small companies in a non-metropolitan community organized a training program to develop supervisory skills.

204. LISBERGER, T. S. "The Case Method in Supervisory Training." *Advanced Management:* Vol. 20, February 1955, pp. 20–23.

The author suggests that the case method, used at the appropriate time in a training program, can get supervisors to examine their on-the-job behavior and learn to change behavior if necessary. Cites results achieved from the discussion process as well as its limitation.

205. McLARNEY, WILLIAM J. *Management Training, Cases and Principles* (3rd ed.). Chicago: Irwin, 1959. 534 pp.

A text for management and first-line supervisory training designed for use by training practitioners and students at the college level. Identifies the basic concepts of managerial skill and provides text material dealing with each concept, along with cases for study and discussion.

206. ONCKEN, WILLIAM JR. "Why Supervisory Training." *Supervisory Management:* Vol. 5, No. 8, August 1960, pp. 24–26.

Unless integrated by common objectives, it is often found that classroom principles and on-the-job practice are not compatible. The author suggests ways to bridge the gap between job and classroom.

207. PETITT, ALBERT E. "Mid-Management Does the Training." *Journal of the American Society of Training Directors:* Vol. 17, No. 1, January 1960, pp. 24–30.

Describes the program of a company, where the primary responsibility and authority for supervisor training has been delegated to operating middle managers. Steps in the planning and execution of the program are outlined, as are some of the expected results used in evaluating the program. List of topics chosen for coverage and a sample presentation are also included.

208. RITVO, MARIAN and PHYLLIS GORAM. "Meeting Resistance to Change." *Adult Leadership:* Vol. 9, No. 5, November 1960, p. 146.

Describes ten steps taken in one hospital to overcome resistance to in-service training programs for female supervisors. Material is based on a hospital experience.

209. STORM, WILLIAM J. "Training Supervisors in Budgetary Responsibilities and Controls." *Journal of the American Society of Training Directors:* Vol. 14, No. 4, April 1960, pp. 41–52.

A detailed plan to acquaint supervisors with budgetary responsibilities and controls. Article advises as to the selection of supervisors to be trained, the selection of the instructor, and the content of each of seven training sessions.

210. Technical Association of the Pulp and Paper Industry, Corrugated Containers Division. Production Committee. *The Training of Supervisors in Corrugated Box Plants: Ten Session Plans.* Loren F. Ashwood, Chairman, STAP Subcommittee. New York: Technical Association of the Pulp and Paper Industry, 1963. 50 pp.

A series of basic outlines of lesson plans for essentials of plant supervisory job training. This sample provides an elementary program from which training can be further expanded in an organization.

211. VON BLEICKEN, BLEICK. *Employee Training Handbook: A Guide for Training by Operating Management.* New York: Conover-Nast, 1953. 300 pp.

Lists components of the supervisory job and the practical techniques normally used in supervisory job instruction.

212. U.S. Department of Labor. *Safety Subjects.* Bulletin No. 67. Washington: G.P.O., 1956 (rev. ed.).

A comprehensive text covering the field of safety training. Presents fundamental aspects of a wide variety of safety subjects applicable in office, shop, and field construction operations.

C. JOB INSTRUCTOR TRAINING

213. BECKMAN, R. D. *How to Train Supervisors: Manual and Outlines for Determinate Discussion* (4th ed.). New York: Harper, 1952. 335 pp.

This book is one of the classics in the field of supervisory training and warrants a prominent place on the training bookshelf. It assumes that training supervisors and managers is essential in modern industry and proceeds to suggest ways of implementation and administration. Much emphasis is placed on the methods developed in TWI and considerable attention is devoted to job instructor training and job relations training.

214. CHRISTIAN, ARTHUR H. "Safety Training: Concentrate on the New Employee." *Supervisory Management:* Vol. 5, No. 10, October 1960, pp. 7–13.

Studies have demonstrated that it is the new or transferred worker who most urgently needs full safety training. The article is a good refresher course in basic safety practices, and provides some tips as to better methods of training new employees on safe work habits.

215. U.S. War Manpower Commission. Bureau of Training, Training Within Industry Service. *The Training Within Industry Report, 1940–1945.* Washington: G.P.O., 1945. 330 pp.

Since a substantial volume of supervisory training derives from the TWI "J" programs, this report is important as a source document.

D. NEW SUPERVISOR TRAINING

216. CASTLE, P. F. C., and F. I. GARFORTH. "Selection, Training, and Status of Supervisors." *Occupational Psychology:* Vol. 25, No. 2, April 1951, pp. 109–123. (See also, July 1951, pp. 166–180; October 1951, pp. 225–232.)

Three articles discussing research into the selection, training, and status of supervisors carried on under the auspices of the National Institute of Industrial Psychology in Great Britain. Each article reports the findings and conclusions from inquiry into the separate areas noted in the title.

217. Ministry of Labor (Great Britain). *Report of the Committee on the Selection and Training of Supervisors,* London: Her Majesty's Stationery Office. (New York: American Agents—British Information Services.)

A study of the progress made in British industry in the selection and training of first line supervisory personnel, noting also the

absence of progress in some areas. The report covers private industry, nationalized industry, and the appropriate role of educational institutions in the selection and training process.

218. National Industrial Conference Board, Inc. *Developments in Supervisory Training*. Studies in Personnel Policy No. 124. New York, 1952. 84 pp.

A summary description and analysis of philosophy, various approaches, and techniques evident in supervisory training programs. Examples of what selected companies are doing to train new supervisors as well as incumbents.

E. SUPERVISORY SELECTION

219. HUTTNER, L., and R. A. KATZELL. "Developing a Yardstick of Supervisory Performance." *Personnel:* Vol. 33, No. 4, January 1957, pp. 371–378.

Describes an application of the "forced choice" rating method in the process of selecting and training supervisory personnel. Suggests that the device has the advantage of across-the-board comparability in multiplant company operations.

220. ROWLAND, V. K. "Progress to Date in Executive Development." *American Management Association*. Personnel Series No. 145. New York, 1952, pp. 3–19.

Contains a comprehensive status report on supervisory development programs and techniques, and an analysis, with recommendations, of methods for supervisory selection and training.

221. TAYLOR, JACK W. *How to Select and Develop Leaders*. New York: McGraw-Hill, 1962. 255 pp.

Written in a popular and readable style, this book can serve a useful purpose in first-line supervisor training. It is complete with anecdoted illustrations covering leadership, selection, testing and training methods.

VI. MANAGEMENT INVENTORY AND EXECUTIVE DEVELOPMENT

A. METHODS AND TECHNIQUES

222. American Management Association. *Management Education for Itself and Its Employees,* part 2, "A Survey of Management Development," by Joseph M. Trickett. New York, 1954. 61 pp.

Reports what American business organizations of various types and sizes are doing or planning to do to train their management employees; the techniques, methods, and information used in such training; and company attitudes as to whether training is effective.

223. ———. *Management Education for Itself and Its Employees,* part 2, "Case Studies in Management Development," by Robert G. Simpson. New York, 1954. 140 pp.

This report covers management training programs and practices of ten selected companies representing various industries.

224. ANDLINGER, G. R. "Business Games." *Harvard Business Review:* Vol. 36, No. 2, March–April 1958, pp. 115–125.

A detailed description of the simulation technique for training managers in the skills of decision making. Includes the pattern for setting up the game, procedure for participants, and the role of the umpire.

225. ———. "Looking Around: What Can Business Games Do?" *Harvard Business Review:* Vol. 36, No. 4, July–August 1958, pp. 147–160.

An appraisal of the use and value of simulation and business games in the training of supervisors and managers. The author raises critical questions and provides answers as to how gaming devices can be used effectively in training.

226. ANDREWS, KENNETH R. "Executive Training by the Case Method." *Harvard Business Review:* Vol. 29, No. 5, September 1951, pp. 58–70.

Describes and evaluates two company experiments in the use of cases for supervisory and management training. Emphasizes the individual characteristics of the two programs, concluding that the case method

utilization must be adapted to the unique circumstances of particular organizations. Procedural techniques are identified and described.

227. ARGYRIS, CHRIS. *Executive Leadership: An Appraisal of a Manager in Action.* New York: Harper, 1953. 139 pp.

A basic source book for supervisory and management training. Supervisory training and management development programs frequently base their assumptions on concepts drawn from broad observations of the leadership role. The author has taken a pin-point look and reports the characteristic features that distinguish a particular leader and his style of leadership.

228. ASHWORTH, KENNETH H. "Mid-Career Management Courses." *Advanced Management:* Vol. 25, No. 8, August 1960, pp. 23, 29.

A brief article which examines faults which typical mid-career executives are very likely to possess. The author contends that these faults can be remedied and re-emphasizes the value of good management development courses at this stage of a man's career.

229. BARRY, F. GORDON, and C. G. COLEMAN, JR. "Tougher Program for Management Training." *Harvard Business Review:* Vol. 36, No. 6, November–December 1958, pp. 117–125.

What can happen when a manager training program is conceived of as an "obstacle course," involving homework study, intensive participation, and final grades, is described and evaluated by the authors. They conclude that although all the evidence is not yet in, this method as compared to the conventional "panoramic view" holds promise and warrants more experimentation.

230. BECKLEY, D. K. *Executive Training in Department Stores.* Boston: Simmons College, 1952. 62 pp.

The term "Training Squad" has become identified with managerial training in retail and specialty stores. This monograph brings together concepts and practices essential to an appreciation of the various methods and techniques employed in store training. Although designed around retailing, the Training Squad device can be applied in other work environments for management training.

231. BELLOWS, ROGER, THOMAS Q. GILSON, and GEORGE S. ODIORNE. *Executive Skills: Their Dynamics and Development.* Englewood Cliffs, New Jersey: Prentice-Hall, 1962. 344 pp.

A management text, suitable for organizational in-service training, which takes the skills and traits of successful managers and exposes them to conceptual sources from the behavioral sciences.

232. BENNETT, WILLARD W. *Manager Selection, Education and Training.* New York: McGraw-Hill, 1959. 210 pp.

Into the welter of literature on management development, the author has introduced his conceptual scheme to provide the basis for an adequate program. In the pattern, three components of the scheme are identified: (1) competent selection, (2) intellectual conditioning, and (3) supervised training on the job. Although the general theory around which the book is designed may not be acceptable to all, it does provide a take-off for comparison and analysis. Each component of the process is explained in detail in terms of the professional character of the manager's job.

233. BOGARD, HOWARD M. "Union and Management Trainees, a Comparative Study of Personality and Occupational Choice." *Journal of Applied Psychology:* Vol. 44, No. 1, 1960, pp. 56–63.

A report of a research study into the factors which appear to be most influential in directing entry employees at the low managerial levels to select the management orbit or union orbit as a career choice.

234. CLAY, HUBERT, and LEIF OLSEN. "Internships in the Development of People." *Personnel Journal:* Vol. 40, No. 2, June 1961, pp. 58–63.

Outlines a plan for utilizing the managerial internship device for bringing executives along to optimal individual development. Describes the appropriate role of the supervising manager and of the management development specialist or consultant in the organization.

235. DOOHER, M. JOSEPH, and VIVIENNE MARQUIS. *The Development of Executive Talent.* New York: American Management Association, 1952. 576 pp.

A handbook of executive development approaches, techniques, and cases drawn from operating experiences. The authors in the text represent specialists in areas of management training in various companies. Seventeen cases describing company programs in detail are included to illustrate the techniques covered in the early chapters. This is a major resource book in the field.

236. EITINGTON, JULIUS E. "Do it Yourself: The Key to Leadership Training." *Personnel Administration:* Vol. 19, No. 5, September–October 1956, pp. 34–41.

A simple, helpful guide outlining the desirable role of the organization and the individual in achieving the maximum executive self-development.

237. "Executive Development." (A symposium by recognized authorities in the field.) *Advanced Management:* Vol. 18, January 1953, pp. 5–36.

A series of papers by top-flight authorities covering the subject, from evidence of need to the execution of techniques. An excellent summary of the basic considerations essential to an understanding of the elements of executive development.

238. "Executive Development." *Chemical and Engineering News:* Vol. 31, March 1953, pp. 1172–1174.

Summary article based on panel discussion by executives from the chemical industry, consultants, and university personnel interested in the field. Represents a balance in views and suggests that the emphasis of greatest importance should be that of assisting executives to develop themselves. A valuable source for program development, ideas, and concepts.

239. GUETZKOW, H., G. A. FOREHAND, and B. J. JAMES. "An Evaluation of Educational Influence on Administrative Judgment." *Administrative Science Quarterly:* Vol. 6, No. 4, March 1962, pp. 483–501.

Reports the differing effects of an executive development program on two groups of government administrators. Authors attribute the behavior changes after the development program to the organization climate.

240. HABBE, S. "Building New Executives." *Conference Board Management Record:* Vol. 12, April 1950, pp. 132–134.

A report of developments in management inventory and development at a time when many companies first embarked on planned programs. Reflects the assumption on which executive development was established when only a small percentage of companies studied had engaged in formal programs.

241. HOUSE, R. J. "Managerial Development is a Game." *Harvard Business Review:* Vol. 41, July 1963, pp. 130–143.

Author presents the importance of change to the success of an executive development program. He outlines basic areas where change and modifying conditions must occur. Provides a fundamental insight into those conditions and circumstances which determine the effectiveness of executive development programs.

242. HOWER, RALPH M., and CHARLES D. ORTH. *Managers and Scientists.* Boston: Harvard University, 1963. 323 pp.

Assesses the specific problems of developing managers to meet the growing administrative needs of research and development functions in organizations. Following an introductory text on administration concept and theory, the book provides a series of illustrative cases drawn from industry.

243. "The Impact of Science on Management in the Future." *Electrical Journal:* Vol. 155, Nov. 11, 1955, pp. 1588–1591.

Deals with the implications of technological change growing out of data-processing upon the selection and training of executives in the future, and suggests that industry can no longer wait for the "born manager" to emerge.

244. JASINSKI, FRANK J. "Adapting Organization to New Technology." *Harvard Business Review:* Vol. 37, No. 1, January–February 1959, pp. 79–86.

This article discusses the problems growing out of the social changes in an organization resulting from a changing technology. Emphasizes the training implications for supervision and management.

245. JENKS, JAMES M. "The Development of Middle Management Executives." *Advanced Management:* Vol. 25, No. 3, March 1960, pp. 23–25.

Author explains the need for middle management development and presents the advantages of in-plant development programs. One such internal approach is described and discussed.

246. JONES, MARGARET L. "Executive Development Takes a New Step." *Dun's Review and Modern Industry:* September 1953, pp. 61–63.

Describes a situation in which the organizational climate provides opportunity for risk-taking and consequent learning by individual supervisors and managers. An example of planned on-the-job training for management development.

247. ———. "How's Your Climate." *Dun's Review and Modern Industry:* October 1953, pp. 70–72.

Article suggests that managers are developed in an organization by the performance of their supervisors and the extent to which they use formal appraisal results in their day-to-day concern to improve the managerial skills of subordinates

248. KEPNER, CHARLES H., and BENJAMIN B. TREGOE. "Developing Decision Makers." *Harvard Business Review:* Vol. 38, No. 5, September–October 1960, pp. 115–124.

A novel and original method of training in decision-making skills is described in the article. Experience appears to demonstrate that the method can help managers acquire new knowledge and skills, and facilitates putting the new skills into practice. The approach allows the trainee to see and evaluate their results more rapidly than with older methods.

249. KIRCHNER, WAYNE K. "Needed: A Return to Reality in Management Selection and Development." *Personnel Journal:* Vol. 42, No. 7, July 1963, pp. 341–345.

Examines formalized processes for selection and development of

managerial personnel. Concludes that attention might be given to providing an environment in which self-development can occur most naturally.

250. MACE, M. L. *The Growth and Development of Executives.* Boston: Harvard University Graduate School of Business Administration, 1950. 200 pp.

The author examines the policies, formal programs, informal approaches, and practices of a group of manufacturing companies and reports his findings and interpretations. The results provide a logical sequence of the essential pattern for executive development. Areas covered include: the requirements of executive positions with emphasis on a procedure for defining management job specifications; appraisal, inventory, replacement tables, and executive personnel files; psychological testing in the selection and development process; planned progression and job rotation; and coaching and counselling. The most incisive chapters deal with the problems of coaching and getting managers to assume their coaching responsibilities. The formal planned executive development program is seen as the device for implementing the development of competent managers in an organization.

251. McGREGOR, DOUGLAS. *The Human Side of Enterprise.* New York: McGraw-Hill, 1960. 24 pp.

In this book the author elaborates on his description of manpower management assumptions in what he calls Theory X and Theory Y. The content is grounded in behavioral science theory and is essential reading for the training specialist who deems his responsibility to be that of influencing favorably the human resources of an organization.

252. MAHONEY, THOMAS A. *Building the Executive Team: A Guide to Management Development.* Englewood Cliffs, N. J.: Prentice-Hall, 1961. 278 pp.

A basic guide to management development, emphasizing the elements which have become normally acceptable in the process: organization analysis, recruiting, appraisal, development, and referral. Covers the reasons for various appropriate actions as well as methods for implementing.

253. MAHONEY, THOMAS A., THOMAS H. JERDEE, and ALLEN N. NASH. *The Identification of Management Potential.* Dubuque, Iowa: William C. Brown Company, 1961. 79 pp.

The authors state that although much attention has been accorded to management development, little is really known about the components of the process. This book reports a study of the identification of management potential. The purpose of the research was to find reliable predictors of managerial effectiveness and to develop a procedure for such prediction. The research design is described in detail.

254. OHMANN, O. A. "Developing Managers in a Functional Type of Organization." *Management Record:* Vol. 22, No. 4, April 1960, pp. 27–30.

The author discusses the procedures used by Standard Oil of Ohio in developing managers. The company, organized on a functional basis, faces problems in this area of development not ordinarily encountered in enterprises utilizing other forms of organization. The article is the last in a series of three. The series provides a brief view of the development of managers in differing organizational types and reports some good "tips" to persons involved in similar acitvities. (Related to 267 and 268, below.)

255. RACE, H. H. "General Electric's Approach to Manager Development."*Personnel Administration:* Vol. 18, No. 6, November 1955, pp. 13–20.

This article describes GE's philosophy, approach, and purposes in the establishment of their Management Research and Development Institute. Major emphasis is given to the research involved in determining how the company might aid managers to develop themselves.

256. RANDALL, R. L. "Get More from Your Training." *Nation's Business:* Vol. 48, June 1960, pp. 42–43, 94–95.

The article lists four considerations that an organization must bear in mind to insure that its outlay for management development courses will bring an optimum return. The article discusses: selecting the right course or courses, selecting the right students, preparing the students, and utilizing the students' knowledge when they return to their jobs.

257. RANDLE, C. WILSON. "How to Identify Promotable Executives." *Harvard Business Review:* Vol. 34, May–June 1956, pp. 122–134.

This report is based on a research project in which three thousand executives were studied to determine the characteristics of promotable executives. Concludes that certain qualities indicate promotability in all executives, while other qualities are useful for distinguishing promotable executives at given management levels or in specified functional areas.

258. REILLEY, E. W., and B. J. MULLER-THYM. "Executive Development Today for Increased Profits Tomorrow." *Personnel:* Vol. 24, May 1948, pp. 401–412.

This article is a fundamental guide for anyone interested in embarking on an executive development program. Outlines patterns for forecasting executive needs, use of position descriptions, identifying strengths and weaknesses for developments by appraisal, and planning for individual development.

259. ROSEN, JHALMAR, and CHARLES G. WESNER. "Motivation in Management." *Journal of Applied Psychology:* Vol. 44, No. 6, December 1960, pp. 386–392.

In the process of establishing a training curriculum for managers, it is important to know what common areas of subject content might be most useful. This study was designed to determine whether or not there is a commonality of motivation among the various levels of management with regard to what managers want from their jobs and the importance they attach to job conditions. The findings point to some *directions* which can contribute to manager training and development.

260. SAMPSON, R. C. "Train Executives While They Work." *Harvard Business Review:* Vol. 31, November 1953, pp. 42–54.

Article contains a plan for organizing supervisory and management training around the assumption that the individual is interested in and capable of self-development. Suggests that a form of on-the-job training is a suitable technique for meeting the development needs of the individual and the management replacement needs of a company.

261. SARGENT, D. S. "Executive Development Program Using Job Rotation." *Personnel Journal:* Vol. 31, No. 11, April 1953, pp. 405–409.

A description of Consolidated Edison's Executive Development Program which relies basically on job rotation to develop the generalists required for top management positions. According to the author, his company's loss of executives through age and disability retirement is balanced by available replacements under age 50, two-thirds of whom are EDP graduates.

262. STEGGERT, FRANK X. "Some Factors Affecting Executive Development." *Personnel Administration:* Vol. 26, No. 3, May–June 1963, pp. 35–45.

Details research which examines several of the basic factors in an organizational climate which influence the effectiveness of executive self-development activities. Studies conducted at University of Chicago Center for Programs in Government.

263. THOMAS, DAVID. "The Case for Planned Development." *Personnel:* Vol. 38, No. 2, March–April 1961, pp. 8–17.

This article makes a claim for planned management development as opposed to a "laissez-faire" approach for generating managerial competence in organizations. Experiences are cited from various companies. A list of items is provided for guidance prior to embarking on a planned program.

264. THOMPSON, WALTER A. "Developing Managers on the Job." *The Business Quarterly:* Vol. 25, No. 1, Spring 1960, pp. 25–33.

The article is based on research done to discover what factors were beneficial and influential in developing managers. This survey was conducted with groups attending a university management training course.

265. TRICKETT, JOSEPH M. "Fulfilling Individual Needs in Management Development." *Personnel:* Vol. 33, No. 6, May 1957, pp. 520–526.

The author provides a series of guiding concepts for use in training managers to coach and assist the development of subordinates. The concepts are drawn from a situation in which the assumptions are made that (1) the individual is responsible for his own development and (2) the boss is responsible for promoting such self-development.

266. ———. "Something New in Management Development." *Journal of the American Society of Training Directors:* Vol. 13, No. 2, February 1959, pp. 3–10.

The author assesses the validity of management development to improve present performance and management development to prepare for higher-level promotions, and concludes that although both are important, primary attention in an organization should be given to the former purpose.

267. VERITY, WILLIAM. "Developing Managers in an Organization in Transition." *Management Record:* Vol. 22, No. 4, April 1960, pp. 23–27.

The author explains the particular conditions in which managers must be developed at Armco Steel Company, an organization in the process of change. Describing the program used presently at Armco, he explains what the program is aimed to do, how the program was adjusted to meet the changing situation in the company, and the policy of the company concerning present and future needs in the area of management development. (Related to 254 and 268.)

268. WELLFORD, R. CARTER. "Developing Managers in a Product-Type Organization." *Management Record:* Vol. 22, No. 4, April 1960, pp. 20–23.

This article is the first in a series of three, all of which are based on positions taken in a discussion entitled "Developing Managers for Decentralized Operations." The author enumerates the problems encountered in developing managers at the Du Pont Company, identified as a product-type organization. (Related to 254 and 267.)

269. WESCHLER, I. R., M. A. KLEMES, and C. SHEPHERD. "A New Focus in Executive Training." *Advanced Management:* Vol. 20, May 1955, pp. 19–22.

The authors have had experience in the use of sensitivity training with executives and report what they believe are the values of

this training method. They concude that "reports from both trainees and co-workers indicate that this method of training does lead to greater human relations know-how." This article is valuable for those who are interested in exploring the clinical approach to training and developing managerial skills.

270. WHITE, WILFORD L. "Small Business Management Development." *Adult Education:* Vol. 10, No. 2, Winter 1960, pp. 85–89.

An account of the management development programs organized and administered under the joint control of the Small Business Administration and the extension divisions of various universities and other organizations. Cost curricula and other program aspects are discussed, and the steps for initiating similar programs are outlined.

271. "Why All the Fuss about Executive Development?" *Chemical Engineering:* Vol. 60, February 1953, p. 248.

This article reports results of a survey of the management development programs of twenty companies engaged in engineering and technically-related operations. The programs of ten companies are described in detail. It is revealed that although purposes are the same for all companies, the individual programs employ techniques and methods to suit the unique character of their organizations.

272. WIORA, A. P., and J. W. TREGO. "An Experiment in Management Development." *Personnel:* Vol. 38, No. 3, May–June 1961, pp. 25–30.

Cites the favorable experience where the line manager initiated and presented a development for his department. Stresses the importance of the manager's interest in subordinate development.

273. ZIMMERMAN, JOHN W., and SEYMOUR LEVY. "Decision Simulation for Top Management Training." *Journal of the American Society of Training Directors:* Vol. 14, No. 5, May 1960, pp. 3–11.

Article describes an executive development program in decision making used by a major firm undergoing organizational decentralization. The program is based on business simulation. Several observations concerning effective managerial decision-making are included.

B. PERFORMANCE APPRAISAL

274. DAFFERN, GEORGE N. *Management in a Changing World.* New York: Simmons-Boardman Publishing Corporation, 1960. 121 pp.

This book is the result of a serious assessment of the manager

development problems in the railroad industry in the U. S. and Canada. The fundamental reasons for concern about managerial competence in the industry are explored and suggestions for a job-oriented appraisal technique are provided. Although written from a railroad industry point of view, the context of the book can be applied generally.

275. FOREMAN, CHARLES W. "Developing Managers for Decentralized Operations." *Management Record:* NICB, Vol. 22, No. 4, April 1960, pp. 19–30.

Summary of a panel discussion assessing current practices in appraisal and development of supervisors and managers in organizations. Panel members take a critical look at management development procedures and conclude that the trend is toward more concern for evaluation of performance by planned objectives.

276. GRAY, C. E. "Appraising Professional Personnel: One Company's Experience." *Personnel:* Vol. 33, No. 5, March 1957, pp. 442–451.

Describes a technique for personnel evaluation based on the concept that evaluation is a continuing process in which appraisers are active participants. The method implements the concept of self-development.

277. KELLEY, PHILIP R. "Reappraisal of Appraisals." *Harvard Business Review:* Vol. 36, No. 3, May–June 1958, pp. 59–68.

The author raises serious doubt that conventional appraisal patterns and devices are effective and useful in the management development process and cites reasons for the doubt. Suggests that an "organizational review" can provide a more realistic approach to performance improvement and salary administration. Major emphasis is on evaluating performance problems and not people alone.

278. KELLOG, MARION S. "New Angles in Performance Appraisal." *American Management Association,* Management Report Number 63. New York, 1961, pp. 93–102.

Recognizing the critical function of appraisal in the manager development process, the author studies the elements involved in a series of workshops in his company. He was able to identify the perceptions of the appraiser and appraisee. The insights gained tend to place emphasis on the appropriate techniques which were found to be effective.

279. LIKERT, RENSIS. "Motivational Approach to Management Development." *Harvard Business Review:* Vol. 37, No. 4, July–August 1959, pp. 75–82.

This article urges a change in the pattern of relationship between supervisor and subordinate in the essential performance appraisal and coaching process. The author cites examples of development

failures growing out of conventional methods. Recommends an approach which provides for goal-setting by manager and subordinate, and evaluation and coaching based upon agreed-upon performance goals and objectives.

280. McGREGOR, DOUGLAS. "An Uneasy Look at Performance Appraisal." *Harvard Business Review:* Vol. 35, No. 3, May–June 1957, pp. 89–94.

A critical assessment of supervisory and management performance appraisals and a recommended plan for a new and different approach. Typical appraisal plans have been built around factors of personality and have resulted in resistance to the coaching interviews by both the appraisee and the boss. McGregor's new approach suggests that stress on agreed-upon performance goals will result in more effective subordinate development and acceptance of the coaching role by the boss.

281. MACHAVER, WILLIAM V., and WILLARD E. ERICKSON. "A New Approach to Executive Appraisal." *Personnel:* Vol. 35, No. 1, July–August 1958, pp. 8–14.

Authors provide an illustration of the use of the field review method for personnel appraisal in which a narrative description rather than the conventional checking form is employed. In this instance the personnel specialist prepares the boss for counseling through role-playing.

282. MAHONEY, THOMAS A., THOMAS H. JERDEE, and STEPHEN J. CARROLL. *Development of Managerial Performance.* Cincinnati: Southwestern Publishing Company, 1963. 67 pp.

Following a brief introduction of some of the recent contributions to management theory, the authors report on a research project dealing with managerial job performance. They contend that important clues to management development are to be found in performance analysis. This is a vital study which opens one more area of empirical evidence for the student of executive and managerial performance.

283. MAYFIELD, HAROLD. "In Defense of Performance Appraisal." *Harvard Business Review:* Vol. 38, No. 2, March–April 1960, pp. 81–87.

The author analyzes accepted concepts about the performance appraisal process at the management level and finds them unconvincing on the basis of his experience. Suggests that the conventional method for appraisal works admirably if appraisers are trained in this critical function and if management, through a process of regularizing and scheduling, requires that periodic appraisals and discussions with subordinates are conducted.

284. PATTON, ARCH. "How to Appraise Executive Performance." *Harvard Business Review:* Vol. 38, No. 1, January–February 1960, pp. 63–70.

Appraisal of performance is an integral part of the management development process. The author outlines a pattern for judging performance on the basis of criteria which relate individual targets to long and short range goals of an enterprise. Samples of planned performance targets are illustrated.

C. *UNIVERSITY PROGRAMS*

285. American Management Association. *Management Education for Itself and Its Employees,* part 1, "Management Education in American Business," by Lyndall Urwick. New York, 1954. 136 pp.

A summary and analysis of college and in-service management education programs, stressing historical development of such programs in the U. S. Constitutes one part of a study conducted under the auspices of The Fund for Adult Education. Valuable source for theories and philosophies which underlie the patterns of management education and training.

286. ANDREWS, KENNETH R. "Reaction to University Development Programs." *Harvard Business Review:* Vol. 39, No. 3, May–June 1961, pp. 116–134.

A comprehensive report on a study conducted to determine the utility for participants of university courses in executive development. Concludes that such programs are an important resource for supplementing company programs. Re-emphasizes the continuing need to improve instruction on the part of universities engaging in such courses and for companies to select men carefully to gain the most value from involvement.

287. ANSHEN, MELVIN. "Better Use of Executive Development Programs and Experience of Companies Sending Executives to Management Training Courses." *Harvard Business Review:* Vol. 33, November–December 1955, pp. 67–74. (Includes Bibliography).

According to this author: "The administrators and faculty members of university-sponsored executive development programs have learned, through observation and discussion, a good deal about management's mistakes in using these programs." The citations which follow are significant in demonstrating that embarking on the use of this training device should be done by a company only after asking these questions: Is it profitable for one company to send men to the programs? How can we improve the selection of men who attend? How should we handle the men who return? How can we appraise what the courses have done for our men? Top manage-

ment does not actually know whether it is getting its money's worth from such programs.

288. ———. "Executive Development: In-Company vs. University Programs." *Harvard Business Review:* Vol. 32, September–October 1954, pp. 83–91.

A careful analysis of the factors the Bell System took into account when determining whether to train their executives at home or send them to university programs. It is suggested that program appraisal results raised the question as to whether in-company programs at this level serve the same objectives as university programs. Important additional questions are raised for those concerned with executive development.

289. BRICKER, GEORGE W., JR. "University Executive Development Programs." *Michigan Business Review:* Vol. 12, No. 1, January 1960, pp. 6–12.

A comprehensive study of executive development programs at 50 or so U. S. and Canadian universities. Discusses methods of instruction, curricula, type and amount of work required, and trends in these areas. Discusses "business games" and other teaching aids. Offers suggestions for best results from development programs.

290. CLEARY, M. D. "Which University Program for Executives?" *American Business:* Vol. 24, No. 7, p. 22.

Describes the factors and criteria which a management must consider as it anticipates sending men to university management training courses. Also lists and discusses those matters which should be taken into account to prepare a man to get the most out of such courses.

291. FIELDEN, JOHN S. "Thinking Ahead: Business Education." *Harvard Business Review:* Vol. 37, No. 6, November–December 1959, pp. 35–192 *passim.*

An excellent summary of some of the major findings of the Ford Foundation (Robert A. Gordon and James E. Howell) and Carnegie Corporation (Frank C. Pierson) studies of business education in U. S. colleges and universities. The basic problems posed, alternative and recommended solutions, and other comments made in the studies are reported.

292. GORDON, ROBERT A. and JAMES E. HOWELL. *Higher Education for Business.* New York: Columbia University, 1959. 491 pp.

A study of American business education. (See also *The Education of American Businessmen,* by Frank C. Pierson, a similar study published in the same year.) In this extensive and critical evaluation of how people are educated for business, the author explores the types of skills and abilities required in business. He concludes

that the following are necessary: analytical ability; judgment; skill in interpersonal relations; the ability to accept responsibility and to make decisions; general administrative skills; breadth and flexibility of mind; imagination; facility in personal communication; and strong personal motivation. This study points up the complexity of the task of evaluating an educational activity, but even more important, it provides a wealth of material for planning and conducting management training programs.

293. HABBE, S. "Executives Go to School (Long-Term Programs at Various Universities)." *Management Record:* Vol. 12, February 1950, pp. 55–56.

Estimates and descriptions of some of the early university programs for training executive personnel. Subsequently, the kind of program described has proliferated across the nation, but the aims and purposes of the originators of the schools for business executives established in the university setting have remained basic.

294. HUNERYAGER, S. G. "An Evaluation of University Executive Programs." *Journal of the American Society of Training Directors:* Vol. 14, No. 3, March 1960, pp. 37–43.

What are the values in university executive development programs? This report reveals that there are advantages as well as disadvantages in sending executives off to college to develop management knowledge and skill. Concludes that companies expect universities to supplement on-the-job development.

295. National Industrial Conference Board, Inc. *Executive Development Courses in Universities.* Studies in Personnel Policy No. 160. New York, 1957. 85 pp.

An analysis of the purposes of university courses for managers and a detailed description of thirty-two such courses in United States and Canadian universities. Each program is identified with respect to course content, admission requirements, cost, and the major teaching-learning process employed.

296. PIERSON, FRANK C. *The Education of American Businessmen.* New York: McGraw-Hill, 1959. 740 pp.

A major study and evaluation of university-college programs in business administration. The author recommends proposed curricula at both the undergraduate and graduate level. Specific subjects such as accounting, finance, marketing, production, personnel management, and industrial relations are discussed together with managerial decision-making "as an organizing concept." The role of business schools, engineering colleges, arts colleges, junior colleges, evening extension programs, and university programs for practicing executives are evaluated. There is also one chapter on company management development programs.

297. POWELL, REED M. "Business Looks at University Executive Development Programs." *Business Topics:* Vol. 10, Autumn 1962, pp. 57–65.

Describes the results of a comprehensive survey of participants' reactions to university sponsored executive development programs. Information was gathered through the use of questionnaires and interviews. Author concludes that such programs have a positive value for the participants.

298. WHITEHILL, A. M., JR. "Executive Training, Harvard Style." *Personnel Journal:* Vol. 29, May 1950, pp. 3–7.

A detailed description of the genesis and growth of the Harvard Advanced Management Program for business executives.

D. MANAGER DEVELOPMENT OF FOREIGN NATIONALS

299. ANSTEY, E. *Staff Reporting and Staff Development.* London: Allen & Unwin, 1961. 96 pp.

This report describes the current state of the art involving management development in Great Britain. Covers methods used in a Civil Service unit and in a major industrial operation.

300. BAKKE, E. WIGHT. *A Norwegian Contribution to Management Development.* Bergen: Fr. Beyer, N.D. 174 pp.

A description of the underlying philosophy, the methods and designs used, and the results of a top-rate executive development program conducted at the Norwegian School of Economics and Business Administration by the Administrative Research Foundation. A thorough analysis is done of the course itself and the milieu in which it was carried out. An interesting report on an important management development program experiment.

301. British Institute of Management. "A Conspectus of Management Courses." Fourth Edition, *Education and Training in the Field of Management.* London: Sir Isaac Pitman & Sons, 1960. 287 pp.

An exhaustive listing and description of programs and facilities for management education in Great Britain. Covers a wide range from short courses to degree offerings at Universities.

302. CUNYNGHAME, J. O. BLAIR. "A Norwegian Contribution to Management Development." *Personnel Management:* Vol. 42, No. 353, December 1960, pp. 265–272.

An evaluation of five courses for top managers at the Norwegian School of Economics and Business Administration. The author concludes that the courses give the student a better working knowledge of the organizational process and makes him more able to understand the problems faced by others in the organization.

303. DUFTY, N. F. "Management Education in Western Australia." *The Manager:* Vol. 28, No. 2, February 1960, pp. 130–131.

Outline of a comprehensive business and management program for low and middle-rank executives. The program described is noteworthy in that at least as much emphasis is placed upon business and management theory as upon applied business subjects.

304. DUSTAN, JANE, and BARBARA MAKANOWITSKY. *Training Manager Abroad.* New York: The Council for International Progress in Management (USA), Inc., 1960. 291 pp.

A brief comment on the scope and nature of management training overseas by governments, companies, consultants and educational institutions and an exhaustive list of sources of information regarding such training in the U. S. and other countries.

305. HARBISON, FREDERICK, and CHARLES A. MYERS. *Management in the Industrial World.* New York: McGraw-Hill, 1959. 413 pp.

A critical analysis of comparative management development needs and practices with particular reference to the problems of industrial development in economically under-developed countries. The authors devote the first part of the book to theories and concepts of management and the remainder to specific reports of management progress in various countries.

306. NEGLEY, GLENN R. "The British Administrative Staff College: Training for Executive Responsibility." *Personnel Administration:* Vol. 25, No. 1, January–February 1962, pp. 35–42.

Author reports the structure, administration, and philosophy of the world famous Henley School for Administrators.

307. PETER, HOLLIS W., and EDWIN R. HENRY. "Steps to Better Selection and Training for Overseas." *Personnel:* Vol. 39, No. 1, January–February 1962, pp. 18–26.

This perceptive article outlines the basic research steps required to improve the selection and training of overseas personnel. Details pertinent factors which bear on job success overseas as well as techniques for gathering information concerning these factors.

308. SHEARER, JOHN C. *High-Level Manpower in Overseas Subsidiaries.* Industrial Relations Section, Department of Economics and Sociology, Princeton University, 1960. 161 pp.

Report of a study of selection and development of managerial personnel with particular reference to Latin American countries. Is concerned with U. S. personnel as well as with nationals of foreign countries. Comments on and evaluates practices of U. S. companies with respect to their handling and training of management personnel in overseas assignments.

309. WAALER, ROLF. *Management Development: A Norwegian Experiment.* Boston, Mass.: Harvard University, Graduate School of Business Administration, 1962. 6 pp.

Reports on the methods used and the results achieved in the process of conducting a series of management development courses in Norway. The courses were based on U. S. experience, blended with the particular needs of the business community of Norway.

310. WELLENS, JOHN. "Giving Youth Its Opportunity." *The Manager:* Vol. 28, No. 8, August 1960, pp. 584–586.

Explaining the increasing need for competent, trained managerial and technical personnel in England, the author calls for a National Industrial Training agency to fill this need.

311. WIKSTROM, WALTER S. *Developing Better Managers: An Eight-Nation Study.* New York: National Industrial Conference Board, 1961. 182 pp.

Report examines the scope and status of manager development in countries experiencing various degrees of industrialization. Descriptions of the state of the art in Chile, France, Germany, Great Britain, India, Italy, Japan, and the United States.

E. LIBERAL ARTS PROGRAMS FOR EXECUTIVES

312. DUDDEN, ARTHUR P. "The Organization Man—As Student." *Personnel Journal:* Vol. 38, No. 8, January 1960, pp. 286–291.

Rather complete description of the management development program initiated between the Bell Telephone System and the Institute of Humanistic Studies for Executives at the University of Pennsylvania. Includes the motives, objectives, and content of the program, plus an evaluation of results.

313. FIELDEN, JOHN. "Educating Tomorrows Executives." *Harvard Business Review:* Vol. 38, No. 6, November–December, 1960, p. 6.

Report of a survey of business executives who were queried about essential education and training for potential industrial managers. Explores the values and limitations of liberal arts education. Concludes that "the problem is not so much one of broad education for future businessmen, as it is one of a business education for men of breadth."

314. GOLDWIN, ROBERT A., and CHARLES A. NELSON. *Toward the Liberally Educated Executive.* White Plains, N. Y.: Fund for Adult Education, 1957. 111 pp.

A series of articles by educators and business executives exploring the need for up-dating executives in the liberal arts to meet the demands of modern management.

315. PECKHAM, M. *Humanistic Education for Business Executives.* Philadelphia: University of Pennsylvania Press, 1960.

A brief description of the liberal education program for incumbent managers conducted by the Bell Telephone Co. at the University of Pennsylvania and an evaluative commentary on the program by the University official who prepared the program. The assumptions and conceptual framework for what was included in the curriculum are described in detail.

F. CRITIQUES OF MANAGEMENT DEVELOPMENT

316. ANDREWS, KENNETH R. "Is Management Training Effective? I. Evaluation by Managers and Instructors," *Harvard Business Review:* Vol. 35, No. 1, January–February 1957, pp. 85–94.

This is the first of a series of two articles concerned with the effectiveness of training programs in the development of managers. Covers the evaluative reactions of managements that have sent candidates to university courses and the university instructors who have taught such courses.

317. ———. "Is Management Training Effective? II. Measurement, Objectives, and Policy." *Harvard Business Review:* Vol. 35, No. 2, March–April 1957, pp. 63–72.

This article, supplementing an earlier one under the same title draws conclusions from studies of management training by social scientists and evaluates these conclusions. It is concerned with the value to participants of both in-company programs and university-sponsored courses for executives.

318. BLANSFIELD, MICHAEL G. "The Untimely Passing of Management Development." *Personnel Journal:* Vol. 39, No. 10, March 1961, pp. 404–408.

Author points out several reasons why Management Development programs fail. States that Management Development is too often concerned mainly with the completion of forms and maintenance of records. He calls for a return to the planned acquisition of knowledge and opportunities for personal growth. He lays out three important concepts which should guide the Training Director in the installation of a management development program.

319. CAMPBELL, RALPH N., and ELIZABETH R. KNOWLTON. *Business Leadership in Air Transportation, Report on American Airlines—Cornell University Cooperation in a Management Development Program.* Ithaca: N. Y. State School of Industrial and Labor Relations, Cornell University, 1960. 77 pp.

A detailed report of a project in management development cooperatively undertaken by a University and a business organization.

The report covers the program itself, how it came into being, its objectives, and its results.

320. COE, ROBERT S. "Common Sense in Manager Development." *Advanced Management:* Vol. 24, No. 11, November 1959, pp. 24–26.

Some current methods of manager development are analyzed and several noteworthy suggestions are made as to careful re-examination of basic methods of training. Objectives and orientation of development programs are also considered.

321. ELLIOTT, JOHN M. "A Checklist for Auditing the Management Development Program." *Personnel:* Vol. 38, No. 4, July–August 1961, pp. 80–83.

The author poses fifteen questions to be used as a starting point for an audit of a management development program.

322. HUNT, NORMAN C. "Second Thoughts on Management Education." *The Manager:* Vol. 28, No. 5, May 1960, pp. 348–353.

An evaluation of the current status of management development. Points out that the post-war years were a seller's market in management education, and that wide variations in quality were offered. Author sees need for improved judgment in the selection and utilization of management courses by organizations.

323. JOHNSON, THOMAS H., JR. "Let's Get Management Development Back on the Track." *The Management Review:* Vol. XLIX, No. 6, June 1960, pp. 16–22.

The author calls for a re-evaluation of the management development function in the business organization. He points out the pitfalls that exist in the major areas of management development, and explains the steps to be taken to avoid these pitfalls. The article is a warning signal that should prove helpful in the examination and evaluation of existing management development programs.

324. LEAVITT, HAROLD J., and THOMAS L. WHISTLER. "Management in the 1980's." *Harvard Business Review:* Vol. 36, No. 6, November–December 1958, pp. 41–48.

A speculative assessment of the impact of technological forces on the managerial skill requirements in business organizations in the next two decades, and the resulting implications on management development requirements.

325. LEVINSON, HARRY. "A Psychological Look at Executive Development." *Harvard Business Review:* Vol. 40, No. 5, September–October, 1962, pp. 69–75.

Examines the reasons why some management development programs fail, and suggests how psychological principles might be put to use by those who become engaged in the development process.

The article addresses itself to some of the limitations of appraisal and coaching, various problems dealing with executive rewards, and to the role which staff men can play in the development process.

326. McMURRY, ROBERT N. "Executive Development: Dollars Down the Drain?" *Dun's Review:* Vol. 76, No. 2, August 1960. pp. 36–38.

The author makes a critical evaluation of management development programs, exposing many faults and fallacies inherent in, and surrounding the executive training programs of many companies. The article points out that many such programs are expected to achieve miracles, and concludes that for the most part, this does not occur. It goes on to enumerate what a good management development program can accomplish if conditions are right. A short but realistic look at current executive development.

327. MASTERSON, THOMAS R., and KENNETH HENNING. "Is Management Development Worth the Cost?" *Advanced Management:* Vol. 25, No. 11, November 1960, pp. 12–15.

The article states that there is a shortage of, and a need for, competent executive and supervisory personnel. A passage is included on how to evaluate and justify the costs of supervisory training programs. The basis for this justification is found in the demands various jobs make on an individual. The value of identification of the individual with the group is analyzed.

328. NELSON, THOMAS H. "Mistakes of the 50's—Opportunities in the 60's for Management Development." *Advanced Management:* Vol. 25, No. 5, May 1960, p. 5.

The article constitutes an evaluation of the problems that have arisen in management development in the past decade and of the potential that management development can realize in the next decade. The author groups these mistakes into five general categories and analyzes the cause for each. The article goes on to identify the conditions that will be faced in the future and the principles that must be adhered to if management development is to contribute to an organization.

329. POCKRASS, JACK. "Executive Development—Semantics or Substance." *Personnel Administration:* Vol. 22, No. 6, November–December 1959, pp. 36–43.

The author asks whether current management development methods can be substituted for simple work experience in the process of developing men to assume leadership and decision-making responsibility. Suggests a reappraisal to determine how much of what is being done is substantive.

330. SCHEIN, EDGAR H. "Forces which Undermine Managerial Development." *California Managerial Review:* Vol. 5, Summer 1963, pp. 23–24.

Perceptive article analyzes several of the factors in an organization which work to block the attitude and performance changes required for effective management development. Author lists and discusses three major "development blocks" and offers suggestions for ways to overcome them.

331. SPIELE, ARENDA J. H. "An Evaluation Study of the 'Effective Executive Leadership Program,' A Seminar on Human Relations in Administration." M.S. Thesis, New York State School of Industrial and Labor Relations, Cornell University, September, 1960. 163 pp.

This study analyzes and evaluates a seminar course on Human Relations in Administration conducted in a university. The author examines the results of interviews with the seminar participants, as well as mail questionnaires sent out to participants who were not interviewed in the evaluation study.

332. "Survey of Executive Development Across the Country." *Modern Industry:* Vol. 3, February 1953, p. 62.

A report of the views of industrial executives, management consultants, and educators on the status of programs designed to improve managerial skill in organizations. Survey questions can be used to assess and evaluate company programs.

333. TAYLOR, ERWIN K. "Management Development at the Crossroads." *Personnel:* Vol. 36, No. 2, March–April 1959, pp. 8–23.

A critical article discussing the relevant factors that lead to the success or failure of management development programs in organizations. Suggests the deep-seated elements which normally are not taken into account when programs are developed.

334. TOUSSAINT, M. N., and F. C. MUNSON. "How Not to Conduct a Managerial Training Program." *Personnel Administration:* Vol. 26, September–October 1963, pp. 12–20.

Relates the events surrounding an unsuccessful executive training program. Analysis of the information presented in this article provides a helpful insight into the prerequisite for successful training.

VII. TRAINING TECHNIQUES AND METHODS

A. CONFERENCE DISCUSSION LEADERSHIP

335. BUSCH, H. M. *Conference Methods in Industry.* New York: Harper, 1949. 107 pp.

What is a conference? What purposes can supervisory training conferences serve? What are the respective roles of the conference leader and conferee? What of the conference as a policy developing device in a company operation? These are typical of the items covered succinctly in this little book.

336. DEAN, RICHARD L. "The Conference Method: Panacea or Paradox?" *Journal of the American Society of Training Directors:* Vol. 13, No. 12, December 1959, pp. 8–15.

A critique of the conference method as a training technique, as an informational medium, and as a problem solving method. Concludes that for those who subscribe to the philosophy of participative management, sound training programs in conference leadership will lead to more rational business decisions.

337. DePHILLIPS, FRANK A. "How to Activate the Quiet Man in the Conference." *Journal of the American Society of Training Directors:* Vol. 14, No. 4, April 1960, pp. 34–40.

Provides a good analysis of the "quiet man" or non-participating member in conferences. Article contains a proposal designed to force nonparticipants to take a more active part in the conference, and provides a plan by which this proposal may be introduced and used.

338. FISHER, W. E. *Conference Leader's Guide.* Bulletin No. 15. Industrial Relations Section, California Institute of Technology, 1948. 28 pp.

This bulletin, in detailed outline form, provides a conference leader with a structure for developing a typical information-giving conference.

339. FRYER, DOUGLAS H., MORTIMER R. FEINBERG, and SHELDON S. ZALKIND. *Developing People in Industry,* chap. 7, pp. 124–127. New York: Harper, 1956.

The authors set forth a rationale for the use of group participative learning techniques for providing instruction in human relations skills and attitudes at the supervisory and management levels.

340. GORDON, THOMAS. "Improving Your Leadership in Discussion Groups." *Adult Leadership:* Vol. 1, No. 11, March 1953, pp. 13–20.

An instructive discussion of attitudes and techniques essential to creating sensitivity in a group learning situation. Emphasizes the role of the leader in achieving the learning ends of the group.

341. GULLEY, HOLBERT E. *Discussion, Conference and Group Process.* New York: Holt, Rinehart and Winston, 1960. 388 pp.

This book is grounded in concepts derived from research in individual participation in group processes and group processes themselves. An example of application and method, presented at a sophisticated level.

342. "Improving Large Meetings: Tool Kit." *Adult Leadership:* Vol. 1, No. 7, December 1952, pp. 14–20.

To be educationally effective, large group meetings require planning and organization. This item covers minutely the essential details which require attention in planning and organizing meetings for training purposes.

343. INGENOHL, INGO. "Conference Leadership." *Journal of the American Society of Training Directors:* Vol. 15, No. 1, January 1961, pp. 46–55.

Emphasis on more recently developed techniques has obscured the need to review the conference leadership device. The author here summarizes and brings up to date information about various types of conferences and their uses in the organizational setting.

344. "Leading Discussion." *Adult Leadership:* Vol. 1, No. 10, March 1953. 33 pp.

Current emphasis on discussion leadership in the informal discussion environment makes it essential to appreciate the concepts involved. Several authors, including Nathaniel Cantor, have contributed to this issue of *Adult Leadership* and state the case for learning at the adult level in terms of group dynamics. Although no bridge is provided here to take the trainer into the industrial field where he may need to operate, the articles do illuminate the principles which proponents of the values of informal discussion hold important.

345. LEVINE, JACOB and JOHN BUTLER. "Lecture vs. Group Decision in Changing Behavior." Group Dynamics, Research and Theory. Chicago: Row, Peterson, and Company, 1960. 825 pp.

Describes experimental evidence that learning by supervisors results more effectively from group participative instructional method than from the use of the lecture.

346. MAIER, NORMAN R. F. *Problem-Solving Discussions and Conferences.* New York: McGraw-Hill, 1963. 261 pp.

Covers recent research and experimentation by the author dealing with improving the effectiveness of the leader's group problem solving and decision making performance. Discusses how principles of group behavior may be used by the conference leader.

347. MAIER, NORMAN R. F., and RICHARD H. MAIER. "An Experimental Test of the Effects of 'Developmental' Versus 'Free' Discussion on the Quality of Group Decision." *Journal of Applied Psychology:* Vol. 41, No. 5, October 1957, pp. 320–323.

Reports a study of two varying techniques under the general heading of unguided conference discussion.

348. QUINN, JOHN. "Emotional Aspects of Training Discussion Leaders." *Personnel:* Vol. 36, No. 2, March–April 1959, pp. 68–77.

Most participants in a discussion leadership training course come to the session hampered by feelings of self-consciousness and dependency. This article describes a training program designed to minimize these feelings in the process of learning conference leadership techniques.

B. SENSITIVITY TRAINING

349. ARGYRIS, CHRIS. "A Brief Description of Laboratory Education," "In Defense of Laboratory Education," and "A Comment on George Odiorne's Paper." *Journal of the American Society of Training Directors:* Vol. 17, No. 10, October 1963.

These items report the positive portion of a debate on sensitivity training and the laboratory training device. The author makes claims for the validity of the method and cites research findings and his own experience to support his position.
The article should be read in context with the Odiorne reference 361.

350. BARNLUND, DEAN C., and FRANKLYN S. HAIMAN. *The Dynamics of Discussion.* Boston: Houghton Mifflin, 1960. 461 pp.

The authors identify discussion as socially purposeful communication between two or more people. Unlike typical books on discussion, this book draws at considerable depth on the original source ideas from John Dewey and Kert Lewin and the elaborators of their point of view. A prerequisite for appreciating the characteristics of sensitivity training.

351. BASS, BERNARD M. "The Management Training Laboratory." *Advanced Management:* Vol. 25, No. 7, July 1960. pp. 11–16.

The author discusses the importance of the function of interaction in groups, and lists the factors that influence interaction. The body of the article is concerned with the specific problems which are found in the group interaction that occurs in formal organizations, and how a soundly-established, well-run management training laboratory can solve these problems. An analysis of this new training method is included, as well as a commentary on the potential of this method.

352. ———. "Mood Changes During Training Laboratory." *Journal of Applied Psychology:* Vol. 46, No. 5, 1962, pp. 361–364.

Author summarizes the emotional changes which occurred to a management group engaged in sensitivity training. A check list designed to measure any shift in feelings was administered five different times during the ten-day laboratory experience.

353. BIDWELL, ALVIN C., JOHN J. FARRELL, and ROBERT R. BLAKE. "Team Job Training—A New Strategy for Industry." *Journal of the American Society of Training Directors:* Vol. 15, No. 10, October 1961, pp. 3–23.

An exhaustive description of a training method in which the operating personnel team with the training functions to provide more job-related training. Utilizes essential components of sensitivity device to assure constructive involvement of the learner in the process of training.

354. BLAKE, ROBERT R., and JANE SYRGLEY MOUTON. "The Developing Revolution in Management Practices." *Journal of the American Society of Training Directors:* Vol. 16, No. 7, July 1962, pp. 29–52.

Following an analysis of developments in management theory, the authors provide a reconciliation between production-oriented and human relations oriented styles of supervision. The concept of the "managerial grid" is the basis for analysis, and laboratory training is the suggested device for developing managerial skill to achieve production while recognizing human values in the interaction process at the work-place.

See also by the same authors:

"Job Team Training: A New Strategy for Industry, *Journal of the American Society of Training Directors,* October 1961.

"How Executive Team Training Can Help You," *Journal of the American Society of Training Directors,* January 1962.

"Headquarters—Field Team Training For Organizational Improvement," *Journal of the American Society of Training Directors,* March 1962.

355. BLANSFIELD, MICHAEL G. "Depth Analysis of Organizational Life: Sensitivity or Laboratory Training as a Tool for Encouraging Individual Development." *California Management Review:* Vol. 5, Winter 1962, pp. 29–42.

In this case history a firm employed sensitivity training principally to achieve organizational development, with significantly positive results.

356. ———. "Inside the Laboratory Trainer." *Journal of the American Society of Training Directors:* Vol. 14, No. 6, June 1960, pp. 20–25.

Describes the appropriate role of the leader in the accomplishment of sensitivity training group purpose.

357. BRADFORD, LELAND P. *Group Development.* Washington: National Training Laboratories, National Education Association, 1961. 106 pp.

Selected readings by authors who are deeply committed to the concept that there is validity to sensitivity training and laboratory training as a means for achieving effective group decisions in the discussion process. This series follows four other previously published by NTL:

Group Development—L. P. Bradford, Editor

Leadership in Action—G. L. Lippit, Editor

Human Forces in Teaching and Learning—L. P. Bradford, Editor

Forces In Community Development—Dorothy and H. Hurtis Mial, Editors.

Taken together, these volumes reflect the purposes and basic philosophy of NTL.

358. CANTOR, N. F. *Dynamics of Learning.* Buffalo, N. Y.: Foster and Stewart, 1946. 282 pp.

The author approaches the development of leadership in a work-oriented environment from a psycho-sociological point of view. He stresses the functions of status and power in the organizational hierarchy and suggests that changes can be achieved mainly through modification of the behavior of managers. Examples of situations describe the methods for achieving behavioral change in the manager training process.

359. MILL, CYRIL R. "A Theory for the Group Dynamics Laboratory Milieu." *Adult Leadership:* Vol. 11, No. 5, November 1962, p. 133.

A critical analysis of the psychological processes involved in Sensitivity Training.

360. National Training Laboratory in Group Development. *Report of the Second Summer Laboratory Session,* Bethel, Maine, June 13–July 3, 1948. Bulletin No. 3. National Education Association and Research Center for Group Dynamics, 1948. 136 pp. ("Clinic on Role-Playing with Adults," pp. 39–43.)

The impact of "sensitivity" training with its attendant processes of "involvement" in learning has left a mark on training methods at the adult level. These sections of the NTL Bethel report of 1948 are essential reading for anyone who plans to embark on this clinical and diagnostic approach to industrial training. Major value lies in the fact that these are reports direct from Bethel and not warmed-over interpretations of the educational method practiced there.

361. ODIORNE, GEORGE S. "The Trouble with Sensitivity Training." *Journal of the American Society of Training Directors:* Vol. 17, No. 10, October 1963, pp. 9–21.

A penetrating and critical analysis of the assumptions and methods of laboratory training. The author presents criteria for evaluating the processes of sensitivity training and concludes that the evidence based on these criteria does not add up to the claims of validity for the method as a training tool for managerial development. The article should be read in context with the Argyris paper, reference 349.

362. WESCHLER, I. R., M. A. KLEMES, and C. SHEPHERD. "A New Focus in Executive Training." *Advanced Management:* Vol. 20, May 1955, pp. 19–22.

The authors have had experience in the use of sensitivity training with executives and report what they believe are the values of this training method. They conclude that "reports from both trainees and co-workers indicate that this method of training does lead to greater human relations know-how." This article is valuable for those who are interested in exploring the clinical approach to training and developing managerial skills.

C. SIMULATION AND BUSINESS GAMES

363. COHEN, K. J., *et al.* "The Carnegie Tech Management Game." *The Journal of Business:* Vol. 33, No. 4, October 1960, pp. 303–321.

Management games have been designed to serve broad and limited purposes in manager training. This particular game, developed by faculty members at the Graduate School of Industrial Administration at Carnegie Tech, is claimed to provide both complexity and realism in the situation embracing the game. The authors describe the educational and research possibilities they tried to build into the device.

364. COHEN, K. J., and E. RHENMAN. "The Role of Management Games in Education and Research." *Management Science:* January 1961, pp. 131–166.

An excellent summary of the "state of the business game art." Outlines past, present and future use of business games in both industrial training and social science research purposes. Includes a detailed description of several games and suggests improvements.

365. GREENE, JAY R., and ROGER L. SISSON. *Dynamic Management Decision Games.* New York: John Wiley & Sons, 1959. 84 pp.

Seven management decision games which do not require use of electronic competence are included in this volume. Chapters on how to construct, how to direct, and how to modify business games precede the games themselves. Player instructions, referee instructions and background data are included with each game.

366. GREENLAW, PAUL S., *et al. Business Simulation: In Industrial and University Education.* Englewood Cliffs, N. J.: Prentice Hall, Inc., 1962. 356 pp.

Describes the purposes and historical origins of simulation as a business training device. Illustrates games which may be utilized for training at the college and company levels.

367. HERDER, JOHN H. "Do-It-Yourself Business Games." *Journal of the American Society of Training Directors:* Vol. 14, No. 9, September 1960, pp. 3–8.

After introductory comments concerning business games in general, the article provides a detailed description of the basic steps to be taken in establishing and utilizing non-computer business games in one's own particular situation. Emphasis is placed on stimulating the participants by simulating the conditions encountered at "the heart of decision-making."

368. KILIBEE, JOEL M., CLIFFORD J. CRAFT, and BURT MANUS. *Management Games, a New Technique for Executive Development.* New York: Reinhold Publishing Corporation, 1961. 347 pp.

This book enthusiastically supports the games technique as a management development device. Suggests that it can be used for operations research, problem solving, executive testing, as well as for executive education. Half of the book is devoted to six detailed descriptions of industry games.

369. McKENNEY, J. L. "Evaluation of a Business Game in an MBA Curriculum." *Journal of Business:* Vol. 35, July 1962, pp. 278–286.

Author describes the utilization and evaluation of a business game as an adjunct to courses in the MBA curriculum at Harvard Uni-

versity. The evaluation information presented by the author indicates that business gaming did bring out interrelationships of functional decisions within a firm and aid in developing the art of planning.

370. McMURRAY, FRED R. "Combining Simulation, Administration Science and Group Dynamics." *Journal of the American Society for Training Directors:* Vol. 15, No. 5, May 1961, pp. 5-13.

Detailed description of a manager training experiment integrating computer simulation, an administrative science course, and a group dynamics laboratory. Evidence demonstrated that the combination of devices produced an effective learning situation.

371. PLATTNER, JOHN W., and LOWELL W. HERRON. *Simulation: Its Use in Employee Selection and Training.* Management Bulletin No. 20, American Management Association, New York. 21 pp.

A detailed description of the origin and conceptual structure of a managerial selection and training device for college student hired during the summer preceding graduation. The exercise simulates as much as circumstances permit of the manufacturing plant managers job in the company. Results in trial runs are reported to be the basis for optimism about the technique.

372. PORTER, GEORGE W. "Learning Through the Use of Small Games and Puzzles." *Journal of the American Society for Training Directors:* Vol. 15, No. 3, March 1961, pp. 13–21.

Examples of games utilized in the learning process are provided in this article. Emphasizes that since the main learning comes from feedback and discussion of data produced and from intense participant involvement, careful attention must be given to making learning rather than gaming, the prime consideration.

373. STANLEY, JOHN D. "Management Games: Education or Entertainment?" *Personnel Journal:* Vol. 41, No. 1, January 1962, 15 pp.

Evaluates the simulation device as a means for personnel testing and training. Concludes that gaming is another useful method for organizational training in the company training program.

374. STEINMETZ, LAWRENCE L. "Management Games: Computer Versus Non-Computer." *Journal of the American Society of Training Directors:* Vol. 16, No. 9, September 1962, pp. 38–45.

Comparison of learner responses to two types of business games training applications. The study demonstrates elements to take into account when choosing the method to be utilized.

375. THORELLI, H. B., *et. al.* "International Operations Simulation at the University of Chicago." *Journal of Business:* Vol. 35, July 1962, pp. 287–297.

Describes the INTOP business game developed for the training of managers in international business problems. The authors feel that the game, which is programmed on a Univac I-III, has substantial benefit both as a general training device and a research instrument.

376. VANCE, STANLEY. *Management Decision Simulation.* New York: McGraw-Hill, 1960. 50 pp. and worksheets.

A detailed description of a non-computer game for management decision simulation. No attempt is made to justify the training method, but full attention is given to the details of organizing, planning, and executing the procedure to be followed in this particular game. Worksheets and other materials and information are provided for the game in this one source.

377. WIKSTROM, WALTER S. "The Serious Business of Business Games." *Management Record:* Vol. 22, No. 2, February 1960, pp. 6–8, 24–25.

The business game technique of training is rather completely described, and the benefits and limitations of the technique are discussed.

D. ROLE PLAYING

378. ALVIN, ROBERT. "Acting Course for Salesmen?" *Sales Management:* Vol. 84, No. 2, January 15, 1960, pp. 90–92, 94–95.

In evaluating their salesmen, one insurance company discovered that much of their salesmen's delivery sounded canned and mechanical. A drama coach was called in, to set up an acting course for the salesmen to facilitate easier identification with their roles. The article explains how the course was set up and taught, and the results that were forthcoming. A brief, but provocative article.

379. BOTT, ROBERT. "Role Playing in the Raw (Part 2)." *Journal of the American Society of Training Directors:* Vol. 14, No. 1, January 1960, pp. 31–32.

The author describes a training method used at Dow Corning Corp., where participants are put into role-playing situations without their knowledge. After experiencing the controlled situation for a period of time, participants are informed of its contrived nature. An analysis and discussion of the role-played topic under consideration then follows, based on the participants' own behavior and reactions in the controlled situation.

380. CORSINI, Raymond J. "Role-Playing: Its Use in Industry." *Advanced Management:* Vol. 25, No. 2, February 1960, pp. 20–23.

In this article the author presents the general purposes of, and some of the leading techniques employed in, role-playing in indus-

try. Concludes by citing some of the current applications of this method, and his reasons for believing that role-playing will be more widely used in the future.

381. FRENCH, J. R. P., Jr. "Role-Playing as a Method of Training Foremen." *Human Factors in Management,* Schuyler Dean Hoslett, ed. New York: Harper, 1946, pp. 99–116.

Compared with other methods of training foremen to handle interpersonal relations, e.g., reading, lectures, and conferences, the role-playing method has a number of distinctive characteristics. These characteristics are illustrated, identified, and defined in this paper.

382. LIPPITT, R. "The Psychodrama in Leadership Training." *Sociometry:* Vol. 6, August 1943, pp. 286–292.

The psychodrama or role-playing training technique is recommended as an adequate substitute for real experience at the supervisory training level. Illustrations are drawn from social work experiences.

383. MAIER, NORMAN R. F., ALLEN R. SOLEM, and AYESHA A. MAIER. *Supervisory and Executive Development.* New York: John Wiley, 1957. 330 pp.

Case examples of multiple and single role-playing situations and a situation involving the skit-completion technique. Detailed instructions are provided for the conference leader to use the technique in supervisory or executive training.

384. MAIER, NORMAN R. F., L. RICHARD HOFFMAN, and LEONARD M. LANSKY. "Human Relations Training as Manifested in an Interview Situation." *Personnel Psychology:* Vol. 13, No. 1, Spring 1960, pp. 11–30.

A detailed report of a study designed to determine whether the behavior of trainees in a role-playing situation could be improved through experience in a human relations training course. The role-playing experience is described as well as the research design. Results are not conclusive but suggest that time spent on involvement in role-playing contributes to more effective behavioral change.

385. "Sixty-four Hints to Help You Make Role-Playing Work." *Factory Management and Maintenance*: Vol. 112, January 1954, p. 282.

A list of suggestions about the administration of role-playing in in-service training derived from actual experience.

386. SOLEM, ALLEN R. "Human Relations Training: Comparison of Case Study and Role Playing." *Personnel Administration:* Vol. 23, No. 5, September-October 1960, pp. 29–37.

An empirical study of the advantages of case method and role-playing used alone and in combination in the training process. Author concludes that the two methods furnish different training experiences for participant with case study emphasizing factual considerations and role-playing emphasizing emotional and skill factors. Thus used in combination, role-playing can create a situation and case study can be employed to discuss and analyze facts involved in the particular learning situation.

E. CASE STUDY TECHNIQUES AND INCIDENT PROCESS

387. ANDREWS, KENNETH R. "Executive Training by the Case Method." *Harvard Business Review:* Vol. 29, September 1951, pp. 58–70.

Describes and evaluates two company experiments in the use of cases for supervisory and management training. Emphasizes the individual characteristics of the two programs, concluding that the case method must be adapted to the unique circumstances of particular organizations. Procedural techniques are identified and described.

388. BROWN, MARGARET M. "Course for Case-Study Leaders." *The Manager:* Vol. 28, No. 1, January 1960, pp. 61–62.

Brief summary of the format and some of the results of a case-study course carried out by the British Institute of Management. Some suggestions for improving the course are also included.

389. MARSHALL, DONALD M. "The Incident Process of Supervisory Training." *Personnel:* Vol. 31, September 1954, pp. 134–140.

Description of objectives and techniques employed in a company experience with the incident process in supervisory training. Outlines program pattern in detail and presents sample incidents.

390. PHILLIPS, SIDNEY H. and THORNE S. FOSTER. "Self-Development Training for Foreman: A Program for Participation and Motivation." *Personnel Journal:* Vol. 41, No. 9, October 1962, pp. 445–448.

Describes a case-method approach to supervisor training and suggests that the device capitalizes on individual motivation to improve supervisory skill.

391. PIGORS, PAUL and FAITH PIGORS. *Caste Method in Human Relations.* New York: McGraw-Hill, 1961. 413 pp.

An incisive description of the case method and particularly the Incident Process as its use has developed in the hands of the authors. This book is of particular value to those concerned with supervisory and middle management training.

392. ———. *The Incident Process: Learning by Doing.* M.I.T. Department of Economics and Social Science, Publications in Social Science, Series 2, No. 46. 8 pp.

A detailed description of the procedures developed by the authors for pursuing this particular application of the case method. This material is an excellent introduction to the application of the Incident Process to training in organizations.

393. STONE, SAMUEL I. "The Incident Process." *Journal of the American Society of Training Directors:* Vol. 13, No. 3, March 1959, pp. 17–26.

Describes the incident process and notes the role of the observer-reporter from an actual management training experience. Provides full details about the conduct of the training session.

394. U.S. Civil Service Commission. *Index to Supervisory Case Studies.* Personnel Methods Series No. 8. Washington: G.P.O., 1958. 23 pp.

An index to case studies used in training. Lists individual case studies with title, short description, and source by subject areas; motion pictures and publications containing case histories and short descriptions of these in most cases are also indexed.

F. PROGRAMMED LEARNING

395. ABMA, JOHN S. "The Development and Evaluation of a Programmed Training Course for Sales Personnel." *Journal of the American Society of Training Directors:* Vol. 16, No. 10, October 1962, pp. 20–29.

Reports a study in a department store to evaluate effectiveness of lecture-demonstration training method versus programmed instruction. In the latter a comparison was made of the value of teaching machines and a simple device, a program envelope. Each is carefully described.

396. BOEHM, GEORGE A. W. "Can People Be Taught like Pigeons?" *Fortune:* Vol. LXII, No. 4, October 1960, pp. 176–180.

An interesting, provocative article on programmed teaching. The article explains the concept of programmed teaching and analyzes the two most prevalent schools of thought on the subject: the "conditioning" approach of B. Frederic Skinner, and the "non-conditioning" approach of Norman A. Crowder. Examples of programmed teaching are included, and the use of teaching machines is illustrated.

397. CHRISTIAN, ROGER W. "Guides to Programmed Learning." *Harvard Business Review:* Vol. 40, No. 6, November–December 1962, pp. 36–66.

Provides a useful starting point for the company considering programmed instruction. Highlights the information available in the area and includes a brief basic bibliography.

398. DOLMATCH, THEODORE B., *et al. Revolution in Training: Programmed Instruction in Industry,* American Management Association Report Series, No. 72. New York, 1962. 160 pp.

After a brief primer on programmed learning and a report on industrial application of the process, a series of experiences of various companies is recited, covering both machine and nonmachine applications.

399. GEER, LEROY N. "A Study of Comparative Methods of Teaching Basic Electricity." *Journal of the American Society of Training Directors:* Vol. 16, No. 12, December 1962, pp. 17–24.

An experimental study to determine the comparative learning advantage from using programmed instruction in various forms in a situation where knowledge of electricity is essential for work performance.

400. HUGHES, J. L. "Industrial Applications of Teaching Machines." *Journal of the American Society of Training Directors:* Vol. 15, No. 7, July 1961, pp. 30–40.

A practitioner who is also a theorist comments on essential considerations which need to be taken into account with respect to programming techniques, costs of preparation of programs, and the kinds of hardware associated with the teaching machine process.

401. HUGHES, J. L., and W. J. McNAMARA. "A Comparative Study of Programmed and Conventional Instruction in Industry." *Journal of Applied Psychology:* August 1961, pp. 225–231.

Reports the results of an experiment designed to test the effectiveness of programmed learning in industrial training situations. The experimental group consisted of computer service trainees. Significant gains in achievement and reduction in training time were recorded for the trainees receiving programmed learning.

402. ———. "The Potential of Programmed Instruction." *Personnel:* Vol. 38, No. 6, November–December 1961, pp. 59–67.

The authors point to experiences in industry which demonstrate the basic value of programmed learning for employee training at various levels. Consideration is given to how programmed instruction helps to resolve the problems growing out of (1) shortage of qualified instructors (2) difficulties encountered in assembling training groups because of shift work, and (3) need to provide for training of employees in widely scattered locations. In addition, the article deals with methods for preparing programs.

403. LEVINE, L. STANLEY, and LEONARD C. SILVERN. "The Evolution and Revolution of the Teaching Machine." *Journal of the American Society of Training Directors:* Part I, Vol. 14, No. 12, December 1960, pp. 4–16.

Describes and elaborates on the conceptual scheme on which programmed learning and teaching machines are based. Attention is paid to the origins from which the concept is derived and the historical developments which have made contributions. Various machines are described in detail. An important section is devoted to lesson planning, with special emphasis on learning laws as they apply to developing training courses.

404. ———. "The Evolution and Revolution of the Teaching Machine—Part 2."*Journal of the American Society of Training Directors:* Vol. 15, No. 1, January 1961, pp. 14–27.

Traces the theoretical origins of the teaching machine and programmed learning and notes that content, method and the mechanism are essential elements in effective teaching machine instruction.

405. LIPPITT, GORDON L., and WAYNE N. SCHELLE. "Training Directors' Attitudes Toward Programmed Instruction."*Journal of the American Society of Training Directors:* Vol. 16, No. 11, November 1962, pp. 9-17.

Reports a survey of training specialists in organizations to determine current use of and attitudes toward programmed instruction. The survey shows a low level of use but a high level of expectation with respect to the potential of automated teaching.

406. LUMSDAINE, A. A., and ROBERT GLASER. *Teaching Machines and Programmed Learning.* Washington, D. C.: National Education Association, 1960. 723 pp.

A compilation of authoritative contributions for an understanding of theoretical concepts and applications of programmed learning and the teaching machine. The compilers have brought under one cover an exhaustive array of historical and current information on the subject. In two appendices extensive references are provided to cover almost every conceivable application of teaching machine technology.

407. LYSAUGHT, JEROME P. "Programmed Learning and Teaching Machines in Industrial Training." *Journal of the American Society of Training Directors:* Vol. 15, No. 2, February 1961, pp. 8–13.

A description of how one company has experimented with and utilized programmed instruction for improving employee training at the work-skill and supervisory levels.

408. ———. "Programmed Learning and Teaching Machines in Industrial Training—Part 2." *Journal of the American Society of Training Directors:* Vol. 15, No. 6, June 1961, pp. 13–20.

A description of the considerations taken into account by Kodak in the process of setting up methods, techniques and devices in that organization. Covers experiments with devices including programmed books and various machines.

409. ROE, ARNOLD. "Research on Teaching Machines and Programmed Learning." *Journal of Engineering Education:* Vol. 52, No. 7, March 1962, pp. 439–447.

This well-documented article presents research information which bears on seven critical areas in the development of a program and application of that program to a learning situation. Author draws heavily from engineering and educational concepts.

410. ROSEN, NED A., and EMIL A. MESICS. "Programmed Instruction: What It Is and Where It Is Going." *The Business Quarterly,* University of Western Ontario, School of Business Administration, Vol. 28, No. 2, Summer 1963, pp. 39–48.

A non-technical discussion of the theoretical origins of programmed learning, an assessment of its application to learning situations in the work environment and a description of the several devices utilized by the method. Attention is also given to the possibilities and limitations of this instructional method.

G. *MISCELLANEOUS*

411. AGUILAR, F. J. "Case of the Earmarked Executives." *Harvard Business Review:* Vol. 41, November–December 1963, pp. 6–8.

Author perceptively discusses the concepts and operations involved in utilizing "junior boards" as a training device. Using a case study as a starting point, four experts (one from academic life and three from industry) present their views. An excellent review of the problems and potentials in junior boards.

412. BELLOWS, ROGER. "The Management of Learning: I. Theory and Practice" *Personnel Administration:* Vol. 23, No. 1, January–February 1960, pp. 21–28.

An overview of learning theory—brief mention of some of the earlier beliefs, somewhat more detailed examination of contemporary theories and principles. Touches upon the trial and error theory of Thorndike, the conditioning theories of Pavlov and Guthrie, the reinforcement theory of Hull, and the *Gestalt* (perception of relationship within the total situation) theories of Tolman and others. Concludes with discussion of group dynamics as it affects motivation and learning.

413. DOWLING, W. ERNEST. "Interview Training for Pre-Retirement Planning." *Journal of the American Society of Training Directors:* Vol. 15, No. 11, November 1961, pp. 38–51.

Describes a company program designed to train supervisors and managers to handle the critical aspects of planning for employee retirement. Recognizes the psychological factors which influence employee attitudes toward retirement and outlines a method for doing something about them.

414. FINN, MELVIN. "Correspondence Training for Many Civilian Employees." *Journal of the American Society of Training Directors:* Vol. 14, No. 3, March 1960, pp. 12–15.

Author's opinions concerning the desirability of correspondence training for civilian employees of the Navy. Article is based on a study made on a group of Naval employees, and discusses the essentials of establishing and maintaining this program.

415. GIBSON, GEORGE W. "A New Dimension for 'In Basket' Training." *Personnel:* Vol. 38, No. 4, July–August 1961, pp. 76–79.

Describes a motion picture technique developed by the Harvard Business School which adds the hitherto missing elements of work pressure and interruption to the in-basket training device.

416. JUDICE, P. F. "Screen Test for Salesmen." *Sales Management:* Vol. 91, July 5, 1963, pp. 57–58.

Describes the unique use of a short film which forms the basis of a self help training program at Reynolds Metals.

417. MAIER, NORMAN R. F. *Principles of Human Relations.* New York: John Wiley, 1955. 474 pp.

This book deals with learning processes involving individual participation in group decision at the adult level in the typical work environment. It is assumed that improved human relations results and better morale will come from the use of a democratic style of leadership. The author sets forth a method for achieving a modicum of free discussion by role-playing. The important role of the conference leader in reaching group decision is emphasized. Provides a wide variety of illustrative cases with roles identified for discussion application.

418. NICHOLS, RALPH G., and LEONARD A. STEVENS. "Listening to People." *Harvard Business Review:* Vol. 35, No. 5, September–October 1957, pp. 85–92.

Discusses the results of several studies concerned with the skill involved in listening and its effect on learning. Arrives at conclusions and recommendations for integrating the skill into management training.

419. SIEGEL, ARTHUR I., MILTON RICHLIN, and PHILIP FEDERMAN. "A Comparative Study of 'Transfer Through Generalization' and 'Transfer Through Identical Elements' in Technical Training." *Journal of Applied Psychology:* Vol. 44, No. 1, February 1960, pp. 27–30.

The relative effectiveness of generalized theoretical training and specific applied training is studied with respect to three different technical jobs. Criteria and results are presented and discussed, and statistical data furnished.

420. STATON, THOMAS F. *How to Instruct Successfully*. New York: McGraw-Hill, 1960. 291 pp.

Comprehensive chapters dealing with the lecture, demonstration—performance, group discussion, and role-playing of particular value to the new instructor who is drawn into the training function from his job specialty.

421. "Students Become Plant Managers." *Journal of College Placement:* Vol. 22, February 1962, pp. 24–27.

Article describes how Procter and Gamble provides college students with a realistic look at manufacturing management. Students, employed for the summer, become Plant Managers in the week long MATRIX business simulation game. This provides a "close to reality look" for students, aids them in career planning, and the company in selection. (Refer also to no. 321.)

422. WICKSTROM, LEROY A., and DONALD H. KING. "Teaching PERT Project Network Techniques." *Journal of the American Society of Training Directors:* Vol. 15, No. 12, December 1961, pp. 28–49.

A profusely illustrated article describing a pattern for teaching statistical analysis techniques as a managerial tool. Includes a glossary of PERT terms and an applicable mathematical formulation.

VIII. AUDIO VISUAL AIDS

423. BEATTS, PATRICK M. *Visualizing the Abstract.* Holyoke, Mass.: Technifax, 1956.

A small booklet devoted to current knowledge in the field of visual aids with particular reference to the advantages of reproduction in color.

424. CORRIGAN, ROBERT E. "Automated Instructional Methods." *Journal of the American Society of Training Directors:* Vol. 14, No. 4, April 1960, pp. 11–18.

Discussion of the problems and requirements to be encountered in training in the present and the future, and the ways in which automated instructional methods will help to satisfy these requirements. Comprehensive coverage of the methods, principles, and devices used in this mode of instruction.

425. CROWDER, NORMAN. "The Tutor." *Journal of the American Society of Training Directors:* Vol. 14, No. 5, May 1960, pp. 12–17.

Article provides a description of the "Tutor," a recently developed teaching machine. Author claims that the machine "is capable of teaching any subject which can be treated on the printed page or in motion pictures."

426. DALE, E. *Audio Visual Methods in Teaching.* New York: Dryden Press, 1946. 546 pp.

Although this book is primarily designed for use by elementary and secondary school teachers, it contains enough about basic audio-visual techniques to be useful to the industrial training specialist. Divided into three parts, it covers (1) theory of audio-visual materials, (2) examples of audio-visual materials, and (3) audio-visual methods. Source book for a variety of training applications at all levels.

427. EXTON, W., Jr. *Audio-Visual Aids to Instruction.* New York: McGraw-Hill, 1947. 344 pp.

Training at the skill and attitude level is accelerated through the utilization of visual and audio aids. These devices must be tailored to fit the special requirements of the training for which they will be used. Here is a book from which development and application methods and techniques can be derived by anyone faced with the problem of making and using films, slides, graphic materials, recordings, models, etc.

428. "Film Textbook Builds Talent Pool at Armco." *Business Week:* No. 1584, Jan. 9, 1960, pp. 56–60.

Describes innovation of Armco Steel Corporation to put entire

"principles of management" training program on film. Conferences used to supplement the film series, instead of films supplementing discussion.

429. GIBSON, GEORGE W. "The Filmed Case in Management Training." *Harvard Business Review:* Vol. 35, No. 3, May–June 1957, pp. 123–130.

Describes and evaluates five management training film projects. Cites the limitations and advantages of filmed cases at the management level and concludes that as a basis for group discussion the technique holds promise. Stresses that selection of films and adapting them for such use is all-important.

430. HAAS, K. B., and H. Q. PACKER. *The Preparation and Use of Visual Aids.* New York: Prentice Hall, 1950. 236 pp.

The effective use of audio-visual aids in learning requires that the instructor be skilled in the use of a variety of appropriate devices and media. The book covers a wide variety of knowledge and skill essential to anyone who needs to choose audio-visual materials to supplement instruction.

431. LIPSTREU, OTIS. "The Slapboard Is for Adults, Too!" *Journal of the American Society of Training Directors:* Vol. 12, No. 3, March 1958, pp. 21–23.

Article reports tried and effective techniques for utilizing the slapboard in supervisory and management training applications.

432. MOSER, GEORGE V. "Use of the Blackboard in Leading a Conference." *Management Record:* Vol. 22, No. 1, January 1960, pp. 17–19.

The advantages of using a blackboard in discussion-type training are cited, followed by a list of suggestions for making the most effective use of this generally available device.

433. *100 Selected Films in Economic Education.* Joint Council on Economic Education, New York, 1960. 34 pp.

A carefully selected list of films covering a variety of subjects appropriate for training in industry and other organizations. Annotation provides synopses for the films, level at which they can be used, and the source.

434. TAYLOR, IRVING A. "Psychological Roots of Visual Communication." *Journal of the American Society of Training Directors:* Vol. 13, No. 6, June 1959, pp. 34–43.

A report of research into the properties of visual symbols, which raises the question as to whether the traditional view that visuals are aids to verbal communication should be reversed. Suggests that when we reflect on the amount of non-verbal information obtained visually, it would seem that verbal communication is actually more than an aid to visual communications.

IX. TRAINING EVALUATION

435. AMUNDSEN, WALTER E. "Appraisal Plan Feedback." *Journal of the American Society of Training Directors:* Vol. 14, No. 3, March 1960, pp. 7–11.

Illustrates the value of comprehensive analysis of employee appraisal reports, pointing out the usefulness of these reports to management in indicating the personnel needs of the organization. An example of an organization's efforts in this direction is given.

436. BARTHOL, RICHARD P., and MARTIN ZEIGLER. "Evaluation of a Supervisory Training Program with 'How Supervise?'" *The Journal of Applied Psychology:* Vol. 40, No. 6, December 1956, pp. 403–405.

Report of a study testing the validity of the two forms of File-Remmers test as the basis for evaluating the success of a supervisory training program. Reveals some insight into use of this instrument in supervisory groups including members who finished elementary school or secondary school, and college graduates.

437. BESCO, ROBERT, JOSEPH TIFFIN, and DONALD C. KING. "Evaluation Techniques for Management Development Programs." *Journal of the American Society of Training Directors:* Vol. 13, No. 10, October 1959, pp. 13–27.

An exhaustive investigation of evaluation techniques of management development programs within the framework of organizational goals, need for training, program content, training methods, and training effectiveness. An extensive bibliography is provided.

438. BAXTER, BRINT. "A Training Evaluation Study." *Personnel Psychology:* Vol. 6, Winter 1953, pp. 403–417.

This report describes a study designed to measure the effects of a company's conference training program. The results of the study disclosed no significant difference between those given conference training and those trained on the job. The criteria considered and possible explanation of these results are discussed. An example of systematic training evaluation research.

439. BELMAN, HARRY S., and H. H. REMMERS. "Evaluating the Results of Training." *Journal of the American Society of Training Directors:* Vol. 12, No. 5, May 1958, pp. 28–33.

Outlines a suggested plan and basic principles for measuring and interpreting training performance in organizations.

440. BLUM, MILTON L. *Readings in Experimental Industrial Psychology,* chap. 3, "Training." New York: Prentice-Hall, 1952.

The readings assembled in this chapter are primarily concerned with the measurement of training results. Provides examples of the kinds of criteria on which measurements are made and the techniques for analysis. The samples are relevant to the broad field of training.

441. BUCHANAN, PAUL C. "Evaluating the Results of Supervisory Training." *Personnel:* Vol. 33, January 1957, pp. 362–370.

The author describes the development and testing of a supervisory training program into which provision for evaluating results was built from the start. Suggests that the procedure proved to be usable, both as a training device and as a means of measuring results in modified job performance.

442. DAUGHERTY, W. D. "Statistics: A Method of Influencing Attitudes." *Journal of the American Society of Training Directors:* Vol. 14, No. 5, May 1960, pp. 36–39.

Article emphasizes the value of statistical analysis of training programs and their results. It is suggested that the utilization of statistical analysis may have some effect upon the attitudes of the trainees toward the training program, especially if the trainees are engineers or other technically oriented personnel.

443. "Evaluation of Training." *Personnel Journal:* Vol. 38, No. 9, February 1960, pp. 344–345.

Brief account of the training method and evaluation procedure used in a management training program conducted under the auspices of the University of Minnesota.

444. FLEISHMAN, EDWIN A., EDWIN F. HARRIS, and HAROLD E. BURTT. *Leadership and Supervision in Industry.* Bureau of Educational Research. Monograph No. 33. Columbus, Ohio: Ohio State University, 1955. 110 pp.

This report of research into the effectiveness and results of a training course in human relations has become a classic in the field of training evaluation and a model for continuing research.

445. FRYER, D. H. "Training with Special Reference to Its Evaluation." *Personnel Psychology:* Vol. 4, No. 1, Spring 1951, pp. 19–37.

Describes a method for developing and utilizing a procedure for evaluating the effectiveness of training aids and devices.

446. GOODACRE, DANIEL M., III. "The Experimental Evaluation of Management Training: Principles and Practice." *Personnel:* Vol. 33, No. 6, May 1957, pp. 534–538.

The author suggests that subjective evaluation of management training must give way to methods of experimental evaluation and suggests a pattern for such research. The method involves criteria, controls, and statistical analysis built into the training program as an integral part rather than as an afterthought.

447. HUNERYAGER, S. G. "An Evaluation of University Executive Programs." *Journal of the American Society of Training Directors:* Vol. 14, No. 3, March 1960, pp. 37–42.

A discussion, based on a study made by the author, of the views of various firms concerning the advantages of university executive development programs.

448. KIRKPATRICK, DONALD L. "Techniques for Evaluating Training Programs: Part 4—Results." *Journal of the American Society of Training Directors:* Vol. 14, No. 2, February 1960, pp. 28–32.

The final article in a series in which the author suggests four steps for the training evaluation process—learner reaction, measured learning, changed behavior, and performance results. For the earlier articles see:

"Techniques for Evaluating Training Programs." *Journal of the American Society of Training Directors:* Nov. 1959, Dec. 1959, and Jan. 1960.

449. KROPP, RUSSELL P., and EDWARD K. HANKIN. "Paper and Pencil Tests for Evaluating Instruction." *Journal of the American Society of Training Directors:* Vol. 16, No. 11, November 1962, pp. 25–35.

Some carefully drawn guidelines for preparing tests for use in evaluating learning results in skill training programs in industry.

450. LAWSHE, C. H., R. A. BOLDA, and R. L. BRUNE. "Studies in Management Training Evaluation." *Journal of Applied Psychology:* Vol. 43, No. 5, October 1959, pp. 287–292.

Report summarizes five studies designed to evaluate the effectiveness of role-playing as a tool in management and supervisory training. Specifically, the studies were conducted to evaluate the effects of single and repeated exposures to the skit-completion method of role playing on scaled responses to sensitivity and employee orientation.

451. LUNDBERG, CRAIG, C. "Attitude Change and Management Training—A Critical Commentary." *Personnel Administration:* Vol. 25, No. 3, May–June 1962, pp. 35–43.

Author urges a re-examination of the basic objectives and assumptions underlying all management training. Drawing heavily on behavioral science research data, he challenges the utility of current evaluation techniques.

452. MAHLER, WALTER R. "Evaluation of Management Development Programs." *Personnel:* Vol. 30, September 1953, pp. 116–122.

Article assesses evaluation techniques and describes examples of systematic, experimental methods.

453. MAHLER, WALTER R., and WILLYS H. MONROE. *How Industry Determines the Need for and Effectiveness of Training.* U. S. Department of the Army, Office of the Adjutant General. PRS Report 929. Washington: G.P.O., 1952.

Detailed report of a questionnaire and interview survey of needs determination and program evaluation practices of one hundred fifty companies. The survey was designed to find out: (1) How are training needs determined? (2) What are the relative merits of different training methods? (3) What has training accomplished? (4) What are the relative merits of different training aids? Includes analysis of the literature pertaining to these questions and descriptive statements of company practices.

454. MAHONEY, T. A., *et al.* "An Experimental Evaluation of Management Development." *Personnel Psychology*: Vol. 13, Spring 1960, pp. 81–98.

Authors report a carefully designed experiment to measure the changes in attitudes produced by a management training program which relied heavily on the case study technique. Attitude scales were administered before and after the training sessions to both the participating groups and a control group of managers who were not exposed to the training material. Their results indicate that the training was partially successful in developing improved analytical ability.

455. MAIER, NORMAN R. F., and RICHARD H. MAIER. "An Experimental Test of the Effects of 'Developmental' Versus 'Free' Discussion on the Quality of Group Decision." *Journal of Applied Psychology:* Vol. 41, No. 5, October 1957, pp. 320–323.

Describes a methodology for evaluating group conference leadership methods.

456. MINER, J. B. "Evidence Regarding the Value of a Management Course Based on Behavioral Science Subject Matter." *Journal of Business:* Vol. 36, July 1963, pp. 325–335.

Presents evidence suggesting that management courses with a strong behavioral science orientation do produce significant changes in attitudes. Students in their junior year at the School of Business, University of Oregon, were utilized in this carefully controlled experiment. Information indicates that changes produced were of a kind that should contribute to future managerial effectiveness.

457. MURDICK, ROBERT G. "Measuring the Profit in Industry Training Programs." *Journal of the American Society of Training Directors:* Vol. 14, No. 4, April 1960, pp. 23–29.

Discussion of methods of calculating training benefits to the company. Article covers types of programs, costs of programs, and the ultimate returns on education. The analysis is done computing the costs in dollars.

458. RANDALL, LYMAN K. "Evaluation: A Training Dilemma." *Journal of the American Society of Training Directors:* Vol. 14, No. 5, pp. 29–35.

Article provides a realistic analysis of the attitudes and approaches taken by training personnel toward training evaluation. The author points out that the "refinement" approach to evaluation is the best in the long run and reviews the elements essential for carrying out an evaluation program of this type.

459. SOIK, NILE. "An Evaluation of a Human Relations Training Program." *Journal of the American Society of Training Directors:* Vol. 12, No. 3, March 1958, pp. 34–49.

Reports a company experience in training evaluation in which a commercially available device was utilized. Describes the course and the technique employed to build the evaluation device into the course.

460. "To Improve a Training Program, Give Tests Before and After." *Engineering News Record:* Vol. 170, June 27, 1963, pp. 38–39.

Describes the Delaware State Highway Department method for using tests before and after a training program to stimulate interest and learning. In addition to evaluative information, testing before the program began provided insight into areas which should be included in the program itself.

461. TRICE, HARRISON M. "A Methodology for Evaluating Conference Leadership Training." *ILR Research:* Vol. 5, Nos. 2 and 3, Fall 1959, pp. 2–5.

Reports a design for studying change occurring in a learning environment and specific results growing out of training into which the evaluation scheme was built. Although study was with conference leader trainees, the methodology is adaptable to other training exposures.

X. BIBLIOGRAPHIES

462. AMERICAN SOCIETY OF TRAINING DIRECTORS. *Training Research Abstracts.* Published Quarterly. Madison, Wisconsin.

An annotated bibliography of current research papers and abstracts in the field of training. Covers listings from learned journals and professional periodicals.

463. ANSHEN, MELVIN. "Better Use of Executive Department Programs and Experience of Companies Sending Executives to Management Training Courses." *Harvard Business Review:* Vol. 33, November–December 1955, pp. 67–74. (Bibliography).

Bibliography attached to this article covers extensive references to university level executive courses.

464. BESCO, ROBERT, JOSEPH TIFFIN, and DONALD C. KING. "Evaluation Techniques for Management Development Programs." *Journal of the American Society of Training Directors:* Vol. 13, No. 10, October 1959, pp. 13–27.

The authors have included an exhaustive bibliography covering management development subject matter.

465. BROPHY, J. M., and I. B. SHAW. *Industrial Training:* A Guide *to Selected Readings.* Extension Bulletin No. 1, 1948; Extension Bulletin No. 20, 1952. Ithaca, N. Y.: New York State School of Industrial and Labor Relations, Cornell University. 32 pp. (Out of print).

An exhaustive listing of titles and publications devoted to training in industry.

466. "Catalogue of Training Materials in the American Society of Training Directors' Library Operated in Conjunction with the Purdue University Libraries, Lafayette, Indiana." *Journal of Industrial Training:* Vol. 4, November–December 1950. (Supplement).

Source of information on company training programs in operation.

467. FOX, HARLAND, *et al. Leadership and Executive Development, a Bibliography.* Bulletin 14. University of Minnesota Press, 1954. 56 pp.

Annotated list of titles from the literature of leadership and executive development. Designed to provide basic information to improve methods for the development of officers for executive positions in the Air Force.

468. The International Vocational Training Information Centre. *CIRF Abstracts:* Vol. 1, 1962; Vol. 2, 1963. Geneva, Switzerland: CIRF, International Labor Office.

Abstracts are designed to provide information about all levels of vocational education and training drawn from an international list of book and periodical publications. Covers sources from industrialized as well as economically emerging countries.

469. MAHLER, WALTER R., and WILLYS H. MONROE. *How Industry Determines the Need for and Effectiveness of Training.* U. S. Department of the Army, Office of the Adjutant General. PRS Report 929. Washington: G.P.O., 1952.

Contains a comprehensive list of sources from which the authors have drawn to explore the title subject.

470. NAYLOR, JAMES C. *Parameters Affecting the Relative Efficiency of Part and Whole Training Methods: A Review of the Literature.* Laboratory of Aviation Psychology, Columbus, Ohio: Ohio State University, 1962.

A comprehensive bibliography of the literature dealing with learning, particularly with part or whole learning methods.

471. U. S. Department of Health, Education and Welfare, U. S. Office of Education. *Technological Advances and Skilled Manpower—Implications for Trade and Industrial Education,* (misc. 3509). Washington: G.P.O., 1956. 67 pp.

Lists one hundred twenty-eight annotated publications and twelve films dealing with various aspects of technological advance and skilled manpower. Includes articles on automation, atomic energy, computers, and other technical developments and their impacts on workers; manpower requirements and needs; viewpoints of management and of labor with respect to automation.

472. U. S. Department of Labor. Bureau of Apprenticeship and Training. *Training Materials You Can Use, Four Parts.* Washington: G.P.O., 1957.

A bibliography assembled in four parts covering (1) training methods and techniques, (2) skilled occupations, (3) trade and service occupations, and (4) technical, managerial, professional, and scientific occupations.

473. U. S. Department of Labor. Bureau of Labor Statistics. *Automatic Technology and Its Implications.* Bulletin 1198. Washington: G.P.O., 1956. 78 pp.

Selected annotated bibliography listed under such headings as: general surveys, automation in metalworking, mechanized bulk materials handling, automatic production of electronic goods, automatic control and processing, automatic control of machine tools, technological aspects of electronic computers, electronic data processing, economic and social implications, union attitudes and policies, and implications for business and management.

474. U. S. Office of Education. Division of Vocational Education. *List of Instructional Materials for the Supplementary Training of Apprentices and Other "On-the-job" Trainees.* Washington: G.P.O., 1950. 38 pp.

List of titles and publications devoted to work-skill training in industry.

Employee Training *in* Small Business Organizations

WILLIAM H. BUTTON *and* WILLIAM J. WASMUTH

Small business owners and managers who invest time and effort in improving the training skills of their supervisory staff can gain an important competitive advantage through increasing the ability of the firm to respond to changes in its work force, processes, or equipment.

This bulletin examines the basic steps that small business organizations may take to incorporate effective training procedures into the day-to-day operations of their business. Attention is focused upon the important advantages training provides for the organization in which job and skill training requirements for operative and clerical employees lend themselves to application of on-the-job training. Emphasis also is placed upon the importance of developing training capacity within the management and supervisory group.

Suggestions are offered on defining training objectives and needs, organizing for the training effort, utilizing principles of learning while conducting planned training on-the-job, and evaluation of training results. An appendix provides additional sources of information on training assistance for small business organizations.

"This is an excellent document and it should be a valuable tool in aiding small industries with their own manpower development programs."—RUSSELL C. MCCARTHY, *Industrial Management Council of Rochester*

Single copies are free to New York State residents. There is a charge of 50¢ each for orders of two or more copies and for all out-of-state orders.

FRINGE BENEFITS:

Wages or Social Obligation?

An Analysis with Historical Perspectives from Paid Vacations

by DONNA ALLEN

"This book by Mrs. Allen should herald new ways of appraising so-called fringes in industrial relations thinking," according to Dr. George W. Taylor, renowned arbitrator.

Dr. Taylor further comments:

> "*Fringe Benefits* provides an urgently needed new approach to an understanding of the whole system of social benefits which have been developing in private industry—a development which has entailed sharp conflicts of ideas about the answer to the question: For what are wages paid?
>
> "Mrs. Allen's study is the first, to my knowledge, to deal with the underlying nature and significance of the fringe benefit movement. Her use of the paid vacation movement to exemplify the conflict of ideas which occur in the history of a fringe development is particularly effective."

Senator Paul H. Douglas says of this study:

> "This is a good book. Better than any other, it analyzes the differences and similarities between the fast-growing fringe benefits and wages. And it tells the story of how vacations with pay have spread . . . and what have been the moving causes and consequences. Mrs. Allen has, in short, done a first rate piece of work."

1964 288 pp. Cloth, $4.75 Paper, $2.50

Licensed Dental Hygienists in Iowa.

Iowa Board of Dental Examiners
MF AVAILABLE IN VT-ERIC SET.
Pub Date - Oct67 6p.

*HEALTH OCCUPATIONS EDUCATION; *DENTAL HYGIENISTS; *PROFESSIONAL EDUCATION; *OCCUPATIONAL SURVEYS; WORK EXPERIENCE; INDIVIDUAL CHARACTERISTICS; EMPLOYMENT PATTERNS
IOWA

One hundred forty of 154 Iowa hygienists replied to the survey conducted by the State Board. Of the total 154, four-fifths completed their training after 1955 and three-fourths received their bachelor's degrees or certificates from the State University of Iowa. Sixty-seven of the responding hygienists worked in dental offices 4 to 54 hours in a typical week, or an average of 28.6 hours. Six were employed in the state university dental hygiene school and eight were employed by other governmental agencies, including public school systems and the Veterans Administration. The remainder were inactive. All respondents who reported an income indicated they earned $5,000 or more annually but only one reported earnings in excess of $7,500. Replies indicated that 74 percent of the aggregate hours worked by the hygienists were spent in performing oral prophylaxis, 9 percent in other clinical service, 8 percent in patient education, 6 percent in office management, and 3 percent in dental assisting tasks. Iowa's 154 hygienists were concentrated geographically and only 42 of 99 counties had at least one active or inactive hygienist. While the median age was 28.6, professional activity diminished between 25 and 34 and increased among hygienists 35 and over. Only 13 percent of responding hygienists were single. (JK)

LICENSED DENTAL HYGIENISTS IN IOWA

In May of 1966, 154 dental hygienists were located in Iowa and were licensed to practice there. More than four fifths of Iowa's hygienists had completed their dental hygiene training since 1955, which was the year that the State University of Iowa first awarded certificates to dental hygiene students. Three fourths of all hygienists in the state had received their training at the Iowa school, and among those whose training had been completed in the eleven years since 1955 virtually all, 9 of every 10, hold bachelor's degrees or certificates granted by the State University of Iowa.

These and many other interesting facts about dental hygienists in Iowa were collected in a survey conducted by the Iowa Board of Dental Examiners in May 1966. All but 14 of the 154 Iowa hygienists completed and returned their survey questionnaires to the State Board. Here are some other highlights of the survey findings based upon information provided by the 140 responding hygienists:

Practice Characteristics

Sixty-seven dental hygienists reported that they were working in private dental offices in Iowa at the time of the survey. Based on this count there was approximately one practicing hygienist for every 16 dentists in private practice in the state. 1/ By far the majority of these hygienists, almost two thirds, worked for only one dentist. Another 13 percent worked in only one office but for two or three dentists, and 22 percent worked in two or three dental offices and for from two to four dentists.

Individual hygienists reported working in the dental office from 4 to 54 hours in a typical week, but, on the average, they worked 28.6 hours. If a full-time hygienist is defined as one who works at least 35 hours per week, then the average Iowa hygienist practiced only part time. The aggregate time reported by the 67 hygienists actually practicing either full time or part time in the state, therefore, was equivalent to the total time which would have been spent by only 55 hygienists who were all working full time. On this basis then Iowa had one full-time-equivalent hygienist in practice for every 20 dentists in private practice.

More than half of the practicing hygienists had worked in a dental office year round, that is 48 weeks or more during the 12 months preceding the survey. However, year-round practice was more frequent among the full-time hygienists than among those practicing part time:

1/ The count of dentists who were primarily in private practice is from the 1965 Survey of Dentists Licensed in Iowa, which was also conducted by the Iowa Board of Dental Examiners.

U.S. DEPARTMENT OF HEALTH, EDUCATION & WELFARE
OFFICE OF EDUCATION
THIS DOCUMENT HAS BEEN REPRODUCED EXACTLY AS RECEIVED FROM THE PERSON OR ORGANIZATION ORIGINATING IT. POINTS OF VIEW OR OPINIONS STATED DO NOT NECESSARILY REPRESENT OFFICIAL OFFICE OF EDUCATION POSITION OR POLICY.

	Percent of practicing hygienists		
	Total	Year round	Less than year round
Total	100	56	44
Full time	44	37	7
Part time	56	19	37

Each of the full-time year-round hygienists who reported on income from their practices indicated that they earned $5,000 or more in the 12 months preceding the survey. Only one reported earnings in excess of $7,500. Almost one half of these hygienists worked on a combination salary (or guarantee) and commission (or percentage) basis. In contrast, slightly more than half of those who practiced part time or less than year round were compensated on a commission only basis.

Each practicing hygienist was asked to indicate the types of activities she performed in the dental office and to approximate the hours she spent in a typical week at each activity:

	Percent of practicing hygienists performing activity	Percent of aggregate hours spent in activity
Oral prophylaxis	100	74
Other clinical service	92	9
Time devoted exclusively to patient education	83	8
Office management	53	6
Dental assisting tasks	20	3

All of the reporting hygienists indicated they performed oral prophylaxes, and most provided other patient services such as taking radiographs and applying fluorides or devoted time exclusively to the dental health education of the patient. More than 90 percent of the total hygienists' time in Iowa offices was devoted to providing these patient services for which the dental hygienist is especially trained.

Status of Licensed Supply

At the time the Iowa Board conducted this survey, almost three in every five of the state's licensed hygienists were professionally active in the state:

	Number of hygienists	Percent of hygienists
In Iowa	140	100
Active	78	56
Employed	78	56
Full time, year round	30	21
Part time, part year, or intermittent	48	35
Seeking work as hygienist	-	-
Inactive	62	44

Furthermore, one in every five were employed as hygienists full time year round, that is, they worked 35 hours or more in a typical week and had worked 48 weeks or more during the preceding year. All of the 78 active hygienists were employed and none reported that they were seeking work at the time of the survey.

In addition to the 67 who were working in private dental offices, 6 were employed in the dental hygiene school at the State University of Iowa and 8 were employed by other governmental agencies, including public school systems and the Veterans Administration. (Three of the hygienists working in a private dental office also reported another place of employment).

Iowa had a reserve licensed supply of at least 62 inactive dental hygienists in May 1966. 2/ Five of these inactive hygienists reported that they were employed, but in an occupation other than dental hygiene.

Location

Iowa's 154 licensed dental hygienists were quite concentrated geographically . Only 42 of the state's 99 counties had even one licensed hygienist, active or inactive; furthermore, almost three in every five of the state's hygienists were located in only 4 of the 42 counties:

	Licensed hygienists	Respondents		
		Number	Percent active	Percent active full time, year round
Total	154	140	56	21
Johnson County	30	28	64	18
Polk County	29	28	61	32
Linn County	17	16	44	31
Scott County	13	13	62	8
38 other counties	65	55	51	19

2/ This count does not include any of the 14 nonrespondents who may have been inactive. Nonlicensed resident hygienists are also excluded, since the survey was conducted only among those licensed to practice in the state.

More hygienists were located in Johnson and Polk Counties than in any other county in the state. The fact that Johnson County is the site of the State University of Iowa contributes, at least in part, to the relatively large number of hygienists located there. Johnson County, a nonmetropolitan county, and Polk County, the state's largest metropolitan county, had about the same number of active hygienists, and the proportion active in each county was also about the same. However, almost one third of the hygienists in Polk County were active full time year round, while less than one fifth of those in Johnson County devoted their full time to dental hygiene.

Only two other metropolitan counties, Linn and Scott, had more than 10 licensed hygienists. Linn County had a few more licensed hygienists, but proportionately fewer active hygienists, than Scott County. However, relatively more hygienists in Scott County were active full time and year round than in Linn County.

Of the 38 other counties with licensed hygienists only 14 had more than one. One half of the respondents in these 38 counties were active. Altogether there were 8 licensed hygienists in the other four metropolitan Iowa counties--Black Hawk, Dubuque, Pottawattamie, and Woodbury. Three of the six responding hygienists in these counties were active, but none reported full-time year-round employment.

Age and family characteristics

As would be expected with the relatively large numbers who have only recently completed their college training, the average Iowa hygienist is young--their median age was only 28.6 years in 1966. However, the reported ages covered a wide range: At one end were two professionally-active hygienists of 22 years of age, and at the other a 69-year-old hygienist who retired at age 65 after having practiced in Iowa for many years.

Hygienists in their early twenties were the most likely of all age groups to be active. Professional activity diminished among hygienists between 25 and 34 years of age, but increased again among those 35 and over. Full-time, year-round employment was also most frequent among hygienists in their twenties:

	Percent of hygienists	Percent active	Percent active full time, year round
Total	100	56	21
Under 25	22	77	26
25 - 29	38	55	26
30 - 34	22	27	7
35 and over	18	64	20

These age differences in professional activity reflect the fact that marriage and family responsibilities often influence, at least temporarily, the professional activity of hygienists. The same proportion of married hygienists with one dependent child were active as were those with no children at home, but they were much less likely to devote their full time to dental hygiene. However, among hygienists with two or more dependent children professional activity was curtailed significantly:

	Percent of hygienists	Percent active	Percent active full time, year round
Total	100	56	21
Single	13	89	56
Ever married by number of dependent children			
None	23	75	38
One	21	76	10
Two or more	42	26	7

Despite the fact that family responsibilities influence the professional activity of some hygienists, married hygienists in Iowa had a relatively high attachment to dental hygiene. One half of the 116 respondents who at the time of the survey were married were also active. By way of comparison, U.S. Department of Commerce figures indicate that in March 1966 only 34 percent of the nation's wives were in the paid labor force. 3/

Even though four in every five of the 62 inactive hygienists reported they were not practicing because of full-time family obligations, many indicated that they plan to return to practice at some time in the future. Five in every six of the 30 hygienists who were at least fairly definite about their future plans indicated that they intend to return to practice. However, all but two stated they would prefer to practice part time.

Professional activity since licensure

At the time of the survey the average Iowa hygienist had been licensed to practice in the state for 7.7 years. All but 12 of the 140 hygienists reported that they had been professionally active in Iowa at some time during the years they had been licensed. On the average, the 128 hygienists who were in the state at the time of the survey and had been active there at some time, had held Iowa licenses for 7.9 years and they had actually worked in the state for 5.0 of these years. In other words, they had been professionally active for approximately two thirds of the time that they had been licensed in Iowa.

3/ U.S. Department of Commerce, Bureau of the Census: Current Population Reports P-60, No. 51.

The proportion of licensed years actively devoted to dental hygiene varies significantly though, according to the year in which the hygienist first obtained an Iowa license:

	Percent of ever active hygienists	Average years in Iowa		Percent of licensed years active
		Licensed	Active	
Total	100	7.9	5.0	63
1963 or later	30	1.9	1.7	92
1960-62	25	5.0	3.1	62
1957-59	20	8.0	3.8	50
1954-56	10	10.5	7.9	75
1953 or earlier	15	23.2	14.5	63

Hygienists licensed during the three years preceding the survey had been active for 92 percent of the total time they had been eligible to practice. This percentage falls for those who had been licensed longer. However, hygienists who first obtained their licenses ten years or more ago had devoted a relatively large proportion of their professional lives to dental hygiene.

In addition to the time devoted to dental hygiene in Iowa, about one fourth of the state's hygienists had worked at some time in the past in another state. On the average, these Iowa hygienists had been professionally active in other states for 2.8 years.

October 1967

(Editor's note: Dental hygienists in other states who were licensed to practice in Iowa were also surveyed by the Iowa Board of Dental Examiners in May 1966. Almost all of the state dental examining boards conducted surveys of hygienists licensed to practice in their respective states in 1966 or the first part of 1967. The American Association of Dental Examiners, under a contract with the Division of Dental Health, U.S. Public Health Service, is coordinating this national survey program to assist states in developing comparable information about their dental manpower resources. The preparation of this report has been made possible through the cooperation of the American Association of Dental Examiners and the Division of Dental Health, Resource Analysis Branch.)

*VOCATIONAL EDUCATION; *PROGRAM DESCRIPTIONS; *ORGANIZATION; *FOREIGN COUNTRIES
SWEDEN

Even though industry and commerce need more vocationally trained personnel, only 50 percent of the applications to vocational schools in Sweden are accepted. During the last 5 years the number attending vocational schools has increased 50 percent. The state is responsible for overall administration, advising, and financing of the vocational schools, and the municipalities, industry, and commerce are responsible for the training program. Civil service departments, the National Board of Education, county boards of education, municipal boards of education, and advisory boards share responsibility for operation of vocational schools which 75,000 full-time students attend. Both a subsidized cooperative education program where students receive theoretical training in the classroom and practical training on the job and a project method program where students receive both theoretical and practical training in school are used. Major types of schools are workshop schools, firm schools, and technical schools. Commercial education is primarily offered in general courses rather than in vocational workshop schools due to cost. Vocational schools generally offer training in industrial and handicraft trades, home economics, nursing and health occupations, and retraining programs. (DM)

SWEDEN TODAY is a series of articles in brochure form dealing with different aspects of Swedish life. A list of titles is available from the Swedish Institute, Box 3306, Stockholm 3, Sweden. The articles may be quoted or reviewed without special permission, unless otherwise indicated.

The Swedish Institute for Cultural Relations with Foreign Countries was founded in 1945. Its affairs are managed by a Council of one hundred persons and a Board with a maximum of 15 members. Under its charter the Institute is authorized to foster Sweden's cultural, social and economic relations with other countries by programs of information, cultural exchange and other means. The Institute's activities are financed by grants from the Ministry for Foreign Affairs and the Ministry of Education and Cultural Affairs, and by donations from companies and organizations. The head office is at Kungsgatan 42, Stockholm. Foreign offices are located in England at 49, Egerton Crescent, London S.W.3, and in France at 125, Avenue des Champs-Elysées, Paris 8e. Activities in other countries are carried on in association with embassies, legations, consulates, chambers of commerce, and lecturers at foreign universities. The Institute's most important duties are:

- to receive foreign stipendiaries and send Swedish stipendiaries abroad;
- to arrange invitations to scientists and visiting lecturers for temporary assignments in Sweden, and to make similar arrangements for Swedes abroad;
- to organize summer university courses in Sweden for foreign students;
- to formulate study programs for foreign experts visiting Sweden;
- to support instruction in Swedish at foreign universities;
- to support translation of Swedish literature into foreign languages and to promote cultural exchange in music, drama and the arts;
- to disseminate information on Swedish culture and social life by means of films, exhibitions and print media.

The information services of the Institute relate to all subject matter areas of general interest. Examples are education, social welfare, the Swedish economy, industrial relations, national defense, town and country planning, arts and crafts, and drama. Further information can be obtained from the Institute directly or from Swedish diplomatic missions abroad.

The entire Swedish vocational school system is in the process of being reorganized at the present time. The information in this survey has been compiled from actual or estimated data covering the years 1967 and 1968.

The present development

During the course of the past few years, questions concerning vocational training have assumed a greater importance than ever before. Industry and commerce urgently require vocationally trained personnel which, at present, cannot be found in satisfactory numbers. The number of applicants for admission to vocational schools is very high. Unfortunately, only about 50 per cent of these applicants can be accepted.

The greatly increased interest in vocational training certainly has many causes. There is no doubt that the most important cause is the profound transformation that the process of production in industry and commerce has undergone. The processes of production have become so complicated that employers must have skilled personnel to a much greater extent than before. Another important cause is that occupations which earlier did not require much training have now been so altered that a condition of working in them generally is a school-type vocational training.

The present development can best be illustrated by the following comparison: while the number of people in the vocational school age

group has increased by one per cent in the last five years, the number of students attending vocational schools has increased by as much as 50 per cent.

Vocational training is supported and promoted by three major interests: the municipalities, industry and commerce, and the State. The first two of these take the initiative concerning the training program itself and its adaptation to the changing needs of the community while the State for the most part acts as administrative advisor and financial supporter. Almost all vocational training in Sweden is sponsored by the municipalities and by industry and commerce. The only forms of vocational training operated directly by the State are the schools of navigation, the State School of Arts, Crafts and Design, and certain schools of nursing.

Organization

The central administrative agencies (also known as the civil service departments) are characteristic of Swedish public administration. They are independent bodies operating under the Government; they handle many administrative tasks which, in other countries, would be under the jurisdiction of the ministries.

The National Board of Education (Skolöverstyrelsen) is one of these central administrative agencies. It is placed directly under the Ministry of Education and Ecclesiastical Affairs. The Board is in charge of nearly the whole Swedish school system below university level. As such, the Board also heads the vocational high schools (not mentioned in this booklet), the industrial schools, and the special reeducation programs. One of the many duties of the Board is to be familiar with the course of development of industry and commerce so as to be able to adapt the educational program to meet the demands of labor. Another duty is to coordinate and plan the organization of the vocational schools and

to rationalize the training. The Board also handles the budget allotted for education and has the responsibility of distributing State grants to the different schools.

Sweden is divided into 25 counties. In each county there is a county school board and in each municipality, a local school board. The city of Stockholm and the surrounding county of the same name have a common board. The county boards, which are 24, are State institutions. They supervise most of the schools in the county and are also responsible for the planning of the county school system. In this respect they complete the planning activity of the National School Board, which mainly covers the whole country. The interests of industry and commerce are represented by a system of advisory boards. These boards include representatives of both the employers and the employees. There are similar arrangements for the health services too.

The main features of vocational training

Although Sweden has an area three times the size of England and Wales, it has a population only one sixth as large. This state of affairs presents various problems for Sweden in the development of a system of vocational schools.

At the first glance it might appear that in such a sparsely populated country the time-honored system of apprenticeships would continue to occupy a dominant position. This has not been the case, however. To be sure, traditional apprenticeship training still does exist to a certain degree with the State contributing to the employer for his expenses. The apprenticeship system is chiefly found within specialized skilled crafts and the building and construction industry. In the entire country there are at present no more than about 6,000 apprentices whose training is being subsidized by the State.

In building up an effective educational program Sweden has chosen to concentrate on the vocational school system rather than on the apprenticeship system. While recognizing the value of the training

afforded by the apprenticeship system, it was nevertheless felt that the training provided by the vocational schools had certain advantages.

In all large and medium-sized towns, as well as in many small towns and municipalities, there are vocational schools with full-time courses. The total number of students attending such schools is about 75,000. In addition there is an extensive system of evening programs in all such schools. Without digressing here on the subject of the evening programs, it might be said that the value of these courses varies considerably.

Vocational schools in the industrial and handicraft fields

Undoubtedly the most important form of vocational school in the industrial field is the so-called workshop school (verkstadsskola). Most of the students in these schools receive their entire training, both theoretical and practical, at school. However, during the past few years a new type of workshop school has emerged, the so-called incorporated workshop school or associated workshop school (inbyggd verkstadsskola). Such a school is created when a vocational school makes an agreement with a firm to provide the practical side of the training. For this the firm receives a subsidy from the State. The vocational school then provides only the theoretical education.

The training period at a workshop school is generally two years. Some courses can be completed in one year while others take three to four years.

A workshop school, which is supposed to provide young people with reasonable opportunities for choosing a vocation according to their liking and inclination, must by nature be rather large and expensive to operate. Consequently, the sparsely populated areas of the country would have been able to offer only limited educational facilities, compared to what might be offered by a town, had not special central workshop schools been established for them. There are about 40 central schools of this kind. These schools have been designed especially for young people from rural areas. They are all boarding schools.

Each central vocational school serves at least one county. These schools receive grants from the State which are particularly advantageous. The young people from the country are catered to in another way: ordinary workshop schools located in certain towns enroll students from neighboring municipalities; the rural municipalities in these cases have to pay a certain fee to the town.

A comparatively new form of vocational school is the work school or firm school (företagsskola). This is a school run by a large industrial enterprise where the student receives theoretical as well as practical vocational training. These schools are also subsidized by the State. In addition to the vocational schools that are run by the county councils, the municipalities and the State, there are a number of other private vocational schools than the firm schools just mentioned. They are sponsored by branch organizations, foundations etc; the training is run without profit. Like the firm schools, these private vocational schools differ from the others; train for a special vocation or a special vocational field. Most of them receive State grants.

Alongside the workshop schools and the work schools are the schools offering theoretical training based upon an elementary school background. These are the municipal technical schools offering three-term courses for students interested in becoming technicians. By taking an additional one-year specialized course the technician may earn an engineering degree.

The training offered by the municipal technical schools is divided into a number of branches. This form of training has recently been expanded in response to the increased demand for technically trained workers.

Commercial schools

The number of office workers has increased in recent years. It is only natural that this development should be reflected in the vocational training programs. Courses in commercial

education and office training have been considerably expanded in an attempt to meet the labor demands of both the public and private sectors.

The unexpected increase in commercial education has yet another explanation. The municipalities are well aware of their responsibility for providing young people with vocational training. But the establishing of workshop schools is expensive, even with State subsidies. By contrast, commercial education, consisting as it does mainly of theoretical subjects, is much less expensive to establish. Furthermore, even though the student may not immediately acquire a position in industry or commerce, the commercial school education serves to broaden the student's general education as well.

Schools for domestic training and home economics

Vocational schools also offer instruction in the traditional female occupations. There are, for example, home economics courses which train girls in the problems of managing a household. The usual training period is one year although shorter courses are available. In addition, there are courses in child care, catering, hospital work, etc. These schools are also a kind of comprehensive school for those who want to get a higher training in this field. One recent innovation has been the attempts made to train women for occupations traditionally held by men.

Schools for training personnel in public health and medical care

As in other vocational fields the development of public health and medical care has been considerable. New methods of care and treatment have emerged and old ones have been made more efficient. Of course, the vocational training has been adapted to these new methods. At present this training is in great expansion. Nurses are trained at special schools of nursing, some of which are sponsored by the State. Other personnel in public health and medical care are trained at the ordinary vocational schools, which are sponsored by municipalities or county councils. The

period of training is of varying length. For instance, for nurses it is 2 1/2 years, but for other personnel with simple tasks it may comprise only a few weeks.

Retraining programs and refresher courses etc.

The retraining programs have a special position in the vocational education system. Because of structural changes and technical innovations within industry and commerce there is often a need for reeducation in order to make it possible for the unemployed to find new jobs. It may be necessary for them to learn a new trade. These retraining courses may be regarded as one of the most important instruments of labor market policy. Special courses can be arranged for those temporarily unemployed (extension courses) and for fields where there is a shortage of labor.

Another two often neglected source of labor which needs special attention is the large group of women who have left their professions for a second career in the home as housewives and mothers. Many of these women, whose children are grown up, are willing to return to their former professions, if they are given the opportunity to refresh their knowledge and catch up on the latest developments in their fields. Special refresher courses are arranged for these groups of women.

STOCKHOLM; SWEDEN

This descriptive report contains information on organization, enrollment, types of vocational training, and services of the municipal vocational schools of Stockholm. Schools administered by the municipality are: (1) School for Industry and Handicraft, (2) School for Sewing Trades, (3) School for Domestic Science, (4) School for Commerce, (5) Stockholm Higher Commercial School, and (6) Stockholm Technical Evening School. The municipality provides public advisers, subsidies to private schools, scholarships, free school meals, free textbooks and materials, five libraries, field trips, health service, school buildings, government grants, practical guidance, and gymnastics and physical training. Teacher education and duties in the schools are outlined. (DM)

THE MUNICIPAL VOCATIONAL SCHOOLS OF STOCKHOLM

A Survey

The question of establishing vocational schools in Stockholm was raised for the first time in 1900, but it was not until 12 years later that these schools actually began, once the municipal council had accepted a scheme of organization based mainly upon that of the Munich Vocational Schools. In 1920, they were re-organized and different kinds of schools were separated. At the same time, their activity was considerably extended. The organization of the schools set up then has, in its essentials, existed to the present day and may be described as follows.

The central authority for vocational education is the National Board of Vocational Education, which supervises the schools. A municipal board exercises the local management of schools for vocational training and has as its chairman a Deputy Mayor /"borgarråd"/ for the City Educational Department. For the direct management of the schools and for the maintaining of direct contact between school and everyday life, there is, as a rule, an advisory committee of five members, representing each trade or group of trades. On these committees there are specialists in each type of trade. Employers' associations and workmens' unions of the trade in question appoint one representative each. A Director is responsible for the overall management of the vocational schools, and under his direct supervision there are at present five schools, each conducted by a Principal. They are:

VT006565

The School for Industry and Handicraft, The School for Sewing Trades, The School for Domestic Science The School for Commerce and one Elementary Vocational School in different trades.

A total of more than 16,000 pupils yearly profit from the above-mentioned schools.

In addition to these vocational schools, there are two more: The Stockholm Municipal Higher Commercial School (700 pupils) and the Stockholm Municipal Technical Evening School (2,300 pupils).

The Higher Commercial School and the Technical Evening School are each supervised and conducted by a board consisting of the members of the municipal Board for Vocational Training and the Principal of the School.

In all the municipal vocational schools of Stockholm the total number of participants amounts to about 19,000, 5,500 of whom are full-time pupils.

Along with the ordinary instruction in the schools, the Board for Vocational Training gives instruction on housewifery work by nine expert advisers.

The Board also places annually quite considerable subsidies at the disposal of private schools.

School for Industry and Handicraft.

After the re-organization, in 1920, of the vocational schools in Stockholm, there are in the main three different types of schools: Workshop courses, Apprentices' courses, and courses for Further Vocational Training.

A workshop course is intended for beginners in a trade and provides fundamental vocational education from the first simple instructions of handling tools to more all-round knowledge and proficiency in the trade. The object of such a course is thus to give young people such education as to enable them to obtain an employment in the trade

The pupils are generally admitted to the workshop course at the age of 15 years. After their admission, the pupils have to undergo a probation period, of about six weeks, at the branch to which they have applied. During this period the teacher is able to judge the pupil's ability to profit in a satisfactory manner from the education. If the pupil lacks the necessary aptitude for that branch, he is transferred, if there is a vacancy, to another branch of the courses more suitable to him.

At school the pupils have to do different kinds of work, thus receiving an all-round training and a knowledge of the various aspects and branches of the trade. In order that the pupils may get practical training at the same time, they have to carry out contracted jobs of varying degrees of difficulty. Out of the income from these jobs, money is paid out to the pupils according to how much diligence they have shown. The gross income from the work produced amounts to some 1,200,000 Swedish Kronor every year (approx. £ 80,000).

Along with practical training, theoretical subjects are taught 6-15 hours a week, varying for different trades. These subjects are, among others: Practical Mathematics, Engineering Drawing, Materials, Calculations, and Trade and Labour Legislation. The total duration of the instruction given in the workshop courses is 45 hours a week, varying within the different trades from two to four years.

Workshop courses are organized for the following trades:

Length of Course	
2 years	Mechanics, Engine Mechanics, Motor Car Mechanics, Aeroplane Mechanics, Welders, Tinsmiths and Platers, Electrical Installation Workers, Plumbers, Photographers, Joiners, Upholsterers, Bricklayers, Masons

	Butchers, Piano repairers, and Concrete and Cement Workers.
3 years	Instrumentmakers, Blacksmiths, Painters, Decorators and Telecommunications-operators.
4 years	Watchmakers and Cabinetmakers.

The Board of Vocational Education has always tried to keep the workshop courses in close touch with the employers in Stockholm. At the courses for Painters and Decorators, for example, the majority of the pupils are sent to various master housepainters in the town, who allow them to do local housepainting work under the guidance and supervision of masters and teachers, the pupils receiving the usual wages as apprentices. At the courses for Bricklayers and Joiners in the building trades, for instance, the pupils are first trained for five months and are then sent to building contractors in the town to take part in productive work for the usual apprentices' wages. Similar contact has also been obtained in the courses for Mechanics, in such a way that two classes alternate with each other, as a rule every 2, 1/2 months, so as to enable the pupils to attend one class for 2, 1/2 months at school, at the same time, the pupils of the other class are placed as apprentices at various mechanical factory workshops. The two classes alternate with each other during the second year.

There have been courses for women's and men's hairdressers similar to those in the workshop courses, and this has promoted co-operation between school and employers. The courses that were previously conducted by the employers themselves as private courses were taken over by the City of Stockholm in 1938. All the pupils of these courses have employment in the town and receive, in addition, practical and theoretical education at the school's hairdressing practice rooms, varying between 6 to 22 hours a week for 3 years.

Since 1926 Journeyman tests have been arranged at the workshop courses. These tests are held in the presence of certain examiners appointed by the Craftsmen's association (Guilds). If a pupil has passed his test exceptionally well, he is awarded the Medal of this Association or a prize. In addition, the pupil receives a Journeyman's Certificate.

The Apprentices' courses are, unlike the workshop courses, intended for those who are already employed in a trade and who wish to complete their practical and theoretical vocational training.

The Apprentices' courses are of different types. The pupils are taught, among other things, Knowledge of the Trade, Economics, and Trade and Labour Legislation. The courses for vocational training comprise generally two years. Training and instruction are given from 6 to 9 hours a week.

Along with the above-mentioned courses for vocational training, so-called special subjects courses have been established which are to give the pupils a more extensive knowledge of one or more of the subjects related to their trades. These courses vary from one term (4, 1/2 months) to two years. Among these apprentices' courses may be mentioned courses for restaurant cooks, for manageresses of the cold buffet, for waiters and other restaurant attendants.

The course for cooks is intended to give the beginner fundamental instruction in the art of cookery and knowledge in the organization and economy of the kitchen. By dividing the course into theoretical and practical instruction, and by arranging it partly in the school itself and partly in restaurants catering for the public, the organizers of the course have set up a comprehensive study-programme.

During their training period the pupils get many advantages. Instruction is free of charge and meals are likewise provided free. During the first six months they

receive contributions towards rent, and during the next eighteen months, so-called pupils' wages. Prizes are also awarded.

The courses for manageresses of the cold buffet and waiters are held mainly on the same lines as the courses for cooks.

They are two-year courses, and are held at the Municipal Restaurant School which is housed in the Hasselbacken Restaurant in Djurgården, Stockholm.

Since 1955 the Board of Vocational Education has organized a Navigation Apprentices' School for training of sailors, ship's motormen (greasers) and ship's cooks. In these courses young boys get a basic training lasting 21 weeks before going to sea.

Special apprentices' courses in practical and theoretical subjects are also arranged for young workers in about 50 factories in Stockholm, for instance the L.M.Ericsson Telephone Co, Ekensbergs Shipbuilding yard, Ulvsunda Mechanical Co etc. The courses are principally designed for mechanics and weak-current electricians, automechanics, shipbuilding workers etc.

In addition to the above-mentioned vocational courses, other courses are arranged for such categories as pipefitters, concrete and cement workers, weak-current and high-tension-current electricians and assistants in the colourman's trade.

Courses for Further Theoretical and Vocational Training are planned to follow upon the basic training of the Apprentices' courses. For entry it is necessary either to have attended an apprentices' course or to have worked at least two years in the trade included in the course. Instruction comprises on the one hand independent courses of different theoretical subjects and, on the other, vocational training courses forming further instruction in a certain number of subjects needed for a particular trade. The courses are organized in diffe-

rent ways according to the needs and conditions prevailing.

The instruction at these types of course is free of charge, with the exception of certain apprentices' courses and courses in special subjects and in vocational training. The entrance fees for these courses are very moderate, varying from between 5 to 25 SwKr (from 7s to £1.10. approx.)

School for Sewing Trades.

The School for Sewing Trades, being the collective name of the courses for dressmakers, tailors, ladies' tailors, milliners and for makers of readymade ladies' wear, is, on the whole, organized on the same lines as the School for Industry and Handicraft. In this school, too, the workshop course provides basic instruction, the stress being laid on practical vocational education. Theoretical instruction is given in Trade Technique, Pattern Design, Economics, Drawing, Materials, Trade and Labour Legislation, and Trade Hygiene. The courses are free of charge and held in day-schools. For each trade there has been fixed a certain probation period. Having finished the probation period, the pupil, as a rule, gets rewards for application. Continuation courses in evening schools offer the pupils a chance of receiving advanced education and of specializing at a trifling cost.

These courses are also accessible to adults, but it is a minimum requirement that the applicant should have gone through a workshop course or otherwise must prove to have at least two years' practice in the trade in question.

The course for Dressmakers is a two-to-three-year school giving chances of a continuation year (a so-called Practice Year) at a dressmaker's workshop. After finishing this practice year, the pupil is entitled to pass a journeyman's test.

The courses for Tailors and Ladies's Tailoring are a

three-year school. Like the dressmakers, the ladies' tailors can have a practice year, which, however, must be passed at the school itself.

The course for Milliners is of two years' duration. Before leaving school, the pupils have to pass a final test in order to obtain a certificate.

The course for Furriers is a four-year school and the course for Dressmakers for Furs is of three years' duration.

The course for Tailors of Ready-Made Ladies' Wear comprises fulltime instruction of 10 months' duration. In addition to the practical training in Whole Piece and Tempo Work, the syllabus contains Trade Technique, Materials, Trade and Labour Legislation, and Trade Hygiene. The probation period is two weeks. 85 per cent of the school's income from the sales of the work produced during the course is set aside for rewards for application to be divided among the pupils.

Beside the compulsory subjects, the syllabus contains optional English and French, with the stress laid on learning a limited vocabulary and some technical terms, and on the translation of easy texts.

Moreover, there is instruction in voluntary solo and choir singing free of charge for those interested.

Beside the sewing schools mentioned, there have been arranged special courses for domestic sewing. There are some 250 courses every year, comprising, for instance, Dressmaking, Sewing, and the Making of Children's Clothes.

Mothers with small children can attend the courses, as there is a nursery at their disposal where, at a trifling cost, they may leave their children while attending the course.

School for Domestic Science.

This school comprises, among other courses, training courses for domestic servants, housekeepers, and, for those serving as attendants at school meals, short housewifery courses and other courses in domestic science. Instruction comprises practical as well as theoretical subjects, such as Cooking and Baking, Theory of Nutrition and Foodstuffs, The Keeping of the Home, Domestic Economy, Health and Child Care.

Several courses are intended for girls who wish to receive fundamental training in housewifery while they are earning their living. Girls wanting further training in domestic duties, as a preparation for trades in which such training is considered desirable (e.g. for hospital nurses), can receive it in the so-called housewifery courses which last for four months.

In collaboration with the Housewives' Association, four housewifery courses for adults are arranged every year. They are intended for those wishing to set up a home. In the instruction are included practical as well as theoretical subjects. In addition there are lectures on housing problems, family hygiene, parent and child psychology, and sociology. These courses are given free of charge. The pupils have to pay 30 Sw Kr (approx. £ 2) a month for food.

In addition to these housewifery courses, short courses in Domestic Science are arranged. The duration of the instruction varies between 12 and 200 hours, depending on the difficulty of the subjects. Instruction is given in the simpler and more elaborate arts of cookery, preserving, baking, keeping the home, and domestic economy together with bookkeeping.

Courses giving instruction in cooking are arranged for housewives with large families. These courses are held in the Municipal Nurseries.

The Board of Vocational Education has organized special courses for housekeepers. Instruction lasts 39 weeks and its object is suitable training in managing a large household with foresight and economy. The education qualifies the pupils for employment at officers' messes, boardingschools, tourist centres and similar institutions.

Since 1957 a special course for training of air hostesses and hostesses for other kinds of traffic has been organized, with instruction lasting 18 - 21 weeks.

For training of domestic servants there are four full-time courses annually. The courses go on for 39 weeks and comprise practical and theoretical instruction.

Continuation courses embracing about two hundred hours are arranged for domestic servants and those who are interested in Domestic Science and have had long and qualified experience, as well as for domestic servants who have passed their final examination. If the pupil should desire to carry on her employment during the course, it will be possible for her to do the course in stages and study one or two groups of subjects at a time.

Instruction is generally free of charge for all these courses. A certain fee for food is to be paid, but the pupil may be exempted from this fee on application. The domestic servant school has a boarding-house of its own.

School for Commerce.

The commercial education carried on earlier by the Stockholm Municipal School (Stockholms Borgarskola) was taken over on July 1, 1924, by the town authorities and transferred to the schools for vocational education, where it was combined into a special group of courses, The Stockholm Commercial School.

The object of the commercial school is to give instruc-

tion to young people of both sexes who, leaving school at different stages in their education, desire to prepare themselves for occupations in business and industry, in retail shops or other commercial establishments, as well as to give supplementary commercial education to people of any age practising a trade. With their many classes and courses partly in the day-time, partly in the evenings, the school meets a great number of study requirements, from all-round education in preparation for exacting office work to specialized education in particular subjects.

The school comprises full-time basic courses for office clerks, courses for further vocational training, separate courses in shorthand and typewriting, and courses for shop assistants.

The commercial day school with full-time instruction comprises a general department of commerce, one-year commercial-enterprise courses, secretarial courses, and courses in Swedish and foreign commercial correspondence.

The general department of commerce offers courses from one to three years, and its object is to give the pupil a fundamental general commercial education. The pupils receive instruction in commercial technique, commercial geography (including knowledge of merchandise), economics, sociology, commercial law, foreign languages, and in certain extra subjects. Entry is open to those who have gone through an Elementary School.

The one-year business economy course is designed to give pupils who have sufficient general knowledge already, such knowledge as will be necessary for the execution of more exacting tasks, especially those involving knowledge of accountancy. Instruction is given in bookkeeping, commercial arithmetic, theory of commerce, and sales and publicity technique. English lessons are also included in the course

In the course for secretaries and the course in foreign commercial correspondence, instruction is concentrated on German, English, French, and commercial technique.

The courses in Swedish commercial correspondence involve typewriting, Swedish shorthand (Melin's system), the Swedish language, Swedish commercial correspondence, commercial arithmetic and handwriting lessons.

The language courses comprise courses in Swedish and English, Swedish and French, and Swedish and German. They are evening courses extending over five terms in all, the first term of which is an apprentices' course and the remaining four terms further vocational training courses. The minimum age of entry is 15 years.

The courses for office clerks consist of a two-year apprentices' course and a one-year further vocational training course and comprise technical commercial subjects.

In the commercial school too, the subjects for the further vocational training courses are designed to provide a continuation of the basic courses. To be admitted to these courses the pupil is required, among other things, to have gone through a basic course or to have reached the age of 17 years and possess the corresponding knowledge, and to have had at least two years' experience. Among other courses are tax legislation, self-assessment of taxes, statistics, office organization, window-dressing and decoration technique, and sales technique.

Further, there are special accountancy courses extending over two years. The conditions of entry are elementary knowledge of bookkeeping and "realexamen" (corresponding to the school certificate examination). Candidates are also required to have had at least five years' approved practice and to have reached the age of 25 years.

The retail trade courses for shop assistants, day courses and evening courses, comprise the following branches: textiles, ladies' clothing, men's clothing, provisions, colourman's trade, shoe-shop and iron mongery.

The day courses for shop assistants last for two years. Instruction is given in Swedish, English, theory of commerce, knowledge of merchandise, commercial arithmetic, bookkeeping, commercial correspondence and lessons in handwriting. For certain periods, the schoolwork is substituted by practical training in shops.

The evening courses extend over three years of study, the first two years' instruction of which is considered as a basic course and the last year as a further vocational training-course. The courses may be entered directly after pupils have left the Elementary school.

Seven practice - rooms are installed in the premises of the Commercial School provided with a stock of goods for the above branches.

In co-operation with insurance enterprises, The Swedish Bank Union and so on, a number of special courses of varying length have been arranged.

Gymnastics and Physical Training.

The majority of the pupils of the full-time day schools have gymnastics instruction from one to three hours a week. The full-time vocational training schools have, besides, their own athletic association in which the pupils take a keen interest. The associations have many sections, among which may be mentioned football, ice-hockey, table tennis, badminton, and shooting. An extensive and fine collection of prizes bears witness to the fact that the schools have fostered many capable athletes among their pupils. The athletic association at the Industry and Handicraft school also publishes an annual report to which the pupils themselves have contributed.

Teachers.

The practical instruction is conducted by teachers appointed annually, whose duties comprise 43 hours per week in the School for Industry and Handicraft, and 30 hours per week in the School for Domestic Science. The teachers of theoretical subjects are either full-time or part-time teachers. Special-subject teachers in the School for Industry and Handicraft have to instruct for 29 hours per week, and in the School for Commerce 24 - 30 hours.

The teachers in the School for Commerce have, to a large extent, a university degree or the degree of an institute of technology or the School of Economics ("Handelshögskolan"). All the teachers of the School for Domestic Science are trained cookery teachers. Those teaching on the practical side of Industry and Handicrafts have, as a rule, attended special courses and have had long practical experience (at least seven years).

The Stockholm Higher Commercial School.

In 1945 the higher department of the commercial school was transformed into a so-called "Handelsgymnasium" (a higher commercial school). An old private higher commercial school (Frans Schartaus handelsgymnasium) was added to the former school in 1952. It consists of three departments, namely, a two-year day course, a one-year day course for pupils with the matriculation examination (studentexamen) and a four-year evening course. The three lines are intended to give the same standard of knowledge and are completed by the same examination. The final examination entitles the pupil to enter the School of Economics.

The Stockholm Technical Evening School.

The object of the Technical Evening School is to make it possible for young people employed in commercial and industrial life to obtain, alongside of their daily work, a general cultural education and the technical training that, besides practical experience, is required for technicians such as foremen, draughtsmen and assistants in technical offices and laboratories.

The school comprises a lower and a higher department, the first one giving three years' and the second two years' instruction. In the lower department the subjects taught are Swedish, German, English, Arithmetic, Physics, Chemistry, and Drawing. This department is also meant to prepare the pupil to enter the Royal Institute of Technology in Stockholm.

The instruction in the higher department specializes in various technical sides such as engineering technics, motor-engine technics, steam-engine technics, strong and weak-current electrotechnical engineering, etc.

Other Instruction.

Advisers. At the service of the public there are nine advisers, namely one head adviser as a chief, an adviser on house-furnishing, four advisers on domestic problems and three advisers to give information concerning the care of bedding, sewing, weaving and knitting.

The principal task of the adviser on house-furnishing is to be of service to young couples who are going to start a home and family. The adviser is to help them to plan wisely when procuring equipment, such as furniture and other fittings for their home, so as to fit in economic with practical and aesthetical requirements. The advice is given partly through personal consultation, and partly in connection with courses and lectures. Exhibitions of furniture and textiles are also held, as well as special displays of glass, china, and pictures.

The duty of the advisers on domestic problems consists of demonstrations of various kinds in food and utensils, preservation, washing, etc. short cookery courses, lectures and the giving of advice on food and nutritional questions, kitchen planning, the economic organization of domestic work.

Under the direction of the head adviser there is also a special section of Dressmakers Workshops (systugor) organized in 1943. Here the public is given advice and guidance in washing, ironing, darning, mending, the daily care of one's clothes, etc. Instruction is also given in renovation and alteration of old clothes.

As far as room permits, these "Systugor" are also made available as workrooms for those interested in sewing who have no sewing machines of their own. Every visitor to the "Systugor" pays a fee of 50 öre (approx. 7 d) each time. That the interest in this activity is great is shown by the fact that the number of visitors was more than 28,000 during 1960. There are at present ten "systugor" in various parts of Stockholm.

Municipal Subsidies to other Vocational Institutes.

To make it possible for private and non-municipal vocational institutes to work in their respective fields, the Municipal Board for Vocational Training grants annually considerable amounts totalling about 780,000 SwKr, (£ 53,000), to about 15 institutes. Among those receiving subsidies may be mentioned the Vocational School for Book Making Craft, the Fredrika Bremer Society's Higher School for Ladies, Gålö Agricultural School, and Sunnerdahl's Practical Junior School.

Scholarships.

State scholarships may be granted to pupils without private means or of small means. These scholarships are, however, granted only to pupils attending full-

time courses of at least four months' duration. The scholarships, as a rule not exceeding 75 Sw Kr (about £ 5) a month, are granted to necessitous pupils living at home while attending school. A pupil without private means, who has to be accommodated outside his home, may be granted a scholarship as a rule not exceeding 175 Sw Kr (about £ 12) a month.

Students who are highly gifted may be granted loans out of the public study loans fund. The loan is given without any security being required.

Besides the above State Scholarships and loans, the students can obtain scholarships from private societies and unions and from the Municipal Scholarships' Fund.

School Meals.

Since 1947 free school meals have been arranged for pupils in schools with full-time instruction.

Textbooks.

All the pupils registered in Stockholm and attending workshop courses, the vocational training departments of the apprentices' course or other courses with full-time instruction that are in most respects comparable to workshop courses, receive free textbooks and free educational materials.

Libraries.

In the schools there are five libraries intended for teachers as well as for pupils. The libraries contain technical literature, sociological literature, and, to some extent, works of fiction. The libraries comprise in all some 17,000 volumes.

Travelling Scholarships (Bursaries) for Pupils.

Schools that are of such recent foundation as those for Vocational Training have in general not obtained any great number of funds. The only fund allotted to the proper vocational schools for travelling scholarships is the Anders Granholm Stipendiary Fund. The object of this fund is to make it possible for apprentices in schools for blacksmiths and metal workers in Stockholm to practise the corresponding trade abroad for at least three months and after that to continue their work in Stockholm. The higher commercial school has also some funds available for prizes for its cleverer students.

Travelling Scholarships for Teachers.

Each year the municipal Board for Vocational Training usually distributes 7,500 Sw Kr in allowances to teachers, chiefly for travels abroad.

Travelling of school classes.

It is considered highly important that the pupils of the schools should now and then make visits to suitable commercial concerns and to museums and other places so as to carry out study suitable for their vocational education.

Full use is made of opportunities of paying educational visits to firms and institutions inside Stockholm and in its surroundings. Moreover, study groups from the schools have visited large or special enterprises of various kinds in the country, such as Bofors, Sandviken, Hagfors Mills, Fagersta, Untraverken, etc.

Health Service.

The schools employ two part-time physicians whose

principal duty is to examine the newly-enrolled pupils. They have, further, to examine regularly all pupils who ought to be under special supervision owing to their state of health, and to recommend them to apply to specialists and policlinics. At the instance of the parents, the pupils may undergo inoculation, and each year the pupils have their lungs X-rayed.

Under certain Government regulations, pupils who have been injured at work are entitled to certain sick-relief money during the time they are unable to work. In case of permanent disablement they may be awarded a life-annuity.

School buildings.

Owing to building restrictions caused by the scarcity of material during the present time of crisis, the building problems have not yet been solved so as to keep pace with the present development of the vocational school system, which is expected to reach its culminating point at the beginning of the 1960's. The instruction is chiefly concentrated in seven school buildings in Stockholm, viz. 35 Polhemsgatan (the School for Industry and Handicraft and the Sailors' School), 85-91 Kungsholmsgatan (the School for Sewing Trades and the School for Domestic Science), 75 Kungsholmsgatan (the Commercial School), Hasselbacken (the Restaurant and Hotel School), Drottningholmsvägen 82 (The Technical Evening School), Stigbergsgatan 26 (The Higher Commercial School), Västberga gård (Västberga Elementary Vocational School).

Government Grants.

Since 1921 grants have been paid, according to the provisions of a Government Act, to municipal institutions for vocational education. Government grants are also given for educational material and libraries.

The Government grant covers at present a minor part of

the cost, that is, about 45 per cent.

Practical Guidance in the Schools for Vocational Training.

As part of the vocational guidance for pupils in the finishing classes of the Elementary School in Stockholm, the Vocational Schools arrange leisure-time occupation. The idea is that young people should be able to try one or more vocations. The young elementary-school pupils are allowed to visit the workshops and classrooms of the Vocational Schools, to see how the trades are carried on and to try to make use of tools, machines and materials. They also receive information about the different conditions connected with the trades. During one session lasting a year the pupils will be able to try out four different trades. Pupils who so desire may choose a more extensive spare-time course in one trade. The courses are held two afternoons a week, as a rule two hours each time. There are about 90 working-groups a year with some 1,500 pupils attending. This practical guidance of spare-time activity has proved to be of great importance for the choice of a vocation by young men and women.

In recent years there has been a general tendency to make the education in the highest forms of the Elementary School more practical. Some elementary-school pupils of Class VIII (at the age of 14 - 15 years) have thus been able to get a preparatory vocational education by attending the courses of the Vocational Schools three days a week during their eighth school year. They have thus carried out their 8th school year by spending every week half of the time at a Vocational course and half of it at the Elementary School.

SWEDEN

The 360 agents in 290 local employment offices operated by 25 county labor boards cooperate with private enterprise to determine existing and potential job vacancies and overages in the work force. Unemployed workers report to local employment offices weekly to remain eligible for benefits. The National Labor Market Board is responsible for determining where adult vocational courses are to be held, the trades in which training will be offered, trainees to attend, living allowance of the trainees, and employment for graduates. The organization and administration of the courses are the responsibility of the Board of Education. Courses are usually established in areas of high unemployment. In September 1965, there were 43 training centers offering 602 courses and 316 additional courses were offered in 130 locations. Trainees must be 21 years old, registered for work, and found suitable for training in the chosen trade. Normally 75 to 80 percent of those completing a course find employment in the area for which he was trained. The appendixes list the trainees financial allowances and the courses offered. (DM)

Vocational Training for Adults in Sweden

by Anna Wiman

SWEDEN TODAY is a series of articles in brochure form dealing with different aspects of Swedish life. A list of titles is available from the Swedish Institute, Box 3306, Stockholm 3, Sweden. The articles may be quoted or reviewed without special permission, unless otherwise indicated.

The Swedish Institute for Cultural Relations with Foreign Countries was founded in 1945. Its affairs are managed by a Council of one hundred persons and a Board with a maximum of 15 members. Under its charter the Institute is authorized to foster Sweden's cultural, social and economic relations with other countries by programs of information, cultural exchange and other means. The Institute's activities are financed by grants from the Ministry for Foreign Affairs and the Ministry of Education and Cultural Affairs, and by donations from companies and organizations. The head office is at Kungsgatan 42, Stockholm. Foreign offices are located in England at 49, Egerton Crescent, London S.W.3, and in France at 125, Avenue des Champs-Elysées, Paris 8e. Activities in other countries are carried on in association with embassies, legations, consulates, chambers of commerce, and lecturers at foreign universities. The Institute's most important duties are:

- to receive foreign stipendiaries and send Swedish stipendiaries abroad;
- to arrange invitations to scientists and visiting lecturers for temporary assignments in Sweden, and to make similar arrangements for Swedes abroad;
- to organize summer university courses in Sweden for foreign students;
- to formulate study programs for foreign experts visiting Sweden;
- to support instruction in Swedish at foreign universities;
- to support translation of Swedish literature into foreign languages and to promote cultural exchange in music, drama and the arts;
- to disseminate information on Swedish culture and social life by means of films, exhibitions and print media.

The information services of the Institute relate to all subject matter areas of general interest. Examples are education, social welfare, the Swedish economy, industrial relations, national defense, town and country planning, arts and crafts, and drama. Further information may be obtained from the Institute directly or from Swedish diplomatic missions abroad.

VOCATIONAL TRAINING FOR ADULTS IN SWEDEN

State-organized vocational training for adults was introduced after World War II as one of the measures to be taken for preventing unemployment.

There are other steps, too, for combatting unemployment and it is the task of the National Labour Market Board to decide on the measures to take in case of unemployment.

In order to gauge the situation on the labour market at any given moment, the Board receives continuous information on local developments from the local employment offices via the county labour boards (25 in number). The network of local employment offices is vast (290 in number). In addition there are 360 local agents. Since there are no private employment offices, the State service is able to present a fairly complete picture of the actual demand for labour and for jobs.

The efficiency of the system is enhanced by co-operation between private enterprises and the county labour boards, the employers keeping the boards informed of existing vacancies and notifying them of forthcoming curtailments of production or planned shutdowns several months before the action is taken. [1]

Usually, notice is given at the earliest opportunity to allow time for preparing the placement of workers in other jobs.

On the labour side, unemployed workers covered by unemployment insurance are entitled to benefits from the union-operated, State-subsidized funds, provided, however, that they report every week to

---

[1] There exists an agreement between the Swedish Employers' Confederation and the Labour Market Board that such notification should be given at least two months in advance.

the local employment offices. This provision helps to keep the local records up to date, especially in occupations where the majority of the workers are covered by insurance. The publicity given to government-sponsored programmes for the relief of unemployment also induces non-insured workers to report more regularly at the employment offices, since they are encouraged to seek help.

There are two national boards concerned with the organization of vocational training for adults: the National Labour Market Board and the National Board of Education.

The Labour Market Board and the county labour boards play an important part in the implementation of the training programme for adults. It is their task - in addition to the ascertainment of the employers' present and expected future needs of skillded manpower, the numbers of unemployed in need of training and their geographical distribution - to decide where the courses are to be arranged and the trade in which training should be given, to select the trainees and assign them to the different courses, to grant and pay the trainees' living allowances and related benefits during the course. Finally, it is the task of the county labour boards to find employment for trainees completing the course.

The organization, the administration and the running of the courses are carried out by the Board of Education. [2]

Locally, the Board is assisted by a course committee consisting of four members, two of whom are educators and the other two representatives of the county labour board.

When a county labour board finds it necessary to provide training facilities for a great number of unemployed the following measures are to be taken.

If the capacity of the existing courses is sufficient, the unemployed will be sent to those courses. If not, the competent county board, in informing the Labour Market Board of the situation, proposes new courses, the trades in which training ought to be given, and where the courses should be organized. If accepted by the Labour Market Board,

---

[2] Since January 1962 the county labour boards have assisted in administration of the courses in bookkeeping, introductory shop training, and so on.

the proposal will be sent to the Board of Education along with the Board's recommendation. And from this point, it is the task of the vocational educational authority to take the necessary steps.

The Board of Education is divided into several divisions, and it is the division called P3 which deals with the training of adults.

When planning new courses, the first task is to prepare a curriculum for the trade in question and to arrange for the workshop. These preparations settled, the workshop has to be equipped with machines, tools, and so on.

The Board of Education has also to deal with the recruitment and training of teachers.

All measures mentioned have to be accomplished rapidly because it is of great importance - from both the psychological and the economic points of view - that measure for the relief of the unemployed are carried out without delay.

Geographical distribution of the courses

In some countries such as Britain and the Netherlands, the training of adults is concentrated in a number of training centres. In Sweden, the courses for unemployed are usually established in areas with large numbers of unemployed. In times of increasing unemployment, this system will result in a situation where lots of courses are spread out all over the country, singly or in smaller groups. At present, the tendency is to bring together more and more courses in training centres. In September 1965, there were 43 training centres offering 602 courses. But there are still about 316 courses dispersed over 130 places throughout the country.

The Swedish system facilitates the recruitment of the unemployed and the handicapped. Candidates who are able to go home every day or every weekend are more attracted by the possibility of receiving training than those obliged to live far away from their families. But from the administrative, economic and educational point of view, the Swedish system involves certain inconveniences.

Types of courses

There are so-called central courses, arranged and entirely financed by the Board of Education. To these courses applicants can be assigned from any part of Sweden. Municipalities can arrange so-called municipal courses and receive subsidies covering part of the costs. The municipal courses serve primarily local needs but vacancies can be filled with applicants from other areas.

According to the trainee's background, there are:

a) Training courses for a new job (retraining courses) which are arranged for those over 21 years of age who have already worked in a trade but, owing to the shortage of employment in that particular trade, must be taught a new trade.

b) Continuation courses which are provided for experienced workers over 21 years of age to improve their skills or to enable them to acquire new skills in their own trade.

Selection of trainees

As mentioned before, the Swedish training programme for adults was introduced as one of the remedies for unemployment. Nowadays the training programme includes more and more of those who, although still in employment, are soon likely to be out of work, as well as a large number of handicapped and also certain aliens.

It is the task of the county labour board to recruit for the courses. The general conditions for eligibility are that the applicant:

1. is at least 21 years old;

2. has registered for work with an employment office; and

3. is found suitable for training in the trade chosen.

In addition to these general conditions, special conditions apply to certain trades.

In order to ascertain the aptitude of the applicants, there will be an

interview and sometimes an aptitude test. The interview provides data concerning the applicant's earlier work and his attitude toward training.

If a trainee is later found not suitable for the trade chosen, he can be taken into training for another trade or may ultimately be withdrawn from further training.

Special training allowances are paid out of public funds to those attending the course. (See App. 1.)

Training of teachers

Before obtaining appointment as teachers, the candidates, who are usually recruited from among skilled workers, have to take a 12-week training course, divided into six periods. These courses are carried out by the same division of the Board of Education which deals with the training of teachers for vocational schools for youth. The courses, usually located in a training centre for adults, include a number of lectures on Demonstration Techniques, Theory of Teaching, Technique of Lecturing and so on, as well as practical training, which takes place in workshop conditions. In the intervals the candidates are acting as teachers while pursuing their studies at the same time.

The training of teachers is considered very important, and at present such courses are permanently going on at two training centres.

Method of training

The training courses for adults usually last one year, at the rate of 45 hours per week. However, they may be longer - there are courses lasting two years. Sometimes they are shorter, owing to the nature of a certain trade. The training is as a rule given entirely in a training centre or in a separate course.

The main part of the training is practical, but theoretical training is also given in the courses for adults. Experience has indicated the

necessity of brushing up the knowledge acquired at the elementary school, because many trainees have never had any other education since leaving school and have forgotten much of what they learned there. The theoretical training includes such subjects as qualities and use of materials, drawing and arithmetic. But the subject matter used is taken from the trade for which the training is intended.

Usually, one teacher is in charge of the entire course, comprising 12 to 20 trainees, giving both practical and theoretical training. Sometimes, however, the theoretical training is provided by one or several specialized teachers, who combine this task with teaching at vocational or other schools or serve at several courses for adults. At training centres, the training is often carried out by specialized teachers. With the training centres dominating more and more, this system will become increasingly common.

In general the admission of trainees is not bound to any special number or dates. Candidates can - in almost all kinds of courses - be accepted from day to day, so that inconvenient periods of waiting are avoided. This also means that trainees finish their courses successively, so that there is no congestion in the employment offices, and once again waiting is avoided. Given this individual method, every trainee can complete his course in accordance with his own capacity for understanding. Every trainee, however, has to complete the same list of work projects, compiled by the P3-Division. If possible, trainee are assigned for this purpose to making things of use for other courses or for sale.

When preparing a curriculum, the first question is: What must the trainees be taught? The curriculum must embrace not more and not less than what is necessary for practicing the trade in question. As opposed to the education of young people, this training must be carried out with a view to meeting immediate requirements.

In order to arrive at a well-working programme, the curriculum is prepared in cooperation with experts from industries.

(Certain trades in which training is given are exemplified in App. 2.)

Local administration

The local responsibility for a course lies in the hands of the director, who is directly subordinated to the National Board of Education.

The function of the director is advisory, co-ordinating and supervisory. He is responsible in every respect for the smooth running of the whole training organization.

In order to assist the director in management, there are periodic checks and inspections by the Head Office. The work projects involve a constant communication between field and Head Office, with the latter ordering projects and checking the progress of project work at the courses.

Co-operation between the two Boards dealing with training for adults and industry

Close co-operation between the Boards and industry in the matter of training adults is of great importance; without it, successful training would be impossible.

Accordingly, the two Boards have considered it necessary to have representatives of industry participate on the general policy of training and in carrying it out. With regard to the general policy, this co-operation is achieved through a Central Coordinating Body with representatives from the Board of Education and the Labour Market Board, from the Swedish Employers' Confederation, the Swedish Confederation of Trade Unions and the Central Organization of Salaried Employees.

The Body considers and advises in matters relating to the scope of the training, the number of the men and women who should be trained and the trades in which training ought to be given.

In addition to the Body, there are local committees. These committees consist of representatives of organized industry, both employers and workers, engaged in the practice of the trades concerned, and of the County Labour Board. These committees consider the trainees' capacity to learn and the teachers' capacity to teach and give advice on matters relating to training.

There exists, however, co-operation established directly between the experts of the Board of Education and those of the different trades, concerning curricula, equipment, and so on.

Results

The Swedish system of establishing training courses when and where the need arises gives a high degree of mobility and speed, which is of great value from the psychological point of view.

The fact that the practical training is, as far as possible, given in the form of production work is also of great value in the training of adults, since it gives them an approximation of the atmosphere of industrial work.

Experience has shown that it is quite easy, even in a period of rising unemployment, to find suitable jobs for those who have undergone a thorough training course. The training of unemployed has been found the cheapest and most productive measure against unemployment, and it is receiving increased emphasis. The number of courses is rapidly growing. The rapidity of expansion is proved by the following example. In the period from July 1956 to June 1957, 79 courses were going on. The corresponding figure for the period from July 1965 to June 1966 was about 900 courses.

As for the chances of finding a new job, usually about 75-80 per cent of those completing the course get employment in the trade for which training has been given or in related trades.

1966

Appendix 1

Trainee benefits

Trainees receive living allowances, rental allowances, family supplements and special supplements from the Labour Market Board through the county labour boards. The living allowance is maximized at 450 kronor per month.

The rental allowance for an unmarried trainee is 125 or 175 kronor per month, according to the local cost of living. A married trainee receives an amount equal to the rent actually paid and, if he undergoes training outside his place of domicile, an additional allowance for his own rent equal to that of an unmarried trainee.

Family supplements include:

a) a maximum of 75 kronor per month for the wife (husband), if the training is given in the place of domicile, or a maximum of 220 kronor per month if the training is given outside the place of domicile, and

b) a maximum of 60 kronor per month for each child under 16 years of age; in special cases, 150 kronor.

Special supplements can be granted to cover travel expenses (also daily travel between the place of domicile and the place where the training is given), study material, work clothes, etc.

The benefits are tax-free.

Since September 1958, an unemployed trainee covered by unemployment insurance may choose between the insurance benefits and the Labour Market Board allowances.

Appendix 2

Vocational training for adults

Training for a new trade:	Length of course
Automobile and tractor mechanics	48 weeks
Automobile electricians	2 years
Automobile service (cleaning, lubricating, putting in spare parts, simple repair)	6 months or 3 months
Repair of motorcycles, bicycles, motor scooters	32 weeks
Electrical installation	48 weeks
Electrical armature winding	48 weeks
Repair of instruments and machinery in the field of electronics, radio, etc.	72 weeks
Machinists (different trades) [1]	12-48 weeks
Precision machinists	48 weeks
Sheet metal workers	48 weeks
Welders	20 weeks
Radio, television and radar technicians	72 weeks
Clerical and commercial work	18-20 weeks
Seamstresses in clothing industry	3 months
Domestic work, including sewing and nursing	4 to 5 months
Cook and head waitress	20 weeks
Continuation course:	
Building (various specialities) [2]	2-14 weeks

---

[1] Turners (centre lathe turning)
Turners (capstan lathe turning)
Fitters
Milling machine operators
Grinders, etc.

[2] Cement gun worker
Cement plasterer
Carpenter
Concrete worker
Light concrete worker
Plumber
Bricklayer, etc.

Sweden is situated in the eastern half of the Scandinavian peninsula. It is the fourth largest country in Europe, with a surface area nearly twice that of Great Britain and somewhat larger than that of California. Almost 1000 miles from tip to toe, it presents a wide variety of landscape. The fertile, gently undulating plains of the south are a complete contrast to the barren mountain slopes and glaciers of the far north, with its Arctic vegetation. Sweden's highest mountain is Kebnekajse, 2117 meters (6942 ft. above sea level). In between lie great forests broken by thousands of lakes and rivers. The Gulf Stream off the western coast of the peninsula gives a climate that is very mild for the northerly latitude. Sweden is widely known for its "sunlit nights" but tourists should remember that it is only in the small area above the Arctic Circle that the sun - for two months in the summer - shines all round the clock. Sweden has a population of 7.7 million, which means an average population density of 46 persons per square mile. The capital, Stockholm, with its suburbs has a population of 1.1 million. Sweden is a constitutional monarchy, a member (since 1946) of the United Nations, of OECD, GATT, and other international organizations. In the 1950's, Sweden joined with Denmark, Norway, Iceland and later Finland to form the Nordic Council. In 1960, the EFTA agreement was signed in Stockholm. The language of the country is Swedish, which has a great deal in common with Norwegian and Danish. Norwegians, Danes, and Swedes can talk to each other each in their respective languages. The Swedish monetary unit, the krona, is roughly one fifth of the U.S. dollar and one fourteenth of the English pound.

Organizing and Conducting Young Farmer Programs in New York State

Harold R. Cushman

INTRODUCTION

The emerging pattern of agricultural instruction at the secondary school level in New York State includes specialized programs of instruction during the junior, senior, and post high school years in agricultural business, agricultural mechanization, conservation, farm production and management, and ornamental horticulture. This shift in the purpose of agricultural instruction from preparation for farming to preparation for the entire spectrum of occupations in which agricultural knowledge and skills are needed has been vastly accelerated by the passage of the Vocational Education Act of 1963.

The specialized program during the post high school years in the area of farm production and management is called the young farmer program. It is a well established program strongly oriented to the business management concerns of young men who are entering farming. In addition to receiving systematic instruction, enrollees in this program may also benefit from membership in a local young farmer association. This is an informal organization of young men who are in the process of establishing themselves in farming.

The purpose of this bulletin is fourfold: to explain in detail what the young farmer program is; to assist boards of education, school administrators, advisory boards, and teachers of agriculture in making suitable administrative arrangements for such programs; to assist teachers in organizing, conducting, and evaluating young farmer programs; and, finally, to make the experience of outstanding teachers of agriculture available to persons in out-of-school educational programs here and abroad.

WHAT IS THE YOUNG FARMER PROGRAM?

Who Are Our Young Farmers?

A young farmer is defined as a young man 16 or over who is out of school and in the process of becoming established in farming. Although young women, especially the wives of young farmers, sometimes attend meetings, the young farmer program is not primarily intended for them. Although persons below 16 who are exempted from compulsory school attendance might participate, they seldom do so.

According to a recent study[1], beginning dairy farmers in New York State have a mean age of 26 within a range of 17–39, are married (80 percent), and have an average of two children. They and their wives have completed an average of 12 years of school, and only 13 percent of them did not graduate from high school. Nearly three-fourths of this group were enrolled for varying amounts of agricultural instruction during high school, and 50 percent completed four years of an agricultural program. Two-thirds of them were 4-H Club members. One-fourth of the group attended one or more years of college. Fifty-six percent of the beginners owned their farm businesses, 42 percent were partners, and only 3 percent rented. Many attained their farming status as owner, partner, or renter directly, though most of them worked as farm laborers usually on the home farm. The study further showed that beginning dairy farmers rank higher than the average commercial dairyman in New York in size of business, level of production, and labor efficiency. The study also revealed that many in this group must increase the size of their business and their incomes.

The Young Farmer Needs Help

A young man attempting to establish himself in farming today faces a challenge because of current trends in agriculture, the complexity of farming operations, and the changing role of the farmer in our society. The years during which he seeks to establish himself are critical and obstacle-ridden.

First, he must possess a farm business of adequate size. In view of rising land values and the accelerated trend toward mechanization, the young farmer must control $40,000 to $60,000 in order to buy a farm large enough for economic operation. His credit needs are great whether he enters farming through farm employment, renting, partnership, inheritance, or off-farm employment. He has many kinds of business agreements and commitments to make involving large sums of money. In some cases, he may be faced with the crucial decision of selecting a farm.

Secondly, the young farmer must develop and exercise his abilities in farm business management. His profits will be determined by such factors as the size of business, rates of production of crops and animals, labor efficiency, price relationships, combination of enterprises and capital efficiency. An understanding of these factors and ability to manage them wisely are essential to the young farmer.

In his day to day decisions, the young farmer must apply the findings of research, outlook information, price trends, and new developments in mechanization to his farm.

As he plans and operates his farm business, the young farmer must be able to answer many questions: What are the returns for hours of labor from various enterprises? What does it cost to produce a hundred pounds of milk? What are the returns over feed cost for specific animals? What was the change in net worth last year? The answers to such questions must come from an analysis of carefully kept records and accounts. Unless he follows proper business procedures, the young farmer will be forced to make critical decisions "by guess and by gosh." He will be "flying by the seat of his pants."[2]

Conducting a farm business involves many management decisions and many skills. The young farmer must decide which practices are best for him to follow and put them into effective operation on his farm. In addition he must make improvements in his basic tools of production: buildings, land, livestock, and machinery. The young farmer cannot afford to make mistakes. Errors in judgment are much more serious financially for the young farmer of today than they were for his counterpart in the past.

During the period of establishment, the young farmer and his wife have to make adjustments to marriage, to parenthood, and to citizenship and leadership responsibilities. He and his wife must learn to work together, to develop a satisfying home and family life, and to plan their recreation. They must learn to cooperate with other adults, participate in community organizations, and thus fulfill adult roles in the community. Young farmers and their wives need help and counsel while attempting to make these adjustments.

How the Young Farmer Program Can Be of Help

The young farmer program is designed to assist young men in establishing themselves in farming. A young farmer may be considered to be established when he owns approximately 50 percent of his farm business; is proficient and experienced in making management decisions and in performing the required manipulative skills for his type of farming; looks to farming as the main source of his livelihood; provides himself and his family with a standard of living at least average for the community; and is accepted in the community as a responsible participating citizen.

The young farmer program is educational in nature and provides systematic instruction and an opportunity for participation in the local young farmer association.

In systematic instruction, young farmers, with the help and guidance of a teacher of agriculture, identify the problems confronting them in their individual farm business situations, consider alternatives and plan solutions to these problems as a result of group and individual instruction, and apply the solutions on their farms.

A local young farmer association is an organization of, by, and for young farmers. Here young farmers can gain experience in leadership, cooperation, and community service, and can plan and conduct recreational and social activities of interest and benefit to themselves and their families.

The young farmer program has a number of strengths. It is directed by a teacher of agriculture who has specialized training in planning, conducting, and evaluating educational programs for young men who are out of school. By concentrating his attention on a relatively small number of young farmers with closely related needs, the teacher is able to provide systematic instruction based on specific concerns of the participants. The program of instruction is broadened and enriched by an organization of young farmers. The physical facilities of the school, especially those of the agriculture department, are available to the participants. The services and efforts of the community agencies are enlisted to help meet the needs of the young farmers.

MAKING ADMINISTRATIVE ARRANGEMENTS

Th Changing Setting in Which Young Farmer Programs Are Administered

Young farmer programs in New York State have traditionally been conducted by teachers of agriculture under the administration of local boards of education. Since only one teacher of agriculture was usually employed in each school district, he was responsible for teaching the agriculture courses offered to secondary school students, advising the local chapter of the Future Farmers of America, and organizing and conducting the young farmer program. As an employee of the local board of education, the teacher of agriculture has been subject to the same administrative procedures as other teachers. The normal administrative channel has been from teacher to high school principal to board of education. Schools having a local director of adult education also utilize his administrative services. In addition, Article 93 of the Education Law requires a board of education maintaining vocational instruction to appoint an advisory board representing the local trades, industries, and occupations. For a department of agriculture, such a board has usually been composed of practicing farmers, chosen because of their experience, who represent the dominant agricultural enterprises of the region. The young farmer group has usually held evening meetings at the high school where classroom, shop, and laboratory facilities are available. Meetings have also been held at other locations, including members' farms. In addition, the teacher has given individual instruction to the young farmers.

While this administrative setting still predominates, a number of changes are taking place. One involves the reorganization of school districts. Because of financial pressures and the desire to offer a broader program of instruction, the number of school districts is declining. Consequently, school districts are generally larger and the secondary school agriculture department serves more students. The trend toward providing agricultural instruction under the Board of Cooperative Educational Services has had similar effects.

A second change has been the gradual shift in agricultural instruction from preparation for farming to preparation for all fields of agriculture. This movement was vastly accelerated by the passage of the Vocational Education Act of 1963 which broadened the purpose of vocational agriculture to include preparation for the entire spectrum of occupations in which agricultural knowledge is needed. The emerging pattern of agricultural instruction in New York State now includes specialized instructional programs during the junior, senior and post high school years in agricultural business, agricultural mechanization, conservation, farm production and management, and ornamental horticulture.

Agricultural instruction in the future will, with increasing frequency, be offered in area vocational and technical schools serving several school districts. These schools will offer a variety of vocational subjects under the administration of a director of vocational education who will be responsible to a board of education composed of representatives from the member school districts.

Young farmer programs will also change. There will be more than one teacher of agriculture, each a specialist in one or more areas. Teaching young farmers will be regarded as a specialized task and will be assigned to one or more teachers as a major responsibility. The teacher will report to a director trained in vocational education, but not necessarily in agriculture. The school will provide instruction for young farmers in a larger geographical area. The teacher will be available at any time to give young farmers both individual and group instruction.

The Teacher is the Key to Success

As with all educational endeavors, a competent, well-trained, interested teacher is a must. The employment of such a person is the responsibility of the school administrator and the board of education. They should work to find an outstanding teacher.

The teacher must have demonstrated a sincere interest in, and capability for, working with adults. He must be well-trained in the subject matter areas and the methods of teaching adults. He must be able and willing to keep up to date by cooperating with other persons serving the needs of farmers and by taking advantage of in-service training programs.

Teachers of agriculture report that many of their greatest personal satisfactions result from their participation in the young farmer program. Teachers working with young farmers must be practical and focus their attention on real farm problems. In addition to winning the confidence and respect of farmers in the community, the teachers are often rewarded financially and professionally.

An Informed and Sympathetic School Administrator is Vital

To keep his school administrator informed and involved in the young farmer program, the teacher should issue periodic reports, use normal administrative channels when determining policy, invite the school administrator to participate in well-planned meetings of the advisory board and to observe the young farmer program in action, and involve the

school administrator in special events. Such activities are especially important when there is a change of school administrators.

If the teacher of agriculture wishes to introduce a young farmer program to the area, he should discuss its possibilities with the school administrator and supply complete information concerning the purpose and nature of the program. If the administrator feels the program is desirable, he will explain it to the board of education and discuss it with them, possibly inviting the teacher to assist in presenting the facts. If this group wishes to discover whether the program is needed in their community, the teacher of agriculture and the advisory board may be requested to make a survey to find out how many young farmers would be interested.

Locating and Interesting a Sufficient Number of Young Farmers

In the interest of efficiency, the teacher of agriculture should collect certain information about the young farmers in his school district(s) so that he can select those he should visit. The permanent record files of the school show who took courses in agriculture and give the date of birth, address when in school, and highest grade completed.

Marital status, present address, farming status and degree of need for the program can be obtained from the agriculture department's "Permanent Cumulative Record for Vocational Agriculture" and by interviewing people such as advisory board members, extension personnel, school people, high school agriculture students, rural organization leaders, feed store operators, and others who have lived in the area for a long time. Such persons should also be asked for information about young farmers who did not take agriculture in high school or who have moved in from other areas. Often the teacher himself will have a good knowledge of local people, but he will be wise not to limit his survey to his acquaintances.

When reliable data concerning the young farmers have been collected, the teacher and his advisory board should determine the criteria for selecting those to whom personal visits will be made. For example, it might be decided that the teacher should visit only those young farmers who live in the area of the school, are in the process of becoming established in farming, have a need for training, and constitute a fairly homogeneous group as far as age, marital status, previous education, or farming status are concerned.

The first contact with individual young farmers may be limited to 15 or 20 minutes. When he arrives at the farm, the teacher should introduce himself to the young farmer and inform him of the purpose of his visit. He should explain the program and its benefits, how it operates, and how instruction will be conducted. He should discover the young farmer's plans for the future and observe his farming operation in general. He should answer the young farmer's questions, find out if he is interested, and ask the names of other young farmers who might be interested. Before leaving the farm, the teacher should make it clear what action the young farmer can expect from him if plans are made to begin the program. During this visit the teacher will be wise to include the young farmer's wife or parents in the discussion.

When the teacher has completed his visits with the young farmers, he should report to the advisory board which should review the number of young farmers who are interested, the intended scope of the program, the adjustments needed in the teacher's schedule of responsibilities, and the cost and reimbursement estimates. The advisory board then gives this information to the board of education, along with a recommendation as to whether the young farmer program should become a part of the school's offering in agriculture. The final decision rests with the board of education.

Providing Teacher Time

While plans for the young farmer program are being made, the school administrator should review the teacher's responsibilities and determine the adjustments necessary to provide "teacher time" and fit the new program into the normal working day of the teacher. The teacher must be able to meet the young farmer class without straining his family relationships. He must not be expected to conduct the young farmer program as an overload activity. In fact, it is not advisable to allow him to do so even if he is willing.

In determining adjustments in the teacher's responsibilities, the administrator must realize the teacher should devote at least 10 hours of individual on-farm instruction per young farmer each year. Assuming that four hours per young farmer is spent during the summer, six hours per farmer (or 120 hours of on-farm instruction for a group of 20 young farmers) must be provided during the school day. This is equivalent to 180 forty-minute periods or one regularly scheduled school period per day throughout the school year. Because of the time required for travel, on-farm instruction must be scheduled at the end of the school day.

It is strongly recommended that the teacher's combined pupil load of secondary school students and young farmers be limited to 50. Even so, the teacher must work after school hours to provide the minimum amount of on-farm instruction.

Coordinating Efforts with Other Agencies

The teacher of agriculture must recognize the fact that organizations other than the school serve the educational needs of young farmers. The agricultural extension service, commercial companies, credit agencies, and soil conservationists among others are involved. If efforts are being made to coordinate the activities of these groups, the teacher should explain to them how his program will supplement existing efforts. Where no such attempts are underway, the teacher should call representatives of the interested agencies together to reach agreement on the contribution each can make and the coordination of efforts. The facilities of the agriculture department can be used as a center for programs serving young farmers.

DETERMINING NEEDS AND PLANNING INSTRUCTIONAL PROGRAMS

Instructional Needs and Their Importance

The needs of any individual can be classified as felt or as unfelt depending on his awareness of the gap between where he is and where he should be. When a young farmer becomes dissatisfied with the shortcomings of his farm business, he has a felt need. For example, if his dairy herd records show that his cows are producing an average of 10,000 pounds of milk per cow and he believes they should produce 15,000 pounds to return a reasonable profit, he feels a need to improve the level of production 5,000 pounds per cow. The teacher of agriculture can expect this young farmer to be interested in the problems which must be solved to fulfill his needs.

Conversely, when a young farmer does not recognize the shortcomings of his farm business, he has an unfelt need. For example, a young farmer who does not keep production records or who is unaware of appropriate standards of milk production is unlikely to feel a need for increasing the production of his herd. While taking a farm survey, the teacher of agriculture may divide the pounds of milk sold during a year by the number of cows and discover an approximate average milk production of only 8,000 pounds per cow. If the teacher is convinced that 10,000 pounds per cow is the minimum production that is economically feasible, he will recognize an unfelt need on the part of the young farmer to increase his milk production 2,000 pounds per cow. In this case the teacher must recognize that the young farmer is not aware of his need nor is he concerned about the problems which must be solved to fulfill this need.

Unfelt needs can be converted to felt needs by helping an individual to recognize his present situation, become familiar with appropriate standards, become aware of the difference between the two, and set appropriate goals. The young farmer must be helped in collecting accurate information about his farm business and in computing certain measures of the factors most closely related to success in farming. These include crop yields, animal production, size of business, labor efficiency and capital efficiency. He should compare this information with the standards achieved by successful farmers and take note of the weak spots in his farm business. Finally, he should receive help in setting goals which, when achieved, will strengthen his farm business.

For example, if the teacher of agriculture helps a young farmer compute his present milk production per cow and compare it with that of other successful New York dairy farmers, the young farmer may become convinced that he needs to raise his milk production by 2,000 pounds per cow. In that event, an unfelt need will have been converted to a felt need. Furthermore, the teacher of agriculture will note that this young farmer is interested in the problems which must be solved. A young farmer who is aware of a need may require assistance from the teacher in identifying the specific problems which must be solved to fulfill the need. A teacher of agriculture must convert unfelt needs into felt needs if he wishes to interest the young farmer in identifying and solving his problems.

If the young farmer already possesses the necessary knowledge, skills, attitudes, and understandings, he can go ahead on his own to identify and solve the problems that will enable him to fulfill his needs. On the other hand, if a young farmer does not have the effective abilities necessary to identify and solve his problems, he needs instruction. For example, the young farmer who feels the need to increase milk production per cow by 5,000 pounds may be able, with the teacher's help, to identify such problems as improving the feeding of dairy cows during the barn feeding period, improving the quality of roughage to be fed, planning the breeding program for the dairy herd, and preventing and controlling mastitis. If the young farmer does not already possess the knowledge, skills, understandings, and attitudes to solve these problems, the teacher and the young farmer have identified four of his instructional needs. This concept is illustrated by the diagram in Figure 1.

The teacher of agriculture is an educational specialist. As a teacher of young farmers, it is his obligation to give systematic instruction. If the young farmer program is to realize its potential for improving the lives of young farmers, this instruction must be primarily concerned with those instructional needs of

Figure 1. A Concept of Instructional Needs

What Should Be (Goal) = 15,000 lbs of milk/cow
What Is (Situation) = 10,000 lbs of milk/cow
} Gap (Felt Need) = 5000 lbs/cow

⇩

Instructional Needs

(Problems which the young farmer needs help in solving)

1. Improving the feeding of dairy cows during the barn feeding period.
2. Improving the quality of roughage to be fed.
3. Planning the breeding program for the dairy herd.
4. Preventing and controlling mastitis.

young farmers which, when fulfilled, will most directly influence success in farming; this includes the areas of crop yields, animal production, poultry mortality, size of business, labor efficiency, and capital efficiency.

Determining the instructional needs of young farmers is the essential first step in systematic instruction. Because instructional needs are complex and young farmers frequently lack insight concerning their own needs, the teacher must be well informed about each young farmer's situation and goals (or absence of goals) before he attempts to help him identify his instructional needs. One process by which the teacher and the young farmer achieve this is by taking a farm business survey.

Obtaining a First Impression of Instructional Needs

Arrangements to take a farm business survey should be made in advance with the young farmer so that he will be free from other duties and responsibilities. Between one and two hours should be planned for taking the survey.

When he arrives at the farm, the teacher should be sure the young farmer understands the purpose of the survey—"to find out what we can do that will help you the most" — and that it is to be a joint undertaking. He should then walk the farm with the young farmer. This gives the young farmer a chance to show the teacher his farming operation and gives the teacher an opportunity to see the livestock, crops, buildings, and equipment. As they go about the farm, the teacher should ask questions about the young farmer's situation, plans, and problems. He should take mental notes.

After walking the farm, the young farmer and the teacher should fill out the survey forms together in an atmosphere relatively free of distractions. The following information should be summarized:

1. A farm business analysis including data concerning such factors as size of business, labor efficiency, animal production, crop yields, and mortality rates (Figure 2). It is important to use objective information from such sources as D.H.I. records; farm account books; bale counts; S.C.S. maps; silo, hay and grain tables; and milk plant weight slips rather than guesses the young farmer might be tempted to make.
2. A record of selected approved practices being used on the farm (Figure 3).
3. The farm improvements and approved practices planned for the year ahead (Figure 3).
4. A list of farm problems or instructional needs which are most vital to the young farmer's success.

Before leaving the farm, the teacher should explain that the problems discovered will be kept confidential and summarized with those of other young farmers to help determine the instructional phase of the young farmer program. If the program is new, he should also discuss a convenient time for the first group meeting.

Summarizing Instructional Needs

When the teacher has completed the survey procedure with every young farmer, he summarizes their instructional needs or farm problems. This can be readily accomplished using a chart such as the one in

Figure 2. Farm Business Chart

FARM OF _____ YEAR _____

TOTAL ACRES IN THE FARM _____ ACRES OF TILLABLE LAND _____

Success in farming is the result of many factors. Farm business studies show that the most important factors under the farmer's control are size of business, production rates of crops and animals, labor efficiency and selection and combination of enterprises.

The chart below shows the range of the experience of commercial farmers in New York with respect to size of business, production rates and labor efficiency.

The figure at the top of each column is the median of the highest ten per cent of the farms in that factor. For example, the figure 3.8 at the top of the column headed "Tons of Hay" is the median of the ten per cent of the farms with the highest yield of hay. The other figures in the column are the medians for "the next best 10 per cent," "the 10 per cent below that," and so forth. The figure 1.2 at the bottom of the column is the median of the ten per cent of the farms with the lowest yield of hay.

Each of the columns is independent of the others. The figure 18 at the top of the column headed "Tons of Corn Silage" is the median of the ten per cent of the farms with the highest yield of corn silage.

Hay, Silage, Grain Yields per Acre					Vegetable Yields per Acre								Fruit Yields per Acre

HOW TO USE THIS CHART

Draw lines in each column to show the rank of the farm business being studied. For example, if the farm produced 57 bushels of oats per acre draw a line in the "oats" column between the 56 and 60.

Draw heavy lines so that you can see them easily.

Do not draw lines for factors which are of only minor importance on the farm being studied.

PREPARED BY S. W WARREN, DEPARTMENT OF AGRICULTURAL ECONOMICS, NEW YORK STATE COLLEGE OF AGRICULTURE, ITHACA, NEW YORK, FEBRUARY, 1966

Name.....

Mailing Address.....

Date of Birth.....Highest Grade Completed.....

Farming Status.....Marital Status.....

Military Status.....Number of Children.....

Completed New York Farm Business Chart (circle one) Yes No

Check (√) practices followed in list below

Dairy

.....Production record program (DHIA, OS, other).
.....Breeding records (breeding, calving, heat expectancy).
.....Herd health records.
.....Cows bred first heat period, 70 days after calving.
.....Artificial insemination, (high AI Proven Sires).
.....Veterinarian examines cows for pregnancy.
.....Heifers proper size for age of calving, (24–27 mo. of age).
.....All cows have 50–60 day dry period.
.....Cows freshen in good condition.
.....Calving pen used.
.....Annual herd turnover below 20 percent.
.....Isolate purchased cows temporarily.
.....Feed colostrum to calves.
.....Use antibiotics in feeding calves.
.....Provide special grain mixture for calves.
.....Grain fed according to revised feeding guides (constant ratio not acceptable).
.....Supplements pasture with hay, silage or green chop (6–15 – 10–15).
.....Water supply adequate.
.....Wash udder and stimulate let-down ½ – 1 minute before applying milker.
.....Remove machines as soon as cow is milked out.
.....Bulk tank used.
.....Mechanical ventilation.
.....Barn laid out for "easy work."
.....Stalls at least 43″ wide and 64″ long.
.....Adequate bedding.

Crops

.....Tests soil.
.....Limes according to recommendations.
.....Cooperates in SCS program.
.....Use treated, hybrid corn and certified oat seed.
.....Up-to-date varieties.
.....Band seeding.
.....High analysis fertilizers applied so not in contact with seed.
.....Use chemicals to control weeds.
.....Planned crop rotation.
.....Contour strip cropping on soils likely to wash.
.....Row crops on land with slight slope.
.....Sod crops on land with greater slope.
.....Critical spots artificially drained.
.....Rotates pastures with "big bite" species.
.....Clips permanent pastures.
.....Applies lime and fertilizer on permanent pasture.
.....Studies success of new hybrid corn varieties in neighborhood.
.....Silage variety with high grain content.
.....Move date of corn planting ahead moderately.
.....Corn borer control.
.....Start harvest of silage corn in glazed stage.
.....Finishes first cutting of hay by June 25.
.....Winter killing of forage species not a serious problem.
.....Use of sorghum sudan crosses for supplementing pasture.
.....Use hay crusher or crimper.

Figure 3. Young Farmer Survey Form (continued)

Farm Business Management

.....Maintain a farm office with files and reference materials.

.....Set aside time regularly for management

.....Take an annual inventory.

.....Keep cash account records.

.....Maintain production records.

.....Keep a field and crop record.

.....Have a map of home farm.

.....Use a soil map in analyzing farm business.

.....Analyze and study farm records each year.

.....Prepare and use financial statement.

.....Keep informed on farm prices and farming outlook.

.....Budget alternatives when making major decision.

.....Keep a record of all real estate capital improvements for tax purposes when sold later.

.....Have an inventory of "Your Valuable Papers."

.....Make a will to cover farm and personal matters.

.....Provide sufficient operating capital to take advantage of discounts, sales, etc.

.....Keep debts consolidated and review debt situation annually.

.....Pay all major bills by check.

.....Review insurance program periodically.

.....File tax returns, check stubs, and other important papers for possible future use.

Machinery and Buildings

.....P.T.O.'s protected.

.....Machines stored under cover.

.....Machines properly winterized.

.....Home farm shop.

.....Fire extinguisher in barn.

Overall farm

What can we do in the young farmer program that will help this young farmer most?

Figure 4. The chart will have more meaning for the teacher if he differentiates between felt instructional needs and unfelt instructional needs. The teacher can expect considerable diversity in the instructional needs of young farmers.

Using the completed chart, the teacher next makes a list of the five or six farm problems which the largest number of young farmers have identified, placing heavy emphasis on farm business management. On the premise that one purpose of his teaching will be to convert unfelt needs to felt needs, he may also wish to include in his list a few problems relating directly to success in farming which are common to the group but for which only a few young farmers feel a need for instruction. However, he should not be surprised if the young farmers reject these.

Felt instructional needs peculiar to individual situations should be reserved for on-farm instruction.

Typical Instructional Needs

Hill et. al.[1], using a procedure similar to that described above, found the most common instructional needs of 223 beginning New York dairy farmers to be:

1. Farm Business Management: Knowing laws and other legal aspects affecting farm business, interpreting governmental programs, knowing the available government services, increasing efficiency, buying the right type and amount of insurance, keeping records and reporting income tax and social security, planning agreements for renting or buying additional land, planning credit needs, analyzing the farm business, and marketing farm products.

2. Dairy Husbandry: Isolating purchased cows temporarily, using antibiotics in feeding calves, using a calving pen, using a bulk tank, finding ways to increase milk production, maintaining herd health, selecting feed rations, and selecting bulls that will increase milk production.

3. Crop Production: Using contour strip cropping, using band seeding, top dressing pastures with commercial fertilizers, clipping permanent pastures, increasing soil productivity, selecting the proper fertilizer, selecting the best yielding seed variety, controlling weeds, controlling diseases and insects, and increasing pasture yields.

4. Farm Mechanics: Using electrical power on the farm, constructing and repairing farm buildings, providing facilities for housing and milking, and determining size of power machinery and equipment.

Figure 4. Problem Summary Sheet

Farm Problems	Class Members										
											Total

√ = A felt instructional need.
X = An unfelt instructional need.

Making Arrangements for the First Meeting

The teacher should set the date for the first meeting at the convenience of the young farmers. One suggested procedure is to send out a letter to each of the young farmers at least two weeks in advance, announcing the date and hour, the meeting place, and the agenda. This is followed by a postcard reminder three or four days in advance of the meeting.

At the first meeting the teacher should strive for informality. It is usually advisable to arrange tables in a conference-type setting to allow the teacher to sit with the group. The teacher should plan to dress neatly but informally.

Before the meeting, the teacher should provide an opportunity for one or more of the natural leaders in the group to become well informed about local young farmer associations. This might be achieved by giving them appropriate written materials, having them visit another young farmer association, or by some other means.

Conducting the First Meeting

Although the school administrator will probably not be able to attend many meetings of the group, it is most appropriate that he welcome the young farmers to the school on behalf of the board of education.

The instructional program should always be planned jointly by the teacher and the young farmers with the latter making the final decisions. The teacher may remind the group of the farm business surveys previously made with each of them, describe the process he has used in summarizing the results, explain why he has placed emphasis on farm business management, and present the list of five or six problems for which the largest number of young farmers have indicated a need for instruction. He should then encourage the group to made additions to, and deletions from, the list which he has presented. Primary emphasis should

always be placed on farm business management rather than on production.

When the group has agreed on the problems to be included in the program, they should decide the number and frequency of meetings. The teacher should encourage the group to schedule at least one meeting each month with additional meetings during slack work periods. The group should then schedule specific dates for each farm problem, taking into consideration such factors as logical sequence, seasonality, number of meetings needed to solve each problem, and the urgency of each. Since the teacher is to be in charge of instruction, the group should not be encouraged to establish specific plans for the instruction to be given.

When the instructional program has been organized, the group should discuss plans for a local young farmer association. Since the teacher's role in this connection is to be advisory, he should call on a well-informed member of the group to present information and lead the discussion. The teacher should encourage the group to take steps to gather all the facts before any decision is made and allow them to proceed at their own pace. They may wish to invite a leader from another young farmer association to the next meeting to describe his group's activities, to send a delegation to visit a meeting of such a group, or to obtain further information by some other means. Or, if complete information is already available and the group so desires, they may wish to elect temporary officers, select a name, and discuss other details of organization which will be included in an informal constitution. Above all, the teacher should maintain his stance as an advisor throughout the discussion and allow the leadership within the group to function.

The meeting should usually be concluded by the end of the second hour. Refreshments may be served while the meeting is in session or afterwards depending on time.

If the teacher has made careful preparations, the group should emerge from the first meeting with an instructional program strongly oriented toward farm business management, a high degree of interest in forming a local young farmer association, and the impression that their needs and interests will be well served by the program.

CONDUCTING GROUP INSTRUCTION

Young Farmers as Learners

1. Motivation and ability to learn. Compared to older, more established farmers, young farmers are more interested in changing farm techniques and in introducing the changes into their own operations; more interested in monetary gain than such traditional rural values as freedom from debt and self-sufficiency; less inclined to value farming and rural residence as the most desirable pattern of working and living; and more inclined to seek the freedom and diversity of the urban pattern of association rather than primary contacts with family and neighbors.[3]

As adults between the ages of 18 and 40, young farmers are at the prime of life in terms of the rate at which they learn. The teacher of agriculture can expect his young farmers to excel in judgment and reasoning, ability to solve problems, and creative imagination. On the other hand, he should recognize that, compared to high school students, adults tend to have poorer perception and be less capable in reading ability and memorization.

2. Where do young farmers get their information? The findings of Hill et. al.[1] indicate that young farmers in New York State are accustomed to using many sources of agricultural information. The young farmers included in the sample reported they regularly read an average of six farm publications. More than half the young farmers reported they regularly read *Farm Journal, American Agriculturist, Hoard's Dairyman, N.Y.A.B.C. Co-operator, Successful Farming,* and *G.L.F. News.*

Radio is a more common source of agricultural information than television. More young farmers reported listening to agricultural radio programs in the morning (67 percent) than afternoon (19 percent) or evening (30 percent). Those young farmers who use television as a source of agricultural information are more apt to view programs in the afternoon (21 percent) than in the morning (5 percent) or in the evening (5 percent).

The young farmers reported they sought counsel regarding various aspects of their farm businesses an average of 12 times per year. Those from whom such counsel was sought were, in descending order, feed dealers, agricultural extension agents, fertilizer dealers, seed dealers, Soil Conservation Service, commercial banks, agricultural teachers, farmers' cooperatives, and the Farm and Home Administration.

Membership in the following farm organizations was reported by the young farmers: Extension Service (86 percent), farm cooperatives (69 percent), milk marketing agencies (67 percent), Soil Conservation Service (67 percent), Farm Bureau (52 percent), young farmer classes (36 percent), Grange (22 percent), and youth organizations (11 percent). The percentage of members attending meetings of the organizations to which they belonged was highest for those belonging

to young farmer classes, followed in descending order by milk marketing associations, farm cooperatives, Farm Bureau, Extension Service, Grange, and Soil Conservation Service.

3. Learning activities preferred by young farmers. Hill et. al.[1] also asked each young farmer to select, from a list of 15, the 5 educational activities he preferred for obtaining information about farming. The percentage of young farmers who included each of the 15 activities in his list was: going on tours (66), observing demonstrations (62), instruction on the farm (57), reading farm magazines (57), reading farm bulletins (48), small group discussions (45), listening to talks (42), practice in doing jobs (41), observing movies and slides (22), reading newsletters (15), listening to the radio (14), panel discussions (11), watching television (8), large group discussions (7), and reading newspapers (5).

Planning for Group Instruction

Thorough preparation is a must for the teacher of young farmer classes. The young farmers must "get something" out of each class session if attendance is to remain high. The teacher must keep in mind that young farmers attend classes voluntarily. The program of instruction is based on important farm business management concerns recognized as instructional needs. The secret of keeping attendance high lies in thorough preparation and the proper use of appropriate teaching techniques. In preparing a teaching plan, the teacher should follow certain definite steps.

1. State the problem to be solved. The teacher must identify the problems and select those that can be solved in two or three meetings. It is better to divide complex problems into smaller ones before attempting to develop a teaching plan. Instruction may be needed in connection with only a part of a complex problem; if so, the statement of the problem can be restricted. Problems should be stated in words that young farmers understand and use.

2. Become oriented to the teaching situation. Teaching of young farmers is more effective when it is planned and carried out in terms of specific situations. In preparing for teaching, the teacher will need to recall such aspects of the problem's setting as the importance of the problem to class members, the number of young farmers faced with the problem, and the exact circumstances in which the problem exists.

The teacher must also consider the young farmers' attitudes and abilities and the availability of facilities, instructional materials, and other resources which may be needed to solve a problem.

3. Determine teaching objectives. Teaching objectives are the changes in people the teacher hopes to bring about as a result of his teaching.

The teacher's task is to change the behavior of his young farmers so they will be able to solve their own problems and "stand on their own feet." To do this, he must develop in them new skills and abilities, new attitudes and interests, and new understandings. The phrase "to develop an effective ability," is often used in stating teaching objectives since the student must gain not only a skill, but also a favorable attitude toward using the skill and an understanding of what is involved when he performs it.

Well written teaching objectives[4] often include the specific behaviors the teacher seeks to develop, the conditions under which the teacher expects the learner to evidence such behaviors, and evaluation criteria.

When stating specific behaviors, the teacher should use words open to few interpretations.

Words open to many interpretations	*Words open to fewer interpretations*
to know	to list
to understand	to identify
to appreciate	to solve

In stating "conditions" it is often helpful to make specific reference to such qualifiers as *given a list of, without the aid of tools, without the aid of, given a standard set of tools.*

The criteria to be used by the teacher in evaluating achievement of his teaching objectives often involve such matters as time limits, total number (how many), percent or proportion.

4. Analyze the problem. The analysis is the content or "what" of the problem. It is a device for organizing the subject matter for teaching. The teacher is guided in making his analysis by his orientation to the situation and by his teaching objectives. Since planning for teaching is a developmental process, he may wish to re-examine and revise his teaching objectives after he has completed his analysis.

Many problems are of a managerial nature and require the young farmer to make a series of decisions. In analyzing this type of problem, teachers may state a number of "decisions to be made" and list the "factors to be considered" in making each decision.

Certain rules are helpful in stating "decisions to be made."

1. State each "decision" in question form.
2. Use good English.

3. Include only those "decisions" which deal with a critical aspect of the problem.

4. Identify the logical alternatives available to the young farmer in connection with each decision. For example, solving the question "Where will I buy my alfalfa seed?" the alternatives are Dealer A, Dealer B, etc. Reject those questions for which logical alternatives are not identifiable.

5. Avoid multiple decisions. For example, the question "How will I manage my calf?" actually involves several decisions, each requiring the consideration of different factors.

6. Avoid restating the job title to form a single decision. Taking this easy way out obviously avoids the breaking of the problem into parts which is the purpose of analysis.

7. Avoid lethal decisions, questions with yes or no alternatives which block further consideration of the problem.

8. Restrict the number of decisions to four or five.

"Factors to be considered" are the criteria for deciding which course of action is to be pursued by the young farmer. Several rules should be followed in selecting and stating them.

1. Select only those factors which provide a logical basis for choosing between the alternatives.

2. Avoid outlining.

3. State each factor in as few words as possible.

4. Restrict the number of factors to four or five.

5. Select only those factors that are critical in making the decision.

A second type of problem commonly encountered in teaching young farmers is one which can be solved by applying a well-defined and commonly accepted set of operations or procedures. The analysis of such a problem may take the form of a list of "steps in doing the job" either in demonstrating the problem solution or solving the problem in a real-life situation.

A third type of problem springs from the young farmers' need for information about a new government program or a technological development which may concern his farming operation. The analysis can be a list of questions which will be answered in the course of instruction.

5. Select teaching procedures and materials. The teacher now must decide how he will go about solving the problem with the group — what teaching techniques are to be used and who is to give each phase of the instruction. In selecting the techniques, the teacher must keep in mind which of the three types of problems he is attempting to solve.

a. Managerial problems. The teacher's basic responsibility with these problems is to select teaching procedures which will enable the students to pinpoint the difficulties to be solved (decisions to be made) and the setting in which these difficulties exist, discover the logical alternatives for solving each difficulty, explore or predict the outcomes that can be expected if each alternative is pursued, choose the alternative that provides the "best fit" for their situation, and plan procedures for implementing the chosen solution on their farms.

b. Operational or procedural problems. These are characterized by a single solution that has broad application in most farming situations. The difficulty arises from the fact that although the young farmer recognizes the solution, he does not know how to implement it.

This type of problem can be efficiently solved by familiarizing the young farmer with the tools, equipment, and supplies necessary for doing the job, demonstrating the performance of each operation in sequence, and supervising the practice of the young farmers as they do the job themselves. This sequence of teaching procedures has proved particularly effective in problem areas involving mechanical skills.

c. Informational problems. In solving these problems the teacher should use teaching procedures which will place the young farmers in direct contact with appropriate and acceptable sources of information, provide valid answers which the young farmers understand, and present the needed information in a satisfying manner.

Regardless of the type of problem, the teacher should use teaching techniques known to be effective with young farmers. These include general discussion, field trips and tours, demonstrations, practice under supervision, the use of consultants, audio-visual aids, and teacher explanations. By the same token, he should avoid distasteful procedures such as supervised study, written tests, recitation, and long-winded lectures.

By and large, the young farmers will judge the merits of the young farmer program on the basis of the instruction. The intelligent teacher will be sure he provides both substance and variety.

The teaching plans which follow illustrate many of the suggestions made above.

Sample Teaching Plan for a Managerial Problem

Problem: Selecting and purchasing a bulk tank for Pete's farm.

Teaching Objectives: To develop an effective ability:

1. To select the proper size of bulk tank for different dairy farms.
2. To select the most appropriate type of bulk tank for specific situations.
3. To decide the best place to buy a bulk tank which meets the necessary specifications.

Analysis

Decisions	Factors	Teaching Procedures
		First Meeting (2 Hours)
		1. Introduce discussion by reviewing how and why the problem was chosen for group consideration.
		2. With the teacher serving as discussion leader, break the problem into decisions to be made and factors to be considered.
1. What size bulk tank does Pete need?	1. Amount of milk produced.	3. Have Pete supply the information needed on present and future volume of milk to be cooled.
	2. Future volume of milk.	
	3. Space available.	4. Present enlarged diagram showing present dimensions and layout of milkhouse.
	4. Space needed.	5. Use flip chart for various size tanks showing: a. space required between tank and wall b. space needed for cleaning tank and surrounding area c. amount of space needed for tank d. amount of space needed for work area in milkhouse
		6. Chart tentative new layout and compare with space available.
		7. Have the group weigh the relative merits of the two closest sizes which meet Pete's minimum needs and make a tentative group recommendation.
		Second Meeting (2 hours)
2. What type of bulk tank should Pete select?	1. Method of refrigeration. 2. Electric power requirements. 3. Initial cost. 4. Operating cost. 5. Convenience.	1. Field trip to two local dealers to see the alternative types of tanks and collect the information needed about each factor to be considered in deciding the type of bulk tank Pete should select and where he should buy it. Record information on field trip data sheet provided by teacher.
		Third Meeting (2 hours)
		1. With the teacher as discussion leader, review the alternative types of tanks observed on field trip and the information obtained on each and arrive at a group recommendation concerning the type of tank Pete should select.
3. Where should Pete purchase the bulk tank?	1. Cost. 2. Delivery and installation service. 3. Service available from dealer.	2. Using the same procedure, weigh the information concerning each factor to be considered in deciding where to purchase the tank and arrive at a group recommendation.

Sample Teaching Plan for an Operational or Procedural Problem

Problem: Servicing the tractor cooling system.

Teaching Objectives: To develop an effective ability to perform the following operations under farm conditions:

1. Check and determine the cause of leaks in the cooling system.
2. Check the fan belt for tension and wearing and correct to specifications.
3. Flush the cooling system using recommended procedures.
4. Replace coolant following instructions in operator's manual.

Analysis

Steps in Doing the Job	Teaching Procedures
1. Check the level of coolant in the radiator while the engine is cold.	1. (a) Remove cap, check for rust, scum, and proper level. (b) If coolant appears clean, proceed with steps 2, 3, and 4. (c) If rust or scum appear in coolant, proceed with steps 2 to 9.
2. Remove trash from grill and radiator.	2. (a) Demonstrate how to clean using forced air and water. (b) Clean from behind radiator, forcing trash out through front. *Caution*: Excess pressure may damage radiator core.
3. Check for leaks in hoses, clamps, and water pump.	3. (a) Demonstrate how to check old hoses. (b) Show how a small pinhole is a major leak in the cooling system. (c) Show cutaway section of old hose worn with use. (d) Demonstrate the use of liquid or other type hose sealer. (e) Check water pump for leaks. (f) If leaks are found refer to *Operator's Manual* for corrective procedure.
4. Check tension of fan belt.	4. (a) Demonstrate how to check fan belt for tension and wear. (b) Refer to *Operator's Manual* for recommended slack and replacement procedures.
5. Check thermostat if used.	5. Demonstrate how a thermostat works.
6. Flush the radiator.	6. (a) Demonstrate *safe* way to remove cap from hot radiator. (b) Demonstrate how to use cleaning solution. (c) Consult *Job Operation Sheet A-18* or *Operator's Manual.*
7. Refill radiator with proper anti-freeze solution or soft water.	7. (a) Explain how anti-freeze works. (b) Justify selection of coolant under conditions which will exist in use. (c) If soft water is used, add rust inhibiter. (d) Check *Operator's Manual* for amount of anti-freeze needed under different weather conditions.
8. Recheck for leaks.	8. (a) Check under operating conditions for leaks in hoses, water pump, etc. (b) Explain difference between sealed and non-sealed water pumps. (c) Check *Operator's Manual* for greasing.
9. Check freezing point of coolant.	9. (a) Explain how the hydrometer works. (b) Demonstrate to check freezing point of coolant.
	10. Have young farmers perform the job in small groups and give individual instruction as needed.

Teaching Materials

1. *Operator's Manual*
2. *Job Operation Sheet A-18*
3. Hydrometer
4. Old radiator hose
5. New permanent anti-freeze
6. Alcohol type anti-freeze
7. Thermostat (if used)

Sample Teaching Plan for an Informational Problem

Problem: Using the Agricultural Conservation Program.

Teaching Objectives: To develop an effective ability:

1. To refer accurately to the agencies and personnel responsible for soil conservation programs in the county.
2. To list on request the A. C. P. programs available in the county.
3. To compute the extent of government cost-sharing for each conservation practice.
4. To complete correctly, without assistance, the application forms for A. C. P. cost-sharing.
5. To qualify for approval of accepted practices.

Analysis

Questions to be Answered	Teaching Procedures
1. What is the current status with respect to (a) individual participation? (b) attitude toward Federal Cost-sharing Conservation Programs?	1. Motivate interest in the subject area by using a series of short-answer questions. Make questions practical but sufficiently difficult to establish a felt need for information. For example: (a) What does A. C. P. mean? (b) What does A. S. C. S. mean? (c) In which, if any, of the following cost-sharing programs have you participated? (List those available in county.) (d) Where is the county A. S. C. S. office located? (e) Who is the county A. S. C. S. manager? (f) Did you vote in the community committee election this year? (g) Have you ever served as a community committeeman? Ask young farmers to complete the questionnaire at the meeting preceding the one in which the Agricultural Conservation Program Unit is to be discussed. Begin the A. C. P. session with a report of results of the questionnaire. Use the New York State Annual Summary and the A. C. P. County Handbook for sources of information.
2. What is the Agricultural Conservation Program and how is it administered?	2. Using the Annual Summary as a reference, prepare a chart or overhead transparency showing the various A. S. C. S. programs. Use information on page 3 of the Summary for a brief explanation of the method of administration. Stress the responsibilities of local committeemen, method of election, who votes, etc. 3. Arrange for the county A. S. C. S. manager to visit the class and outline the program. 4. Arrange to visit the farm of one of the class members who has made extensive use of conservation services. Plan to have the A. S. C. S. manager in attendance to discuss short- and long-range programs for the farm.
3. What services are available to farmers?	5. Provide each student with a current copy of the County A. C. P. Handbook. Discuss the purpose and application specifications of each of the practices in which the men are interested.
4. How can A. C. P. services be obtained?	6. Ask a local committeeman or the A. S. C. S. manager to bring a Request for A. C. P. Cost-Sharing form for each member of the class. Explain how the application is completed and committee procedure for approving all or part of the request.
5. What are the farmers' responsibilities in carrying out the approved practices?	7. The A. S. C. S. manager or committeeman should explain differences in practice with respect to length of time for completion, as well as penalties for failure to comply. (See pp. 7–8, New York A. C. P. Handbook.) 8. Using Request for A. C. P. Cost-Sharing, work out a request for the farm of one of the class members.
6. To what extent does the federal government share in costs for carrying out conservation practices? (a) Allocation procedures for state and county funds (b) Method of time and payment (c) Limitations (d) Reallocation of funds	9. Make an estimate of the government share of the cost based on information in the County Handbook.

Teaching Young Farmers in Groups

The role of the teacher in the instructional phase of the young farmer program is that of a democratic leader. The young farmers expect him to take charge of the instruction program and to manipulate events and persons so learning takes place and problems are solved.

Group instruction provides an opportunity for young farmers to share experiences and to pick up new ideas from many sources. The teacher's job is to devise situations which will broaden the young farmers' understanding of their alternatives and enable them to make intelligent decisions, allow them to perform operations of which they have previously been incapable, and give them knowledge and information which they did not previously have. The teacher must recognize that it is not his function to supply ready-made solutions to managerial problems or to make decisions for young farmers. He is, after all, a teacher and not a farm manager.

Young farmers can assist the teacher in conducting group instruction by giving special reports, participating freely in general discussion, giving demonstrations, planning and conducting field trips to their farms, participating in panel discussions, and helping to secure the services of local specialists. The teacher should use the talents of his young farmers whenever possible. Young farmers enjoy the opportunity to lead. The wise teacher will seek ways to give each young farmer his turn in a role consistent with his capabilities.

A wide range of problems are considered by a young farmer class during a year. Because of the limitations of the teacher and his young farmers in specialized technical fields, it is often desirable to invite outside resource people to participate in young farmer classes. Whenever this is done, the resource person should act as a consultant, and the teacher should continue to serve as the leader. Whenever the group needs technical information, they turn to the resource person who then responds informally. The consultant thus limits his contribution to his field of specialization; maintains the group's frame of reference, namely, the problem under consideration; speaks to the setting in which the problem is being discussed; and makes no formal speeches.

When such a resource person is invited to participate in a meeting, the teacher should describe the nature of the problem to be discussed, fill him in on the setting of the problem, indicate the sorts of technical advice which may be called for, explain the role he is to play, and request that no speech be prepared or given. If the person represents a commercial concern, the teacher should make the position of the school clear with relation to commercial advertising. Used in this manner, outside resource people can make a unique contribution in helping the young farmers solve their farm problems. In no event should the teacher of agriculture serve as a booking agent who "lines-up" talks by various resource people on topics of interest to young farmers.

Getting Started in Teaching Farm Business Management

Farm business management has been defined as "the ability to organize and operate a farm business to provide high continuous profits consistent with family welfare."[5] It includes keeping records for the purpose of obtaining accurate information, analyzing records to place the information in usable form, and interpreting records so decisions can be made and the operation improved.[6]

Despite the importance of farm business management, many teachers have had difficulty providing effective teaching and leadership in this area. Some teachers have trouble motivating class members or find farm business management hard to teach. Cost studies and usable information applicable to local situations are not always available, and good teaching outlines are hard to find.[7]

The teacher who sees the need for greater emphasis on farm business management in his young farmer program but who finds himself facing such difficulties needs to take certain remedial steps. It is suggested[8] that he:

1. Find out all he can about farm business management and how to teach it to interested learners. New York teachers have ready access to a wealth of information on all phases of farm business management through the Department of Agricultural Economics of the New York State College of Agriculture at Cornell University. Its services include a wide range of publications on various facets of farm business management, reports of farm management studies conducted in New York, local farm record clubs conducted jointly with agricultural extension personnel, farm business management schools conducted by extension specialists, opportunity for personal conferences with department specialists, and summer session and extramural courses especially for teachers of agriculture. In addition, the personnel of this department have worked closely over the years with members of the Agricultural Education Division in developing instructional materials for use by teachers of agriculture. The materials are readily available from the *Instructional Materials Service, Agricultural Education Division, Education Department, New York State College of Agriculture, Cornell University, Ithaca, New York.*

2. Evaluate his efforts to present farm business management instruction and make needed revisions in content and procedures. Some of the questions to examine are:

a. Is the study of farm business management a sensible activity to emphasize in this community?

b. What emphasis should be placed on each phase of such work with in-school students and young farmers?

c. What problem-solving procedures are necessary for developing a superior farm business management program for local young farmers?

3. Acquire beginning practical experience with farm business management. Although the teacher could obtain this experience in other ways, he might select one or more laboratory farms as instructional stations where the managerial problems and the farmer himself will offer a working example. The farm family (or families) selected must understand the role the teacher plans to have them play. They must be willing to share information about their business with others, be interested in making improvements in the business management of their farm, and have a positive relationship with the teacher based on mutual respect and permitting freedom of discussion. Given these conditions, the teacher helps the farm family (or families) set up and keep accounts. At the end of the first year he assists the farmer in organizing and interpreting the facts about the business by making a farm business analysis. In this way, the farmer's problems and alternatives are identified, and a plan for making the best use of the farmer's resources can be developed.

4. Establish farm business management as the core of his instructional program. Once the laboratory farm is well on its way to improved management, the teacher can use it in developing interest in record keeping on the part of the other young farmers and as an important resource in teaching farm business management. With the majority of the young farmers engaged in record keeping, analysis of records, interpretation of records, and development of plans for improving their businesses, the teacher will find the group receptive to the teaching of the basic farm management principles needed in solving their problems.

GIVING INDIVIDUAL ON-FARM INSTRUCTION

Should the instructional phase of the young farmer program end with group instruction, the problem-solving process will have been interrupted at the midpoint, and roughly one-half of the potential of systematic instruction will have been realized. The young farmers and the teacher of agriculture will have identified numerous farm business management concerns faced by the class members and will, as a group, have considered alternative solutions. Each young farmer still must decide on the solution to the problem that best fits his situation and put it into action on his farm. The teacher of agriculture can be an effective agent in assisting the young farmer to implement his new learnings in his own situation. The logical setting for conducting instruction of this sort is on the farm with the individual young farmer.

Purposes for Giving Individual On-Farm Instruction

1. To follow up on group instruction. Viewed in the context of managerial problem solving, group instruction is properly concerned with breaking a problem into manageable, logical components; identifying alternative solutions; and exploring these alternatives so a wise choice can be made among them. Group instruction as applied to an operational problem, at best, provides the young farmer with an opportunity to solve the problem under classroom conditions. In the case of an informational problem, group instruction leaves the young farmer with facts of a general nature.

On-farm instruction provides the teacher and the young farmer with an opportunity to complete the process of systematic instruction and to solve the problem in its setting. It is the keystone of the arch of problem solving.

2. To help young farmers solve individual problems. Whenever the instructional needs of any group of young farmers are summarized, a wide range of problems can be anticipated. If group instruction is designed to meet those instructional needs common to the greatest number of young farmers, a host of individual needs peculiar to a smaller number of young farmers will remain. The only logical way to deal with many of these problems is on an individual basis during on-farm instruction. By helping solve problems in this manner, the teacher can provide maximum assistance to individuals without distracting the other members of the group from their primary concerns.

3. To assist young farmers in determining their instructional needs. One of the most challenging aspects of young farmer instruction lies in the area of converting unfelt needs to felt needs, particularly in the critical area of farm business management. Since individual on-farm instruction is, by definition, focused on the young farmer's situation and the pursuit of his farm business goals, it provides an optimum setting for developing an awareness of instructional needs.

As the young farmer solves problems, his awareness of his needs and the nature of his needs undergo

changes; therefore, the identification of instructional needs must be a continuous process. What has been suggested concerning instructional needs indicated how the teacher of agriculture can "get his foot in the door." The success of the young farmer program requires that this beginning be followed by the solution of the initial farm business management problems and by constant adjustment of the instructional program to include new problems as they arise or are recognized. Thus the determination of instructional needs must be a facet of every individual on-farm instruction session.

Teacher Preparation

The teacher will find it useful to keep a list of the instructional needs of each young farmer. From time to time the teacher will add to this list as new needs are recognized and as the need for follow-up results from group instruction. The teacher must assign priorities to the various instructional needs to be satisfied by individual on-farm instruction. Such factors as importance in farm business management, urgency, seasonality, readiness, and logical sequence should be considered in determining such a rank.

The teacher usually makes specific appointments with his young farmers for on-farm instruction. The appointment is set at least a week in advance for a specific time and purpose. The young farmer is informed of the preparation he must make for the visit.

As appointments are made, the teacher should make a schedule of on-farm instruction commitments for the week ahead. A copy of this schedule is normally given to the school administrator, to whom the teacher reports his activities, well in advance.

In preparing for on-farm instruction, the teacher first reviews his record of the previous visit with the young farmer. He double-checks to see if he has followed through on previous promises and recalls the purpose agreed on for his visit. The teacher is then ready to analyze the problem, to determine the teaching procedures he will use, and to collect any materials or equipment he will need. If necessary, the teacher will study unfamiliar aspects of the problem and gather the information he may need.

In dressing for on-farm instruction, the teacher should avoid both "overdressing" and a "sloppy" appearance. Clean, lightweight work clothes are more often appropriate than the white shirt, necktie, and business suit which the teacher wears at school.

Procedures

When he arrives at the farm, the teacher re-establishes the purpose of the visit with the young farmer. Occasionally it may be advisable to discard the original purpose to deal with an emergency situation, but this is normally not the case. Usually the teacher previews with the young farmer the procedure he has planned and solicits his reactions and suggestions. If the teaching situation has changed drastically from that foreseen by the teacher, a change of procedures may be in order.

Once the purpose and procedures to be followed are agreed upon, the teacher and the young farmer get to work. The teacher maintains a direct relationship with the young farmer during on-farm instruction. Although he is businesslike, he also maintains a friendly and helpful attitude and observes the rules of good teaching. The teacher congratulates the young farmer on his progress and accomplishments and keeps his ear tuned for recognition of new instructional needs.

Before leaving, the teacher agrees with the young farmer on the purpose, date, and hour of the next on-farm instruction visit as well as the preparation the young farmer is to make.

If the teacher is to be efficient in giving on-farm instruction, he must be on guard against over-development of the social aspects of his visit. This problem

increases with time and as the teacher and the young farmer become closer in their relationship.

The teacher of young farmers should keep records of his on-farm instruction, using a form similar to that shown in Figure 5.

ORGANIZING AND CONDUCTING A LOCAL YOUNG FARMER ASSOCIATION

What Is a Young Farmer Association?

The local young farmer association is an organization of, by, and for young farmers who have joined together to pursue common interests. While any given local association may choose its own areas of interest on which to place emphasis, young farmers usually have a strong bond in such areas as improving their farming operations, improving their homes, gaining experience in cooperative effort and community service, developing leadership, and finding satisfying recreational opportunities and social outlets.

In an organization of their own, young farmers can often find better opportunities to meet their needs than are available in other organizations in the community. Older adults are often reluctant to relinquish leadership responsibilities and policy determination to the young generation, and many of the traditional organizations have been designed to meet the needs of older adults.

The Advantages of a Young Farmer Association

1. The group gains a sense of identity which is essential in public relations and in promoting the activities of the group.[9]

2. The young farmers share responsibility for the success of the program with the teacher. The fact that the young farmers do have responsibility is a vital ingredient in providing a favorable climate for leadership training.

3. The young farmers obtain leadership experiences such as presiding over meetings, keeping minutes, managing funds, recruiting members, writing publicity, and participating in group decision making. This frees the teacher from many activities that the young farmers can better do themselves.

4. An active association has a favorable effect on attendance and gives the young farmer program the "muscle tone" of a going organization.

5. The young farmers obtain experience in cooperative and community service activities which would be difficult to provide in a program devoted solely to systematic instruction.

6. The social and recreational activities of the group help in keeping interest high in the young farmer program.

7. New members are more easily attracted.

Getting the Association Started

An active young farmer association may be established in any community where there is a need for such an organization and where a teacher of agriculture is available to serve as advisor. If the young farmer program is being organized for the first time or if it has been inactive for a long time, the teacher should include the possibilities of an association in his initial description of a young farmer program. In this situation, the teacher would discuss the possibilities of forming an association with the school administration at the time a decision is being made to offer a young farmer program. The teacher should also introduce the idea of an association to the young farmers during his initial recruiting visits.

If the young farmer program has been in operation for a number of years without an association and the teacher feels one is needed, he must sell the idea to both the school administration and the young farmers as a separate issue. In this event, the teacher should first clarify the nature and purposes of the young farmer association with the school administration and obtain permission before discussing the issue with the young farmers.

Teachers have found the following procedures effective for informing the enrollees in their instructional program of the possibilities of a young farmer association:

1. Discuss the idea of forming a young farmer association with each young farmer during individual on-farm instruction. Conduct a general discussion of the idea over coffee following a young farmer class.

2. Win the interest of the natural leaders within the class and let them carry the ball. Provide opportunity for the leaders to sell the idea to the young farmers during a regular class session.

3. Have a delegation of young farmers attend a meeting of another young farmer association and bring back the word.

4. Invite the officers of a nearby young farmer association to appear before the young farmer group to explain their organization.

5. Discuss what such an organization would do if formed, and develop a list of activities that would be of interest to the young farmers.

Should the young farmers decide to form an association, a first step might be the election of temporary

officers including a chairman, vice-chairman, secretary, treasurer, and reporter. The teacher of agriculture should serve as advisor.

The second step in organizing might be the development of a brief informal constitution. Acting as a committee of the whole, the group should discuss and agree on the name, purposes, membership, officers and their duties, conduct of meetings, and provisions for amendment. This gives every member a full voice in the formation of the association and enables the members to identify with and understand the new organization. Once the group agrees on its major provisions, the constitution can be turned over to a committee which will develop a brief written document. When the constitution has been reviewed and approved by the school administration and the young farmer group, permanent officers should be elected.

Planning the Annual Program of Events

One of the keys to an active and successful young farmer association lies in the annual program of activities. Every member of the group should participate in planning and carrying out such a program. Furthermore, it must represent the true interests and desires of the young farmers. The program must be planned by the total membership under the leadership of the elected officers. The teacher must remain in the background and remember that no matter how interested he is, he is not a member of the group. The teacher's lack of restraint at this point can have nearly fatal effects on the initiative of the members.

The activities included should be related to one or more of the purposes of the organization and should be stated simply. The following activities are typical:

Sample Annual Program of Activities for a Local Young Farmer Association

Purposes	Activities
RECREATIONAL AND SOCIAL	1. Hold a chicken barbecue. 2. Hold pot-luck suppers at homes of members. 3. Sponsor a bowling or softball team and join local league. 4. Hold parties at homes of members. 5. Conduct tours to points of interest with families.
COMMUNITY SERVICE	1. Sponsor a local farm safety campaign. 2. Develop a community picnic area. 3. Sponsor a community beautification program. 4. Sponsor a Christmas party for underprivileged children in the area.
IMPROVING THE HOME	1. Hold ladies' night meetings on such topics as: a. Budgeting b. Interior decoration c. Landscaping the home d. Planning the insurance program e. Care of children 2. Hold furniture-refinishing bees in the school shop.
COOPERATIVE EFFORT	1. Hold a joint meeting with another young farmer association. 2. Purchase seed, feed, or fertilizer cooperatively for use of members. 3. Sponsor one or more open meetings. 4. Market maple syrup cooperatively.

Maintaining an Active Association[9]

1. An active and expanding membership. After the group has agreed on the annual program, committees should be formed to take charge of each of the activities planned. Every member should be given a position of responsibility that fits his interests and talents. A calendar of activities may be developed to remind each member of his responsibilities.

An alert organization is interested in increasing its membership. Special effort should be devoted to contacting prospective members who will profit from the association. New members add new life to the organization.

2. Well-planned meetings. All meetings should be carefully planned so that business is clearly presented and properly handled. The officers should meet before each

business meeting to plan the agenda. Meetings should start and adjourn as scheduled, and sufficient time should be allotted for business, special events, and social and recreational activities. Most business meetings are followed by refreshments and a social hour.

Many young farmer associations have business meetings once a month. Other associations have business meetings as needed in conjunction with the organized instructional program, and the instructional period is reduced to allow enough time for the association meeting.

3. Year-round meetings. Associations should meet on a year-round basis, concentrating their activities during the winter months and continuing to meet monthly during the remainder of the year. Associations which suspend activity during the summer often find that enthusiasm has cooled when autumn arrives.

4. Adequate financing. A systematic program of financing is necessary if young farmer associations are to be successful. Each association should plan its annual budget carefully according to the needs of the chapter as revealed by the program of activities and in keeping with acceptable methods of raising money for the association. A carefully planned program of fund raising should be developed and approved by the association. Care should be exercised against raising money in any way that would not meet with wholehearted school and community approval.

As a general rule the association should not engage in large-scale business operations which involve extensive sums of money. The young farmer association is primarily an educational program.

Associations may find it wise to establish a small membership fee. Payment of dues stimulates interest in an organization and fosters a feeling of belonging. At the same time it provides funds for refreshments, recreation, and other expenses. The membership fee should not be so large that some individuals are discouraged or prohibited from belonging to the association.

5. Competent leaders who fulfill their duties. The officers are of vital importance in developing and carrying out a good program of activities. Some suggested duties of the officers in a formally organized young farmer association are:

President—

a. Presides at all regular meetings of the local association and its executive committee.
b. Serves as an ex-officio member of all organizational planning committees.
c. Appoints all committees.
d. Provides over-all supervision and leadership of activities of the organization.
e. Counsels with advisor concerning matters of organization policy, changes, improvements, or special events.
f. Represents young farmers in other community organizations or activities.

Vice-President—

a. Presides in the absence of the president.
b. Assists the president in fulfilling the duties of his office.
c. Assumes responsibilities in supervising and assisting with the activities of all standing committees. He keeps the committees active and functioning in promoting the activities of the organization.

Secretary—

a. Keeps an up-to-date roll of membership with the correct address of each member.
b. Keeps an accurate record of attendance at meetings.
c. Records the minutes of all meetings.
d. Attends to all communications concerning the organization.
e. Mails out an agenda for each meeting.
f. Assists the president in counting and recording votes at meetings.

Treasurer—

a. Collects all dues, fees, or special assessments of the organization.
b. Keeps complete financial records.
c. Assists with the annual budget.
d. Assists with the program of financing chapter activities.
e. Pays all organizational fees and debts approved for payment by the organization.
f. Gives a financial report at each meeting or as requested.

Reporter—

a. Works with local paper, submitting news items of all organizational activities using procedures consistent with school policy.
b. Keeps a record of young farmer activities in the form of a history, a scrapbook, or both.
c. Submits news items to the state young farmer organization.
d. Assists with all activities in the area of public relations.

Advisor—

a. Assists all officers in properly carrying out the duties of their office.

b. Consults with all committees that request advice or assistance.
c. Assists officers in working with school officials and in public relations.
d. Exerts an enthusiastic influence upon young farmer work.

6. Spontaneous activities. Most young farmer associations carry on a number of spontaneous activities that add interest and zest to young farmer meetings.[10] Typical of such events are swimming after a summer meeting, bowling after a class session, parties for newlyweds, housewarmings, and special refreshments for birthdays and other occasions.

The Role of the Teacher in Working with the Young Farmer Association

The teacher of agriculture should look upon the young farmer association as an organization of, by, and for the young farmers. If he does so, he will not be inclined to run the association in their stead.

On the other hand, it is the obligation of the teacher to serve as advisor of the association. He must see that the young farmer association and its activities bring credit to the school and do not become involved in politics.

The teacher of vocational agriculture must play two separate and distinct roles in the young farmer program. One of his roles is that of a teacher in charge of giving systematic instruction. In this capacity he assumes full responsibility for the instructional program although he may solicit the assistance of young farmers. Whether instruction takes place on the farm or in the classroom, the role of teacher remains constant.

His second role is that of an advisor to the young farmer association. In this situation the elected officers and the group members are the leaders. The advisor must discipline himself to remain in the background, or he may destroy the initiative of the members and, in the end, the organization itself.[11]

The success or failure of the young farmer program is largely dependent on the ability of the teacher of agriculture to differentiate between his two roles and to play each appropriately.

KEEPING A RECORD OF THE YOUNG FARMER PROGRAM

It is essential that the teacher of agriculture maintain certain records pertaining to the young farmer program. Records are particularly vital to the efficient and effective operation of all aspects of the program. They are useful in compiling reports to local school administrators and the State Education Department. And when there is a change of teachers, records help the new teacher become oriented. Three kinds of records are extremely useful: those pertaining to individual enrollees, those having to do with the program of group instruction, and those concerning the affairs of the young farmer association.

Individual folders should be kept for each participant in the young farmer program. The teacher may obtain official permanent record folders from the Association of Teachers of Agriculture of New York, or he may choose to use plain filing folders. In each young farmer's folder the teacher should keep:

Personal data concerning the young farmer
Young farmer survey forms
Farm business summaries and analyses
Memoranda completed in connection with on-farm instruction
Evaluation forms completed by or with the young farmer

Minimum records in connection with group instruction are:

Summary of instructional needs of the young farmers
Program of instructional meetings
Record of group instruction given including date, problem, hours, and attendance
A folder for each unit of instruction

The teacher of agriculture should establish a repository for certain records pertaining to the affairs of the young farmer association. These records are best kept in the agriculture department and would normally include:

Constitution of the young farmer association
Calendar of activities
Program of work
Individual folders for the use of each officer and committee

EVALUATING AND IMPROVING THE YOUNG FARMER PROGRAM

At least two schools of thought exist concerning the evaluation of educational programs. One group approaches the problem by asking two fundamental questions: What is the purpose of the program? How well has that purpose been achieved? This conceptualization of evaluation will be referred to as the "result-centered" approach.

A second type of evaluation involves two distinctly different questions: What principles and/or procedures have proven effective for achieving the purpose of the program to be evaluated? To what extent have these

principles and/or procedures been utilized? This second concept of evaluation will be referred to as the "method-centered" approach.

The Result-Centered Approach

Evaluation of an educational program utilizing the result-centered approach normally involves a sequence of events such as the following:

1. The purpose (or purposes) of the program is identified and defined operationally by analyzing the purpose and breaking it into measurable components.

2. Appropriate measures for each component (or subdivision) of the purpose are selected.

3. Evidence concerning each measure is collected for the specific program being evaluated.

4. The present status with regard to each measure is compared with

   a. Previous status,

   b. Norms for similar persons, groups, or programs, or

   c. Previously established goals.

This type of evaluation has some obvious benefits. An assessment of progress is obtained which may be of value and interest to learners, teachers, administrators, and others, and continuing educational needs of the learners relating to the purpose(s) of the program are revealed.

The result-centered evaluation may give an accurate assessment of how far we have come and what remains to be done, but it cannot tell us why this is true nor what or who is responsible for the results.

The Method-Centered Approach

The method-centered approach to evaluation typically proceeds by the following steps:

1. A job analysis is made of what the teacher must do to conduct a successful program, using a process (or step-by-step) approach.

2. For each phase of the job analysis, specialists determine the most effective principles and procedures.

3. Data is collected to indicate the extent to which the recommended principles and procedures have been used.

4. The evaluator weighs the evidence and rates the program on the basis of the degree to which the principles and procedures have been followed.

The main outcome of the method-centered evaluation is an assessment of the degree to which a teacher has used the most effective methods. It is based on the assumption that the profession has had sufficient experience to select preferred methods. It further implies that improvement in the program can be achieved by more diligent application of these methods.

The method approach has some advantages: It provides a means by which the inexperienced teacher, the administrator, or the lay person can compare the methods used in conducting a program with those recommended by knowledgeable and experienced persons, it may suggest why a program has produced less than satisfactory results, and, at the same time, suggest remedial procedures. The method approach, therefore, deals with *why* the program is where it is and how it can be improved.

This approach, however, has two shortcomings. It makes no attempt to measure the educational program in terms of the learners, and it does not admit there is more than one way to achieve the same result.

Why Evaluate the Young Farmer Program?

Any systematic evaluation of the local young farmer program should serve at least three purposes:

1. To determine the progress of the participants toward establishment in farming.

2. To point out the young farmers' instructional needs for use in program planning during the year ahead.

3. To suggest adjustments in the teacher's methods and procedures.

An Instrument for Evaluating the Young Farmer Program

Most teachers of agriculture have neither the time nor the means to construct an evaluation instrument. For this reason one is presented below for the teacher's use in conducting a self-evaluation of his young farmer program. (Figure 6.)

Part A: *Progress toward Establishment in Farming* uses the result-centered approach to evaluation. It emphasizes definitions of the purpose of the young farmer program and of establishment in farming presented at the beginning of this publication, and is heavily oriented toward farm business management.

Part B: *Guidelines and Procedures Employed by the Teacher in Organizing and Conducting the Young Farmer Program* embodies the method-centered approach to evaluation. It emphasizes the methods presented throughout this publication and the concepts of systematic instruction and problem solving which have been presented in detail.

Procedures for Evaluating

It is suggested that the teacher employ the following steps in evaluating the young farmer program:

1. Collect the data called for in Part A: *Progress toward Establishment in Farming* with the help of each young farmer during individual on-farm instruction visits.

2. Review with each young farmer his progress toward establishment in farming, help him to set new goals for the current year, and develop a list of instructional needs which should be emphasized in planning next year's instructional program.

3. Summarize the data obtained on Part A: *Progress toward Establishment in Farming* using averages or other devices for protecting the identity of individual young farmers.

4. Present the findings from Part A at a young farmer meeting and discuss improvement of the program.

5. Complete Part B: *Guidelines and Procedures Employed by the Teacher in Organizing and Conducting the Young Farmer Program* following the suggested instructions, and decide on changes to be made.

6. Review the findings of both Parts A and B with the agricultural advisory board and obtain their suggestions for changes in the program.

Following up on Evaluation[13]

The payoff from evaluation efforts can only come when the teacher and the young farmers use the findings as a basis for action. Young farmers can use the information revealed about their progress toward establishment in farming in setting new goals, in revising their farm business management plans, and in budgeting their resources for the year ahead. Likewise, the teacher and the young farmers can use their new insights into the instructional needs of the young farmers in planning a program of instruction for the next year. And as the teacher and the young farmers try to overcome weaknesses in the program by adjusting methods and procedures, the value of evaluation will be evident.

Figure 6. Part A: Progress toward Establishment in Farming

Components of Establishment in Farming	Measures for Each Component	Sources of Data	This Year's Goal	Status		
				This Year	Last Year	Comparison Group
1. Financial progress	Total capital investment in farm business.	Inventory				
	Percent of business resources controlled.	Inventory				
	Trend in labor income.	Cash Account Book				
	Increase in net worth.	Personal inventory				
2. Proficiency and experience in performing skills and making management decisions.	Proportion of major decisions made by young farmer	Interview with young farmer				
		Farm Business Chart				
	Size of business					
	Number of cows					
	Pounds of milk sold					
	Man equivalent					
	Number of hens					
	Total tillable acres					
	Total P.M.W.U.					
	Labor efficiency					
	Cows per man					
	Work units per man					
	Pounds milk sold per man					
	Hens per man					
	Crop yields					
	Tons of hay per acre					
	Tons of silage per acre					
	Bushels of oats per acre etc.					
	Animal production					
	Pounds of milk per cow					
	Dozens of eggs per hen					

Part A: Progress toward Establishment in Farming—*continued*

3. Proportion of income from farming	Percent of income	Interview with young farmer				
4. Establishment in the community	Tenure standing in farming Attitude toward farming Farm experience since age 15 Educational program participation Officer participation in organizations Attitude of wife (partner or parent) toward farming Agricultural agency participation Community residence in years Age of farmer Leadership self-confidence rating	Interview with young farmer ↓				
5. Improvement[12] in level of living	Value of sales from farm Value of farmland and buildings Telephone Home freezer Automobile	Interview with young farmer ↓				

Part B: Guidelines and Procedures Employed by the Teacher in Organizing and Conducting the Young Farmer Program

Directions:

1. Place a check mark (√) in the column labeled *Strong Aspect* following each of the items below which you accept and have fully implemented in your young farmer program this past year. Go all the way through the checklist before proceeding to Direction 2.

2. Go through the checklist again. This time, place a check mark (√) in the column labeled *Will Try* following each item not fully implemented this past year, but which you are willing to accept tentatively and which you will attempt to implement in your young farmer program this next year.

	Strong Aspect	Will Try
I. FUNDAMENTAL CONSIDERATIONS		
A. The major purpose of the young farmer program is to assist young men in becoming successfully established in farming as owner-operators		
B. The young farmer program is planned to meet the needs of young men 16 or over who are out of school and in the process of becoming established in farming		
C. A young farmer is considered to be successfully established in farming when he meets certain criteria:		
1. He possesses considerable financial equity in his farm business (perhaps 50 percent)		
2. He is proficient and experienced in making farm business management decisions and in performing the manipulative skills involved in the type of farming in which he is engaged		
3. He looks to farming as the main source of his livelihood		
4. He provides himself and his family with a standard of living at least average for the community		
5. He is accepted in the community as a responsible participating citizen		

	Strong Aspect	Will Try
D. The young farmer program is an educational endeavor designed to provide two types of service to young farmers: systematic instruction and participation in the local young farmer association		
1. Systematic instruction is a process whereby the young farmers, with the guidance and help of the teacher of agriculture,		
a. Identify the problems confronting them in their individual farm business situation		
b. Consider alternatives and plan solutions to these problems as a result of group and individual instruction		
c. And apply the solutions in their individual farm business situations		
2. The local young farmer association is an organization of, by, and for young farmers which provides an opportunity for training and experience in		
a. Leadership		
b. Cooperation		
c. Community service		
d. Social and recreational activities		
E. Certain conditions essential to the success of a young farmer program are present.		
1. A competent, well-trained, and interested teacher		
2. An informed, sympathetic school administration		
3. A sufficient number of interested young farmers		
4. Adequate teacher time		
5. Close coordination with other agencies serving the farmer		
II. MAKING ADMINISTRATIVE ARRANGEMENTS		
A. The young farmer program is planned in advance with the school administration		
1. The school administration understands the purpose and nature of the program		
2. The school administration has a favorable attitude toward the young farmer program		
3. The school administration grants permission to conduct the program		
4. School policy is established in advance concerning:		
a. Teacher time to conduct the program		
b. Expenses to be paid by school		
c. Use of school facilities by young farmers		
d. Selection of participants		
e. Reports to be submitted		
B. Information about the young farmers in the area served by the school is collected before contacting them		
1. The teacher compiles a list of potential enrollees from:		
a. Permanent record files of school		
b. Agriculture department records		
c. Advisory board suggestions		
d. Persons with an extensive knowledge of local people, i.e., feed store operators, rural organization leaders, high school agriculture students, extension personnel, etc.		

	Strong Aspect	Will Try
2. The teacher attempts to discover the following information concerning each young farmer:		
a. Name		
b. Address		
c. Date of birth		
d. Location of farm		
e. Marital status		
f. Farming status		
g. Highest grade completed in school		
h. Degree of need for the program		
C. The criteria established for selecting the young farmers to be invited to participate include:		
1. Live in patronage area of school		
2. In the process of becoming established in farming		
3. Need the program		
4. Constitute a fairly homogeneous group as far as age, marital status, previous education, and farming status are concerned		
D. Recruiting visits are made by the teacher to contact young farmers at their farms		
During recruiting visits, the teacher:		
1. Gets acquainted with the young farmer		
2. Explains the young farmer program		
3. Discovers his plans for the future		
4. Finds out if he is interested		
5. Collects information about other young farmers		
6. Informs the young farmer what to expect of him next		
7. Limits the visit to 15 or 20 minutes		
E. The teacher tries to coordinate the young farmer program with other agencies serving farmers		
1. He explains the unique features of the program		
2. He invites the participation of agency personnel		
3. He exerts leadership in coordinating dates, events, and mutual assistance		
III. DETERMINING NEEDS AND PLANNING INSTRUCTIONAL PROGRAMS		
A. A farm business survey is made with each young farmer to determine his instructional needs		
B. The procedures used by the teacher in making the farm business survey include the following:		
1. An appointment is made in advance with the young farmer		
2. The teacher explains the purpose of the survey		
3. He walks the farm with the young farmer		

	Strong Aspect	Will Try
4. The following information is gathered:		
a. Data for a farm business analysis		
b. Approved practices in use		
c. Improvements and new practices planned		
d. A list of farm problems with which the young farmer needs help		
C. The farm business surveys are summarized		
1. A frequency chart is used to summarize the farm problems with which the young farmers need help		
2. Felt and unfelt needs are designated differently		
3. The teacher identifies the problems with which the largest number of young farmers need and want help		
D. The first meeting of the year includes:		
1. A welcome by the school administrator		
2. Planning of the content of the instructional program		
a. The teacher presents the common problems identified by the farm business surveys		
b. Additions and deletions are made by the young farmers		
3. Deciding on the number and frequency of meetings to be held		
4. Scheduling of dates for each problem included in the instructional program		
a. At least one meeting per month is planned		
b. More frequent meetings are planned for slack work season		
5. Discussion of plans for young farmer association		
6. Refreshments		
IV. CONDUCTING GROUP INSTRUCTION		
A. Farm business management is established as the core of the instructional program for the young farmer program		
B. The teacher makes detailed written teaching plans for each problem to be solved		
Such plans include		
1. Statement of the problem		
2. Teaching objectives		
3. Analysis of problem content		
4. Teaching procedures		
5. Instructional materials required		
C. The teacher consistently uses problem-solving procedures in his group instruction		
D. Every young farmer has an opportunity to assist the teacher in conducting group instruction in a role consistent with his capabilities		
E. The teacher makes extensive use of the principles and procedures effective in promoting learning with young farmers		

V. GIVING ON-FARM INSTRUCTION

	Strong Aspect	Will Try
A. Individual on-farm instruction is used as a means to		
1. Follow up on group instruction		
2. Help young farmers solve individual problems		
3. Assist young farmers in determining their instructional needs		
B. The teacher makes appointments for individual on-farm instruction at least a week in advance for		
1. A specific hour		
2. A specific date		
3. A specific purpose		
C. The teacher prepares for on-farm instruction by		
1. Reviewing his record of the previous visit		
2. Double-checking to see if he has followed through on promises		
3. Analyzing the problem		
4. Determining teaching procedures to be used		
5. Collecting materials or equipment needed		
6. Studying unfamiliar aspects of the problem		
7. Dressing appropriately for the teaching procedures planned		
D. Upon arrival at the farm the teacher		
1. Re-establishes the purpose of the visit		
2. Previews his plans with the young farmer		
3. Seeks an appropriate location and gets to work		
4. Maintains a friendly but businesslike attitude toward the young farmer		
5. Congratulates the young farmer on progress and accomplishments		
6. Watches for and records new instructional needs		
7. Makes an appointment for his next visit		
E. The teacher keeps a record of each on-farm instruction visit.		
Such records include		
1. Date		
2. Name of young farmer		
3. Hours of instruction given		
4. Miles travelled		
5. Purpose of instruction		
6. Progress made		
7. New instructional needs discovered		

	Strong Aspect	Will Try
8. Promises made		
9. Purpose, date, and hour of next visit		

VI. THE LOCAL YOUNG FARMER ASSOCIATION

A. There is a local young farmer association of, by, and for young farmers		
B. The constitution includes		
1. Name of the association		
2. Purposes		
3. Membership		
4. Officers and their duties		
5. Conduct of meetings		
6. Provisions for amendment		
C. An annual program of activities is planned and carried out		
1. Every member participates in its formulation		
2. Every member has a responsible part in carrying it out		
3. The program of activities represents the true interests and desires of the young farmers		
4. The activities are related to		
a. Cooperative effort		
b. Community service		
c. Improving the home		
d. Recreation and social gatherings		
5. Committees have charge of each activity planned		
D. The association is active as evidenced by		
1. An expanding membership		
2. Well-planned meetings		
3. Year-round operation		
4. Adequate financing		
5. Competent leaders who fulfill their duties		
6. Participation in spontaneous activities		
E. The role of the teacher in advising the local young farmer association includes		
1. Providing leadership training		
2. Assisting the officers in carrying out their duties		
3. Consulting with committees who request advice or assistance		
4. Assisting the officers in developing good public relations		

	Strong Aspect	Will Try
5. Maintaining liaison with school authorities		
6. Exerting an enthusiastic influence		
VII. EVALUATING THE YOUNG FARMER PROGRAM		
A. An annual evaluation of the young farmer program is made which		
1. Assesses the progress of the young farmers toward establishment in farming		
2. Points out the instructional needs of the young farmers which should be emphasized in planning the program for the year ahead		
3. Suggests adjustments in the procedures employed by the teacher		
B. In evaluating the young farmer program, the teacher		
1. Collects data necessary for assessing progress toward establishment in farming with the help of each young farmer during on-farm instruction		
2. Reviews with each young farmer his progress toward establishment in farming, helps him to set new goals for the coming year, and develops a list of instructional needs		
3. Summarizes the data obtained (in 1 and 2) above, protecting the identity of individual young farmers		
4. Presents the findings at a young farmer meeting and leads a discussion of improvement of the program		
5. Makes a systematic review of the methods and procedures used for organizing and conducting the young farmer program and decides on changes to be made		
6. Reviews the findings of the evaluation with the agricultural advisory board and obtains their suggestions for improvement		
7. Utilizes the information discovered concerning instructional needs of the individual young farmers in planning next year's instructional program

ABSTRACTS; *HOSPITALS; *ANNOTATED BIBLIOGRAPHIES; INDEXES (LOCATERS); *INSTITUTIONAL ADMINISTRATION; *MANAGEMENT

The purposes of the Information Center are to find new and non-circulated studies, to assemble current information, and to make new studies readily available. Published quarterly with the advice of the University Hospital and the Department of Industrial Engineering, the abstracts are classified under 42 headings, some of which are: (1) administrator and board, (2) accounting and business office, (3) areawide planning--hospital and related facilities, (4) chronic disease facilities and programs, (5) community attitude and public relations, (6) dietary, (7) health services--use, need, and demand, (8) housekeeping, (9) infection control, (10) insurance and prepayment, (11) laboratories, (12) laundry, (13) medical staff and medical care, (14) medico-legal, (15) management science and operations research, (16) manpower, (17) nursing service department, (18) obstetric service, (19) operating room and recovery room, (20) outpatient, (21) emergency and home care, (22) patient attitude, (23) personnel administration, (24) pharmacy, (25) psychiatric facilities and services, (26) physical therapy, (27) purchasing, (28) storeroom and central supply, (29) specialized care units, (30) social service, and (31) bibliographies, abstracts, and anthologies. There are subject and author indexes. (JK)

The inscription at the top of the cover page is an abstract design representing a word used for hospital in northern India. The design is patterned after Devanagari script, derived from Sanskrit.

Recognized as a repository of studies* by

- American Institute of Industrial Engineers, Hospital Division
- Association of University Programs in Hospital Administration
- The Catholic Hospital Association of the United States and Canada
- Hospital Management Systems Society, a personal membership division, the American Hospital Association
- W. K. Kellogg Foundation
- The Nuffield Provincial Hospitals Trust

*Private or confidential studies excepted.

Abstracts of Hospital Management Studies

VOLUME IV, No. 3 MARCH, 1968

Published quarterly by the Cooperative Information Center of Hospital Management Studies, operated by the Program in Hospital Administration, with the advice of the University Hospital, and the Department of Industrial Engineering all of the University of Michigan. The representatives of the universities and national agencies of the Advisory Board have substantially aided the development of the Information Center.

Purpose of the Information Center

1. *Find new and non-circulated studies.*

   (a) Find new and significant studies of hospital management and hospital planning made under the auspices of university, government, hospital, or any other research entity.

   (b) Search out unpublished studies and those with limited or regional distribution.

2. *Assemble current information.*

   (a) Search health journals and other pertinent literature.

   (b) Consider the relationship of the hospital to other integers of health care such as physician, patient, community, and others.

   (c) Search the environment in which hospitals operate – in the areas of planning, financing, and utilization.

   Emphasis is to be placed on information gathered through structured studies and surveys.

3. *Make new studies readily available.*

   (a) Through *Abstracts of Hospital Management Studies* make abstracts of significant current studies and surveys available to researchers and practitioners of hospital management.

   (b) Make original text of studies not available in published form obtainable on microfilm and in Xerox.

Manuscripts and New Materials

The items accepted into the Information Center collection have been contributed by their authors or publishers and represent efforts at factual analysis of hospital management problems. Similar contributions are encouraged. Items submitted must be legible copies or originals and should include as full a background of supporting material as possible. No special manuscripts need be prepared. Duplicate copies are not required. For publicly sold items, the Information Center will pay the normal price if requested. Unless special requests are made, items submitted become the property of The University of Michigan and are not returned.

Send new items to:

John R. Griffith
220 East Huron Street
419 City Center Building
The University of Michigan
Ann Arbor, Michigan 48108

Subscriptions

Subscriptions to *Abstracts* are $15.00 per annum, for three quarterly issues and a fourth cumulative issue. Write: Cooperative Information Center for Hospital Management Studies, The University of Michigan, 419 City Center Bldg., 220 E. Huron St., Ann Arbor, Michigan 48108.

Purchase of Items Described in Abstracts

Wherever possible, copies of the complete documents included in the *Abstracts* are available to interested readers. Certain items not published in large quantities or out of print are reproduced by University Microfilms, Inc., a subsidiary of the Xerox Corporation. These may be purchased directly from them.

Two forms are available:

Microfilm:

35 mm reel, black-on-white-ground, suitable for viewing through reader or filmstrip projector. Because of the difficulty of handling short strips, similar items from the *Abstracts* are grouped together until a minimum length of film has been reached.

Xerox:

¾ size permanent Xerox reproduction of each page of the item requested. Photographs do not reproduce, although line drawings, graphs, and similar material do.

Ordering:

U.M.I. items can be ordered from
University Microfilms, Inc.,
300 North Zeeb Road
Ann Arbor, Michigan 48106.
Specify abstract or reel number and type of reproduction (Xerox or microfilm) required. Other items should be ordered from the publisher or source listed above the abstract.

Complete library purchase:

It is possible to purchase as a unit all items described in this issue as available from University Microfilms. To do this, specify all reels of this volume and issue, *Abstracts of Hospital Management Studies*.

Responsibility for Contents

Because of the broad policies for acceptance of contributions, The University of Michigan accepts no responsibility for the accuracy of original documents. It does not claim nor wish to imply that it endorses, supports, or verifies either the method, the findings, or the conclusions of items described herein.

HOW TO USE ABSTRACTS

Abstracts of Hospital Management Studies is designed to acquaint the reader with studies and research in a given field and to help him obtain copies of reports he wants. Following is an example of the information given about each item.

Classification: Studies are grouped according to a classification system in which the categories are hospital departments and other pertinent headings.

See also: Readers may be also interested in related classifications.

OBSTETRIC SERVICE

Sister M. Yolanta
EXPERIENCE WITH ADMISSIONS OF NONINFECTED GYNECOLOGICAL PATIENTS TO THE MATERNITY UNIT
Department of Epidemiology and Public Health, Yale University, New Haven, Connecticut
1966

Available from U.M.I.

Xerox
Film reel 1.71 $4.60

A report of a controlled study Pilot Program for determining the feasability of a combined Obstetrical-Gynecological Unit for more efficient and economical operation at Griffin Hospital, Derby, Connecticut.

Two areas of investigations were undertaken: the comparison of patients' views as to OB or medical-surgical accommodations; and the relationship between OB census and gynecological census. (Clean gynecological patients assigned to OB unit were placed in separate wing of unit as much as possible away from OB patients).

Data on admissions and census were obtained from hospital records. Questionnaires in interviews were submitted to gynecological patients both in OB units and medical-surgical units.

Author concludes little anxiety or apprehension shown by gynecological patients in OB unit. Combining patients did not create "tight bed situation". Waiting list for gynecological patients not shortened. Differences in overall occupancy "not significant". Interview and questionnaire forms included in appendix. See Abstract Nos. OB0019 and OB0011. (L.E.W.)

Available from: These lines tell where to order the study and its price. "U.M.I." means microfilm or xerox copies can be ordered from University Microfilms, Inc., 300 N. Zeeb Rd., Ann Arbor, Michigan (give abstract #-OB0020- or film reel #-1.71). Journals and books are ordered from the publisher or through your local bookstore.

Descriptors: This study has 118 pages, a bibliography, data, is a master's thesis. It came to the Center in February, 1967.

Sister Mary Rene McNiff
ADMINISTRATOR'S POLICY MANUAL
Graduate Program in Hospital Administration, Xavier University, Cincinnati, Ohio, 1966
Available from U.M.I. Xerox $9.15
Film reel #2.04 $4.75

This manual was developed for Our Lady of Lourdes Memorial Hospital, New York, and is intended as a policy manual, as differentiated from a procedure manual or administrator's guide. It includes an introduction, five major sections and an appendix and bibliography. Section II explains the basic philosophy of Daughters of Charity which operate the hospital, the governing board, administrator, advisory board and medical staff. Section III considers external influences on policy: statutory regulations; accrediting bodies; other health facilities; organizations; and national activity study participation. Section IV deals with internal regulators of policy inherent in day-to-day operation of hospital. Section V considers financial policies and Section VI deals with administrative departmental relations and interdepartmental policies. Included are organization charts and graphic displays and schedules of hospital facilities. (D.F.B.)

Bingham, Fletcher Havens
GRADUATE EDUCATION FOR HOSPITAL ADMINISTRATION: A CRITIQUE AND A PROGRAM
Graduate Program in Hospital and Health Administration, University of Iowa, Iowa City, Iowa 1967
Available from U.M.I. Xerox $9.70
Film reel #2.05 $4.25

An overview of graduate education in the United States in general and of the graduate work in hospital administration in particular.

The changing emphasis of problem areas facing administration as shown by citations from correlated studies (1938, 1961, 1963) was the basis for the author's call for a reexamination of the goals of graduate education in hospital administration.

The author recommends higher standards in graduate study in hospital administration and possible differentiation between programs, yet with greater alignment "to the general capabilities of graduate education in general". (L.E.W.)

AB2011 36pp.R., 9/67

Hudson, Jay M.
THE ADMINISTRATOR, THE MEDICAL STAFF AND DISCIPLINE: A DOCUMENTATION OF THE AVENUES USED BY THE ADMINISTRATOR IN THE DISCIPLINING OF MEMBERS OF THE MEDICAL STAFF
Program in Hospital Administration, University of California, Berkeley, California, 1967
Available from U.M.I. Xerox $3.00
Film reel #2.05 $4.25

Four hospital administrators from four different types of hospitals were interviewed to determine methods they used to discipline members of the medical staff and to ascertain their opinions concerning their authority to discipline. One of the four thought administrators had no authority to discipline. The general consensus of the other three was that administrators had authority, but the best approach is to work through and with the medical staff to the point where disciplinary action is accomplished by the medical staff as a result of diplomatic pressures by the administrator. The most often used form of discipline was verbal, person to person communication. Study found direct disciplinary action was taken when situation demanded it and when there were specific written procedures covering the situation. Copy of questionnaire used is included. (D.F.B)

Dolson, Miriam T.
PRELIMINARY REPORT ON THE CORNELL STUDY OF THE HOSPITAL ADMINISTRATOR
Sloan Institute of Hospital Administration, Cornell University, Ithaca, New York, 1967
Available from original publisher

This reports is concerned with an analysis of characteristics and attitudes of U.S. and Canadian administrators. Data were obtained from approximately 4,600 completed questionnaires, out of a total of 8,500 mailed in U.S., Canada and U.S. possessions in January, 1965. Part I compares characteristics of respondents with those of overall population of hospital administrators. It is concluded that sample is quite representative of total group. Part II analyzes the administrator according to such factors as educational and socio-economic backgrounds; attitudes, values and interests related to choosing hospital administration as a profession; patterns of geographic and occupational mobility; and participation in community and larger health system. Part III compares university hospital administration program graduates with non-program graduates for similar factors. Findings indicate a profile of average administrator would show he is between forty-five and fifty-five; grew up in community of less than 10,000; married with a child under 18; has some post-graduate training; has held present position seven years; worked in three different states; and is in the $10,000 - $15,000 income category. (D.F.B)

Thompson, William Louis
AN EXPLORATION OF THE IMAGE OF PUBLIC HEALTH DEPARTMENTS HELD BY HOSPITAL ADMINISTRATORS
St. Louis University, St. Louis, Missouri, 1966
Available from U.M.I., document no. 67-2971
Xerox $5.20
Film reel $3.00

An assessment of the attitudes of hospital administrators toward public health departments. Study was made through questionnaire sent to administrators of 492 short-term acute general hospitals (a 10 per cent sample of those hospitals listed by A.H.A.). A significant relationship was found between a positive image of public health departments held by certain hospital administrators and the voluntary contacts made by public health departments. (L.E.W.)

GRADUATE EDUCATION IN HOSPITAL ADMINISTRATION
Hospital Administration, Fall, 1967, Vol. 12, No. 4
Available from original publisher

A special edition devoted to the several aspects of graduate education in hospital administration in the U. S. Articles by educators and other professionals discuss the trends, the orientations, the two-year curricula, the developing roles of administrators, the quality of programs, and the programs in some other countries. (L.E.W.)

AB2016 85pp.b.d.th.Ph.D., 12/67

Gintzig, Leon
HOSPITAL ADMINISTRATION IN HIGHER EDUCATION: A CURRICULUM IN HOSPITAL ADMINISTRATION EDUCATION
State University of Iowa, Iowa City, Iowa, 1958
Available from U.M.I., document no. 58-1611
Xerox $4.00
Film reel $3.00

This study is an attempt to view and appraise the controversial issues raised in this field. Data is gathered by the direct inquiry-questionnaire and personal interview-from a sample of qualified and representative contributors concerning their attitudes toward hospital management education. The questionnaire was concerned with information of general interest relating to the hospital administrative employee and with opinions concerning the structure of the curriculum. These data are analyzed and a curriculum pattern for professional hospital administration education determined. The purposes and place of hospital administration education have frequently been stated with too little understanding of the role of the institution of higher learning in relation to professional preparation. This study, then, also discusses some commonly used approaches today in studying the professional curriculum, but not alone as they relate to the needs of the student at the graduate level since the writer believes a study of this kind must be undertaken by viewing the educational problem of the future professional hospital administrator as a whole.

It is concluded that professional education for hospital administration cannot be adequate unless it includes portions of general and special education interwoven with supervised practical experience, all of this to start early in the undergraduate years. (Author's abstract, adapted)

ELECTRONIC DATA PROCESSING IN INTRA-DEPARTMENTAL FOOD COST ACCOUNTING
Journal of the American Dietetic Association, October, 1967, Vol. 51, No. 4, pp. 332-335
Available from original publisher

A study of a data processing system for determining daily food costs for each unit in a medical center. A computer was used to standardize a summer menu of about 200 recipes and to determine its cost per serving and per pound. Forms for recording and identifying data were developed. Study concludes a data processing system of cost accounting is valuable in determining and justifying charges but work is needed to develop methods of identifying labor and overhead costs. (A.R.N.)

Drinkwater, David Anthony
MODEL FINANCIAL STATEMENTS - BASIS OF A PROPOSED REIMBURSEMENT FORMULA TO CONTROL HOSPITAL COSTS
Michigan State University, East Lansing, Michigan, 1966
Available from U.M.I., document no. 67-1618
Xerox $6.00
Film reel $3.00

The author reviews the development of the American hospital system with particular emphasis on current forms of ownership and methods of financing operation. He then proposes a reimbursement form entitled "Community Service Method" which contains an "Eligibility Cost Control System". The Community Service Method is then compared to three other reimbursement formulae in so far as they affect "financial capacity" and "cost incidence". The four methods differ as to the items to be reimbursed, the method of cost apportionment, and the system of controlling cost. The differences in results under the four plans using simulated data were found to be "significant in terms of total and relative financial capacity" with the highest cash balances resulting under the Community Service Methods. (L.E.W)

Menn, Hubert L.
COST ACCOUNTING AND BUDGETING FOR STATE MENTAL HOSPITALS
University of Texas, Austin, Texas, 1957
Available from U.M.I., document no. 23,051
Xerox $11.30
Film reel $ 3.25

A study made to develop principles and procedures of accounting and budgeting for state mental hospitals with special emphasis on procedures for determining departmental and functional costs and to the relationship between budget control and functional cost accounting. The major portion of the study is devoted to "the departmentalization of the hospital operation and the classification and distribution of expense". The basic principles of budgeting are explained and the general procedures outlined. Information on problems and practices of other states was derived from returns of a ten-page questionnaire. Text of questionnaire and tabulated results are given in the appendix. (L.E.W.)

Moser, Dennis R.
A STUDY TO IDENTIFY PATIENT FACTORS WHICH RELATE TO PROMPTNESS OF PAY FOR HOSPITAL SERVICES
Program in Hospital Administration, University of Minnesota, Minneapolis, Minnesota, 1967
Available from U.M.I. Xerox $3.00
Film reel #2.06 $4.50

Study was conducted among 10 per cent random sample of orthopedic patients at Baylor University Medical Center to determine if factors of marital status, age, sex, type of admission, residence, credit rating, length of stay, size of bill remaining after final insurance payment has been received and delay in receiving insurance payment are related to promptness of patients to pay for hospital services. Two promptness-to-pay groups were studied: those who pay within ninety days after final insurance payments are received; and those who do not pay in full within 120 days. Data were analyzed using Chi Square and Kolmogorov-Smirnov tests. Study found age to be the only significant factor. Patients twenty-three through forty-five years showed increasingly greater history of non-payment, whereas patients forty-six and older showed increasingly a greater history of payment within the allotted acceptable time. A study into the effect of a combination of factors is recommended. (D.F.B.)

Wilczynski, Jerome
ANALYSIS OF ACCOUNTS PAYABLE FUNCTION
Community Systems Foundation, 111 North Main, Ann Arbor, Michigan 48108, 1967
Available from U.M.I. Xerox $3.00
Film reel #2.06 $4.50

This report analyzes the unnecessarily long time lags between receipt of invoices from vendors and the preparation of checks. Solving the problem should lead to the lowering of the hospital's liabilities. Involved is the establishment of procedures to be adhered to in the accounts payable function, at Highland Park (Michigan) hospital. (Author's abstract, adapted)

GENERAL NON-DEPARTMENTAL ACTIVITIES

AD4011 130pp.b.d.th.Ph.D., 12/67

McLees, William Anderson
A SURVEY AND CONTENT ANALYSIS OF HOSPITAL EMPLOYEE HOUSE ORGANS WITHIN BED-CAPACITY RANGE 200-499
State University of Iowa, Iowa City, Iowa, 1958
Available from U.M.I., document no. 58-1615
Xerox $5.85
Film reel $3.00

A questionnaire was submitted to 500 randomly selected U. S. hospitals (200-499 beds) for information on the use of employee house organs. Analysis of content was made of 116 publications. Approximately 60 per cent of content was devoted to six subject categories: personals; features; employee staff; students, interns, and residents; entertainment and social events; and professional departments. From the analysis and from findings of questionnaire, the author concluded house organs were used effectively by respondents as a means of communication to hospital employees. (L.E.W.)

DEVELOPMENT OF A PATIENT COORDINATOR SYSTEM FOR MEMORIAL HOSPITAL AT EASTON, MARYLAND, INC.
Community Systems Foundation, 111 North Main, Ann Arbor, Michigan 48108, 1966
Available from U.M.I. Xerox $3.00
Film reel #2.06 $4.50

Report discusses a hospital's admitting and discharge procedures and develops a proposal for coordinating them. Data for study are based on volume statistics of patient arrivals and discharges during a two-month period and job profiles prepared by employees. Information for implementing new system covers staffing plan, work scheduling and organizational layout. (H.M.)

"MEDELCO BED SCHEDULER" COMMUNICATION SYSTEM
Graduate Program in Hospital Administration, Xavier University, Cincinnati, Ohio, 1966
Available from U.M.I. Xerox $3.00
Film reel #2.06 $4.50

A description of the planning, installation, and operation of a "Bed Scheduler", a commercial computerized communication system which gives print-out information on bed status to admitting office, housekeeping, business office and dietary from input panels in nursing units. Print out gives location, bed number, sex of patient, and information as to bed being occupied, patient leaving that day, patient discharged, patient expired, transfer in or out, out of service, maid carbolizing bed or finished, bed out of service, or correction of input. Author outlined problems encountered and methods of debugging. After one month's operation author feels the system has increased efficiency. (L.E.W.)

STERILE, CONVENIENT, ECONOMICAL, DISPOSABLE SPINAL ANESTHESIA TRAYS. FACT OR FANTASY
Anesthesia and Analgesia, Current Researches, 1967, Vol. 46, No. 2, pp. 191-194
Available from original publisher at 3645 Warrensville Center Road, Cleveland, Ohio 44122 at $3.00 per copy

Computer analysis of 967 spinal blocks administered with disposable trays containing drugs and 11,419 spinal blocks performed with hospital trays containing drugs revealed no difference in duration of anesthesia, nor were there any neurologic complications. A study of 757,848 disposable spinal block trays showed no neurologic complications from the use of the 242,018 trays containing no drugs. Thirty-four documented cases of aseptic meningitis occurred with 359,000 drug-containing trays; the patients all recovered without residual. The pharmaceutical company manufacturing the disposable spinal block trays has subsequently substituted Pontocaine, Novocain, and dextrose in the drug-equipped trays. No neurologic complications have been reported from the use of approximately 11,700 block trays containing these new drugs. A NEW APPROACH TO PLANNING THE GROWTH OF A METROPOLITAN HOSPITAL SYSTEM - Working Paper No. S-1
Regional Science Research Institute, 1314 N.W., 43rd, Seattle, Washington 98105, 1967
Available from original publisher

(This paper continues discussion of previously cited work, AR0036, 0037, 0038.)
The service area approach to the estimation of future bed-need is shown to be unworkable in an urban area. It is suggested that the capacity (how many) estimating and the locational (where) distribution aspects of the bed-need estimate be treated separately at a metropolitan-wide scale. Primary attention is given to the locational aspect of the problem. The sectorgram technique is proposed as a method for describing and evaluating both the present and projected degree of spatial correspondence between hospital facilities and the patients which they serve. Its use would require that a new approach to area-wide hospital planning be developed. One such approach is outlined.

MEASURING THE GEOGRAPHIC BALANCE OF A METROPOLITAN HOSPITAL SYSTEM
Regional Science Research Institute, 1314 N.E. 43rd Street, Seattle, Washington 98105, 1967
Available from U.M.I. Xerox $3.00
Film reel #2.06 $4.50

This paper is similar to previously reported AR0036, Volume IV, no. 2, and others discussing the geographic patterns of use of urban hospitals. In this work, the geographic pattern of patient residences, physicians' offices and hospital facilities is compared for each of four specialties: general practice, pediatrics, obstetrics/gynecology and general surgery. Overall, it is apparent that the Cincinnati hospital system exhibits a distinct lack of geographic balance and that a massive decentralization of hospital facilities would be required to achieve a reasonable level of geographic balance in the future. While physicians' offices exhibit a reasonable degree of geographic balance in all cases, it is clear that a decentralization of hospital facilities could reduce the various types of travel required of both physicians and patients. Other possible costs and benefits which might accompany an increased degree of geographic balance are also briefly discussed.

HOSPITAL STUDY DISTRICTS FOR METROPOLITAN CHICAGO
Hospital Planning Council for Metropolitan Chicago, 79 West Monroe Street, Chicago, Illinois 60603, 1966
Available from U.M.I. Xerox $3.40
Film reel #2.06 $4.50

A technical bulletin outlining a method for defining service districts in multihospital areas which can be applied to any metropolitan region. Such geographic units permit areawide planning councils to relate needs for health facilities to specific population groups and are determined in this report through consideration of geographic, traffic and trade, and market analysis concepts. Seventeen hospital districts in Chicago were delineated by the use of origin-destination data on maternity patients and results obtained using this method were validated by comparison with 1965 patient origin-destination data. Complete tables and figures are presented to explain this two-way market analysis system for delineating hospital districts. (S.P.)

TRENDS IN PSYCHOGERIATRIC CARE
Political and Economic Planning, 12 Upper Belgrave Street, London, S.W.1, England, 1966
Available in U.S.A. from Committee for Economic Development, 711 5th Avenue, New York, New York for $.75

This paper examines the various approaches to the measurement of frequency of psychiatric illness in old age, considers the principal types of psychogeriatric illness and the parts played by different institutions. It reports on studies of the extent and nature of mental health, on social work carried out with elderly patients and on the impact of psychogeriatric illness on the family. It concludes that Great Britain needs a national policy for old age which considers the psychological and psychiatric aspects of aging as an integral part of the total problem (A.R.N.)

LONG-TERM CARE PROGRAM - ANNUAL REPORT 1967
Tennessee Hospital Education and Research Foundation, Incorporated, 214 Reedhurst Avenue, Nashville, Tennessee 37203, 1967
Available from U.M.I. Xerox $10.75
Film reel #2.07 $ 4.50

First annual report of study made under direction of Tennessee Hospital Association to explore the role of community hospital in long-term care. Report describes organizational steps taken, problem areas to be probed, and programs and projects undertaken. A statistical profile of 179 of the state's 181 licensed long-term care facilities was compiled and is included in the appendix. This profile permits assessment of nurse staffing patterns, medical staff by-laws, patient services available, type of financial records kept, educational background of administrator, and other pertinent data regarding each institution. Report also describes cooperative institute and educational programs between hospitals and long-term care facilities and the organization of training courses for occupational therapy assistants. Plans for future are outlined and include a study or prepayment plans for extended care. Appendices also include copy of proposed patient transfer agreement between hospitals and extended care facilities. (D.F.B.)

Madow, William G.
INTERVIEW DATA ON CHRONIC CONDITIONS COMPARED WITH INFORMATION DERIVED FROM MEDICAL RECORDS
Public Health Service Publication No. 1000, Series 2, No. 23
National Center for Health Statistics, Department of Health, Education and Welfare, Washington, D. C.
Available from Superintendent of Documents, Government Printing Office, Washington, D.C., for $.55

A report prepared by the Stanford Research Institute describing the plan, conduct, and findings of a contract research study designed to measure the accuracy and completeness of the reporting of chronic conditions in a health interview.

The sample population was selected from members of the Kaiser Foundation Health Plan. In the study medical records were compared with responses made in interviews for the same persons as those for whom the records were maintained.

In the interview phase of the study, three alternate forms of a health questionnaire were used. Although the questionnaires were different in several important respects, the overall differences in the reporting of conditions included in the medical records were not large enough to be important.

Findings in the study indicate that respondents in a health interview tend to report conditions that are important to them - i.e., conditions that are severe, costly, or require treatment. Differences in reporting of conditions in the interview were associated with differences in communication between physician and patient. The number and recency of medical visits for a condition were factors closely related to the reporting of conditions. (Author's abstract, adapted)

INSTITUTIONS FOR THE AGED AND CHRONICALLY ILL
Public Health Service publication 1000, Series 12, No. 1
National Center for Health Statistics, Department of Health, Education and Welfare, Washington, D.C.
Available from Superintendent of Documents, Government Printing Office, Washington, D.C., for $.35

In this report institutions for the aged in the United States are described in terms of their admission policies, type of nurse in charge of nursing care, whether or not round-the-clock nursing service is provided, and the amount charged for care of residents. The data are based on a sample survey conducted during the spring of 1963 of nursing homes and related facilities, including chronic disease and geriatric hospitals and all types of homes for the aged.

An estimated 17,100 institutions were classified according to the primary and predominant type of service provided. On this basis about forty-six per cent were classified as nursing care homes and twenty-nine per cent as personal-care-with-nursing homes (personal care was the primary service, but some nursing care was provided). Only four per cent were long-stay hospitals or hospital units for the care of the aged and chronically ill. The remaining twenty-one per cent were homes which routinely provided personal care but not nursing care. (Author's abstract, adapted)

United Community Services of Metropolitan Detroit
HOSPITAL-NURSING HOME DEMONSTRATION PROJECT
United Community Services of Metropolitan Detroit, 51 West Warren Avenue, Detroit, Michigan 48201, under a grant from the Dexter Ferry Jr. Trustee Corporation
Available from Floyd C. Plowman, United Community Services of Metropolitan Detroit, 51 West Warren Avenue, Detroit, Michigan 48201 at no charge

The final report of a demonstration project of nursing home-hospital relationships to test the role of post-hospital nursing home care relative to hospital care, and to test the "validity" of payment for post-hospital nursing home care in that area. Participants included six hospitals and their affiliated nursing homes, the social services departments of Detroit and the three counties, and prepayment and insurance carriers. Data were gathered from histories of 326 patients transferred from hospital to affiliated nursing homes during a twenty-five month period.

The findings showed that patients were maintained in nursing homes for about $14.00 less than in hospital. By using "Joint Advisory Committees" the two types of medical facilities "discovered them could work together in harmony". However, specific problems were noted, particularly in the transfer process, patient selection, and in continuing outpatient care to nursing home patients. (L.E.W.)

EVALUATION OF COMMUNICATIONS MEDIA IN TWO HEALTH PROJECTS IN BALTIMORE
Public Health Reports, Vol. 82, No. 7, July, 1967, pp. 651 - 655
Available from original publisher

Report analyzing effectiveness of communications media in publicizing two health projects points out need for development of the waiting-editing function for public information. In the long-term project, a maternity facility studied over a ten-year period, the greatest source of referrals was person-to-person contact. The short-term project, covering three weeks of advertising, found success due to newspapers, radio and T.V.; in both instances, radio was more effective than T.V. in reaching low-income groups and leaflets, posters, etc. were of little value. (S.P.)

Davis, Donald W.
A STUDY TO DETERMINE THE KNOWLEDGE OF HOSPITAL COSTS OF CERTAIN SELECTED HOSPITAL EMPLOYEES
Program in Hospital Administration, University of Minnesota, Minneapolis, Minnesota, 1967
Available from U.M.I. Xerox $4.05
Film reel #2.08 $4.75

This significance of education, patient contact, length of employment, participation in lectures on hospital costs, and frequency of questioning about hospital costs as related to an employee's knowledge of hospital costs were studied by questionnaire at Rhode Island Hospital. Scores from a group that had no patient contact were compared to those of group who had contact with adult medical and surgical patients. Intervening variables of supervisory position, shift worked, sex, and number of hours worked per week were controlled by selection of the sample. The latter group included full time R.N.'s and nurses aides; the former group consisted of full time R.N.'s, laboratory technologists, and laundry, dietary and housekeeping employees. Analysis of variance was used to measure differences in questionnaire scores. Study found significantly higher scores for nurse group, mainly due to higher scores for nurses aides as compared to laundry, dietary and housekeeping employees. Other variables tested were not shown to significantly affect scores. It is concluded those with patient contact are more knowledgable about costs, but significance of patient contact is not consistent when considered in conjunction with other variables. Copy of questionnaire is in the appendix. (D.F.B.)

THE BEXAR COUNTY HOSPITAL DISTRICT PUBLIC RELATIONS PROGRAM
Baylor University, San Antonio, Texas, 1965
Available on loan from the Asa S. Bacon Memorial Library, American Hospital Association, 840 North Lake Shore Drive, Chicago, Illinois

An evaluation of the 1965 public relations program of the Bexar County (Texas) Hospital District for the purpose of developing specific administrative procedures which would assist the district in meeting its public relations objectives. Information was gathered through: interviews with the Administrator and Director of Information and Communications; tours of the facility; attendance at staff meetings; observations of hospital activities, and review of hospital publications.

Recommendations resulting from the evaluation were: write a comprehensive P.R. program; write a job description of the Director; appoint a P.R. committee; reduce procedural routines into a P.R. manual; develop an annual calendar of events; publish a patients'/visitors' information booklet; inprove bulletin board program; and re-evaluate after one year. EDP IMPLEMENTATION PLANNING STUDY TECHNICAL REPORT
Information Science Associates, 1110 Wynwood Avenue, Cherry Hill, New Jersey, 1966
Available from U.M.I. Xerox $9.95
Film reel #2.08 $4.75

A study made November 1965 - April 1966 "to explore, identify, measure and organize the significant factors pertinent to the development of an EDP implementation plan" for thirteen area hospitals and five health agencies of metropolitan Indianapolis. The prime application area to be investigated was the information processing of physicians' orders and the maintenance of patients' financial and clinical records "and subsequent activities these generate". The objectives of the study were: to define the scope of the implementation job; estimate the type and quantity of manpower needed; solicit proposals from equipment suppliers; develop implementation schedules; make budgets; develop method of allocating costs among users; and seek and maintain community involvement.

The estimated commencement of operation was the beginning of 1968, with full on-line operation with 331 remote terminals in use in eleven hospitals and five agencies by 1971. The initial equipment planned for 1968 is an IBM 360/40 with high speed storage capacity of 131,000 bytes to be upgraded and added to by 1971 to the level of an IBM 360/40 with 262,000 bytes storage and an IBM 360/50 with 262,000 bytes storage with random access capacity of 207 million bytes (which can also be accessed by the 260/40) and a fast drum capable of storing 3.96 million bytes. The peak of employment of staff would be 79 in 1968 which should level off to 70 in 1971

The system would be operated on a fees-for-service basis with estimates that it would be self-supporting soon after 1971. In the meantime (through 1971) there would be accumulated costs of $9.4 million of which $3.66 million support would be needed. The cost estimates of the first year of full operation (1971) would be $2.44 million. See DA0014, Vol. III, for earlier report on project. (L.E.W.)

Greenes, Robert A.; Barnett, G. Octo
GUIDE: A PROGRAMMING LANGUAGE FOR THE STRUCTURE OF DATA-DIRECTED COMMUNICATION
NIH Grant No. FR00263
Laboratory of Computer Science, Massachusetts General Hospital, Boston, Massachusetts
Available from U.M.I. Xerox $3.00
Film reel #2.08 $4.75

Use of the computer in an interactive problem-solving environment tends to depend upon sequential decision-making methods. Information on which decisions are to be based is typically obtained only when it is needed, and its nature and the context in which it is obtained function to determine the particular decision that is appropriate to it. The resultant effect of data-directed communication depends, for its success upon the ability of the subject matter expert to provide an appropriate decision structure for the circumstance. A programming language, GUIDE, is described, which has been developed as a high-level idiom for the design of such a decision structure. Several classes of situations which can benefit from its use are described. (Authors' Abstract)

Computers and Biomedical Research, Vol. 1, No. 1 1967, pp. 51-61
Available from Academic Press, Inc., 111 5th Avenue, New York, New York 10003

An experimental, time-sharing, remote-access computer system is being developed as part of a research project in the use of automatic data-processing techniques in patient-care procedures in the Massachusetts General Hospital. Programs have been designed that allow a user on a patient-care unit to order medications, retrieve laboratory test results, admit and discharge patients, etc. These programs are still in an experimental phase and duplicate the present hospital function. Summarizes project. Other more detailed reports from this group appear in Data Processing classification (DA), Volumes I, II and III. See also DA4006. (Editor's Abstract, Adapted)

VICTORIA GENERAL HOSPITAL COMPUTER PROJECT - PROGRESS REPORT NO. 3 AND PROGRESS REPORT NO. 3 APPENDICES (Two Volumes)
University of Manitoba, Winnipeg, Manitoba, Canada
Available from U.M.I. Xerox $11.10
Film reel #2.09 $ 4.75

A progress report of the computerized information system being designed for the new Victoria General Hospital. The completion of the new hospital was delayed but a prototype ward in the old hospital was established for the hospital computer system. The computer facilities of nearby University of Manitoba are being used. The report describes the development work with doctor's orders, progress notes, an admission system, data retrieval from patients records, the supply system, a drug system, and a laboratory system. The appendices (Volume II) contain the flow sheets, and data forms used in the development to the several units making up the information system. See also DA0012, Volume III. (L.E.W.)

DECISION-MAKING IN HOSPITAL PLANNING AND DESIGN
Graduate Program in Hospital Administration, School of Public Health, University of California, Berkeley, California, 1967
Available from U.M.I. Xerox $3.00
Film reel #2.10 $4.25

Author attempts "to demonstrate that decisions concerning hospital planning and design are often made at a lower (organizational) level than generally supposed . . ." Decisions concerning an addition to a hospital were traced by searching minutes of committee and Board of Trustees meetings, correspondence and planning files. The groups involved were then asked to rate importance of these decisions. The author concluded that results of study tend to support theory that decisions are made at lower level than supposed. Role of administration was greater than supposed; role of nursing less than "to be desired". Unclear whether increased participation will lead to more "acceptable results", but author suggests participation might increase "readiness of subordinates to accept results." (H.M.)

AN EVALUATION OF THE DIETARY DEPARTMENT, BAPTIST MEMORIAL HOSPITAL, SAN ANTONIO, TEXAS
Baylor University, San Antonio, Texas 1965
Available on loan from the Asa S. Bacon Memorial Library, The American Hospital Association, 840 North Lake Shore Drive, Chicago, Illinois

An evaluation of the dietary department made during a six month period of 1964 using criteria established by the American Dietetic Association. The areas of investigation included: the organizational structure of the department; the food service; personnel policies; and possible ongoing study and analysis of the department. The evaluation was made through: observation of department operations; review of hospital policies, records, and reports; data gathered from patient satisfaction questionnaires; and through interviews. A COMPARISON OF UNIT KITCHEN DIETARY ACTIVITIES BEFORE AND AFTER THE IMPLEMENTATION OF A FIVE MEALS PER DAY PROGRAM
Program in Hospital Administration, University of Minnesota, Minneapolis, Minnesota, 1967
Available from U.M.I. Xerox $5.45
Film reel #2.10 $4.25

Implementation of a five meals per day program on two units of the University of Alabama Hospital was evaluated and compared with findings from a 1964 Unit Kitchen Activity Survey when study hospital was on the traditional program of three meals per day with two snack times. Hospital used a centralized preparation system and a decentralized service and distribution system. Data were collected by twenty-six trained observers using the fixed-interval sampling technique over an eight day period. Findings indicate significant increase in direct and indirect work activity and a significant decrease in delay time when utilizing the five meals per day program. Further analysis shows direct work increased chiefly due to an increase in production and processing (mainly due to increase of tray assembly activities). A reduction in delay time was due chiefly to a decrease in idle time. Further research to measure the efficiency of the five meal program under a different food service system is recommended. (D.F.B.)

VOLUNTARY HEALTH-RELATED BEHAVIOUR IN WHEATVILLE
Canadian Journal of Public Health, Vol. 58, No. 3, March, 1967, pp. 109-116
Available from original publisher

Data were gathered in 1965 in "Wheatville", Saskatchewan to determine the extent of voluntary health-related behavior in 105 heads of family (23 per cent sample) by personal interviews. The behavior was defined as: altruistic-support of community health services; independent-self medication; and dependent-use of non-medical personnel. An attempt was made to relate behavior to social class using the chi-square statistic to identify significant relationships. The altruistic behavior factor was found difficult to measure and unreliable because financial contributions as a variable could not be checked, and the behavior was believed to be influenced by attitudes toward the 1962 physicians' "withdrawal". Upper class families were found to have more means of self-medication, and contacted a larger number of different non-medical personnel than the lower classes. (L.E.W)

Begin, Joseph L.
UTILIZATION REVIEW: APPLICABILITY AND IMPLICATION AT AN AIR FORCE HOSPITAL
Program in Hospital Administration, The University of Michigan, Ann Arbor, Michigan 48108, 1967
Available from U.M.I. Xerox $4.10
Film reel #2.11 $4.25

The purpose of this study is to determine the problems and implications resulting from a utilization study in a military hospital, the feasibility and practicality of employing the criteria method of utilization review and the appropriateness and effectiveness of the use of services at an Air Force Hospital for one diagnosis. The mechanics for utilization review were established at this hospital for the study and one diagnosis, bronchial pneumonia, was selected for analysis. The criteria method for review of utilization was applied. A utilization committee of physicians at the hospital, formed for this study, selected the criteria. Five hundred thirty four medical records were reviewed. Information is presented regarding admission evaluation, diagnostic procedure evaluation, and length of stay evaluation. Author concludes that the criteria method of utilization review is an effective tool for measuring the appropriateness of services in the military hospital. It is flexible and can be applied to the changing condition of the service population. (S.F.L.)

A MONTH OF ILLNESS AND HEALTH CARE AMONG LOW-INCOME FAMILIES
Public Health Reports, Vol. 82, No. 8, August, 1967, pp. 705-713
Available from original publisher

An investigation to determine the value of the family as a meaningful unit of health behavior was based on extensive analysis of health calendars kept by seventy-eight families during a summer month. Subjects were of low income, with no family physician; they were asked to record symptoms, action taken, and also upsetting events. Results showed that only one symptom in eight was brought to medical attention and that the family is a meaningful unit which has characteristic patterns in health maintenance. (S.P.)

Zulkowski, Edward
A COMPARATIVE STUDY OF THE EFFECT OF MEDICARE ON THE UTILIZATION OF CERTAIN HOSPITAL SERVICES AND FACILITIES BY SPECIFIC PATIENT GROUPS
Program in Hospital Administration, University of Minnesota, Minneapolis, Minnesota, 1967
Available from U.M.I. Xerox $5.55
Film reel #2.12 $6.25

The effect of Medicare on utilization of laboratory and diagnostic radiologic procedures and length of stay was studied at Baptist Memorial Hospital, Tennessee. Two groups of patients age 65 and over were studied: one group had been hospitalized during the five months prior to Medicare; the other group was Medicare patients. Each group was matched for medical diagnosis, sex and approximate age. Two control groups for the same time periods were also studied, composed of patients between 40 and 64 years and also matched for same factors. Diagnoses used in study were myocardial infarction, cholelithiasis and hyperplasia of the prostate. Weighted units were used to measure utilization of laboratory and radiological procedures. Subgroups of patients were analyzed for factors relating to patient's income, social status and education and physician's specialty and years of practice. Some of the major findings are: (1) Medicare study patients show increases in all elements of utilization while control groups show slight decreases. (2) Lower income and lower status patients were responsible for the increase in utilization. (3) Medicare patients with less education tend to show increased length of stay and use of laboratory tests. (4) Physicians with more than 21 years of practice tend to order more tests and have Medicare patients staying longer than they did for similar patients prior to Medicare. (5) A clear majority of both patients 40 to 64 and over, 65 per cent felt Medicare coverage was "not enough". (D.F.B.)

Vinluan, Dominador C.
A STUDY OF DAY OF THE WEEK AND TWO OTHER VARIABLES AFFECTING LENGTH OF PATIENT STAY
Program in Hospital Administration, University of Minnesota, Minneapolis, Minnesota, 1967
Available from U.M.I. Xerox $4.90
Film reel #2.12 $6.25

Lengths of stay for medical and surgical patients of St. Luke's Hospital, Duluth, Minnesota discharged from July 1, 1966 to December 31, 1966 were analyzed, using factors of age, sex, day of the week of admission, and day of the week of discharge. Analysis of variance was used for testing statistical significance of the data, at .05 level of significance. The major findings from the study are: (1) average length of stay is longer for patients age 65 and over than those under 65. (2) Average length of stay is longer for male patients than females. (3) For combined medical and surgical patients those admitted on Saturday stay longest. (4) Surgical patients admitted Friday and Saturday have significantly longer stays than those admitted Sunday through Thursday. (5) Pediatric surgical patients admitted Friday have significantly longer stays than those admitted the other days of the week. (6) Average length of stay for all patients does not vary significantly by day of the week of discharge. (D.F.B.)

Thompson, John D.; Fetter, Robert B.
THE APPLICATION OF SIMULATION TO HOSPITAL PLANNING
Proceedings on Simulation in Business and Public Health, pp. 205-209, First Annual Conference of American Statistical Association and Public Health Association of New York City 1966
Available from the American Statistical Association, c/o Miss Natalie Colabro, Look Magazine, 488 Madison Avenue, New York, New York for $4.95

The authors review the limitations of the Poisson process models, contend that they are inadequate as indicators of obstetrical bed needs and suggest substitution of a simulation model. Using simulation studies based upon data from the maternity and gynecological subsystems at Yale University as an example they conclude that simulation could make a valuable contribution to hospital planning as a predictor of bed needs and in providing for those needs efficiently and economically. Schlenker, Kenneth W.
A COMPARISON OF OBSTETRIC AND PEDIATRIC UTILIZATION OF SUBURBAN VERSUS DOWNTOWN HOSPITALS IN METROPOLITAN MINNEAPOLIS OVER A PERIOD OF FIVE YEARS
Program in Hospital Administration, University of Minnesota, Minneapolis, Minnesota, 1967
Available from U.M.I. Xerox $3.00
Film reel #2.12 $6.25

Utilization of obstetrical and pediatric services was compared for a downtown hospital and a suburban hospital for years of 1961 through 1965 to determine if there is a direct relationship between hospital location for both physician and patient utilization of services. Previous utilization studies related to location are summarized. Data were obtained from medical records and a questionnaire mailed to physicians who had admitted at least sixty pediatric patients or attended sixty or more live birth during study period. Physicians were asked to rank factors in order of importance in choosing a hospital facility and to indicate if they have changed hospital affiliation and if so, why. Findings indicate for total inpatient admissions and pediatric service utilization, location of suburban hospital was a significant factor affecting utilization. This was not true of obstetrical services utilization, however, and possible reasons are discussed. Physicians' response to factor ranking indicate significant degree of agreement, with convenient location ranked third. Thirty-one of forty physicians who changed hospitals, however, gave location as reason. (D.F.B.)

ADMISSION AND LENGTH-OF-STAY CHANGES OCCURRING IN THE AGE 65 AND OVER INPATIENT POPULATION OF A UNIVERSITY TEACHING HOSPITAL AFTER THE BEGINNING OF MEDICARE
Program in Hospital Administration, University of Minnesota, Minneapolis, Minnesota
Available from U.M.I. Xerox $4.50
Film reel #2.12 $6.25

A study conducted at the University of Minnesota Hospital, a teaching hospital, of the admissions and length-of-stay of patients 65 years of age and over before and after the beginning of Medicare. Admission studies were made for July through December, 1964, 1965, 1966. Length-of-stay studies were made of patients discharged in August and November of 1965 and 1966. In general changes noted were slight or insignificant. (L.E.W.)

UTILIZATION OF SHORT-STAY HOSPITALS - SUMMARY OF NONMEDICAL STATISTICS
National Center for Health Statistics, Department of Health, Education and Welfare, Washington, D. C.
Available from the Superintendent of Documents, Government Printing Office, Washington, D.C. for $.25

Statistics are presented on the utilization of short-stay hospitals based on data abstracted by the Hospital Discharge Survey from hospital records for a national sample of discharged patients. Discharges, days of care, and average length of stay are distributed by each of the following variables: age, sex, marital status, color, and discharge status of the patient; and ownership, size, and geographic area of the hospital. Bed occupancy rates are distributed by selected characteristics of the hospital. (Author's Abstract)

A SIMULATION STUDY OF ALTERNATIVE MEDICAL SUPPORT SYSTEMS FOR MASS DISASTER CASUALTIES
Research Triangle Institute, Research Triangle Park, North Carolina, 1967
Available from Professor John L. Colley, Jr., Graduate School of Business Administration, University of Virginia, Charlottesville, Virginia 22903 for no charge

Reports on a computer simulation model designed to estimate effectiveness of alternative medical support systems for atomic attack in the immediate post attack period. Effectiveness is measured by number of survivors resulting from the emergency medical system. In formulating model, all essential elements of an emergency support system are described. Inputs are various casualty types who are to be treated by medical resources - personnel, facilities and supplies - according to rules of triage, i.e. treatment priorities. Output is number of survivors. Probability of death is a function both of kind of treatment employed and time delay before treatment. In test runs, quantity of supplies and personnel were varied. In later runs additional factors of different casualty spectra resulting from a warned versus an unwarned population and attack from air burst and surface burst were included. Analysis of upper and lower bounds of medical support system performance was made by varying factors studied with maximum resources and with zero resources. It is concluded model is a flexible tool for study of the operation of an emergency medical support system in the immediate post attack period and possible applications of model for other communities and on a national level are described. A REINTERPRETATION OF HOSPITAL COST ANALYSES
Welfare and Social Security Administration Grant No. 300
Human Resources Research Center, University of Southern California, Los Angeles, California 90007
Available from U.M.I. Xerox $3.00
Film reel #2.13 $4.75

This paper presents a reexamination of three major hospital cost studies (Ingbar; Carr; P. Feldstein and M. Feldstein) and attempts to reconcile apparently conflicting results obtained by these investigations. One found constant returns to scale (no decrease in unit costs as hospital size increases), the second a classical U-shaped cost curve, and the third decreasing unit costs up to well beyond the observed range of hospital size. It is concluded that these studies are not as inconsistent as they might appear, and differ mainly in the modesl used, but suggestion is made that the issues will remain unsolved until a consistent and definitive cost model has been developed. The cost theory developed by Alchian and Hershlifer, which contains the concepts of rate of production and volume of production, is suggested as one which offers promise. (G.C.W.)

THE COSTS OF PROVIDING LONG-TERM INPATIENT CARE: AN ECONOMETRIC STUDY
Research Grant No. 300 from Welfare and Social Security Administration
Human Resources Research Center, Research Institute for Business and Economics, Graduate School of Business Administration, The University of Southern California, Los Angeles, California 90007, 1967
Available from U.M.I. Xerox $3.00
Film reel #2.13 $4.75

Progress report of a study of costs of operating general long-term inpatient facilities. Part I discusses economic theory of cost and problems relating to its empirical application as a framework for assessing assumptions and techniques of previous statistical analyses of hospital costs. Part II reviews and evaluates statistical techniques followed in four major studies of hospital cost functions: Martin Feldstein's "Economic Analysis for Health Service Efficiency"; John Carr and Paul Feldstein's "The Relationship of Cost to Hospital Size"; Gottlieb, Fitzpatrick and Wirick's "Nature of Hospital Cost"; and Ingbar's "Statistical Study of Differences in Hospital Costs". In Part III, authors offer their own econometric model of long-term inpatient costs, using multivariate regression technique, where rate of output is number of cases treated per year and volume is annual occupied bed days. Individual cost-output relations for various types of long-term institutions will be examined by testing three basic equations: a "naive" linear formulation, and curvilinear specifications of both "classical" and "rate-volume" models. Applicability of equations used for "classical" and "rate-volume" models is demonstrated and explained. The other stages of the study to be completed involve surveying, collecting and compiling data in the Los Angeles area for regression analysis in the form specified by the model. (D.F.B.)

FAMILY HEALTH EXPENSES
Public Health Publication No. 1000, Series 10, No. 41
National Center for Health Statistics, U.S. Department of Health, Education and Welfare, Washington, D.C. 20204, 1967
Available from Superintendent of Documents, Government Printing Office, Washington, D.C. for $.30

Statistics on the average annual cost of personal health expenses per family and per unrelated individual. Information on health expenses type of expenditure: hospital care, doctor care, dental care, medicines, and special and other health expenses. Information on 47 million families in the civilian, non-institutional population is classified by size of family, whether husband - wife family or other family group, and by age of head of the family. Information on 10.8 million unrelated individuals is classified by age, sex, and whether living alone or with nonrelatives. These data were collected by self-enumeration, employing mail-in questionnaires left with the respondents of health interviews conducted during July - December, 1962.

Annual health expenses per family or unrelated individual are shown by geographic region, color, family income, and education of head of the family. (Author)

A STATISTICAL STUDY OF FACTORS AFFECTING THE UNIT COST OF SHORT-TERM HOSPITAL CARE
Yale University, New Haven, Connecticut, 1966
Available from U.M.I., document no. 66-14,990
Xerox $11.25
Film reel $ 3.20

A study of short-term hospital care costs from which the following generalizations were made by the author:

1. Economies of scale exist in hospital operations.
2. The higher a hospital's occupancy rate, the lower its unit cost.
3. Hospitals which have a higher proportion of patient care expense to hotel-type services expense have a higher unit cost.
4. As each hospital employee provides more days of inpatient services to more patients per year, the unit cost becomes lower.
5. Hospitals which have accredited professional nursing schools have higher unit costs.
6. There is no significant difference in unit cost between hospitals with approved intern and/or residency programs and those without.
7. Hospitals in areas with higher percentages of urban population have a higher unit cost than those in areas with lower percentages of urban population.
8. Inter-hospital and inter-year differences in unit cost are better explained by multiplicative model than by a linear model. (L.E.W.)

THE MOTIVATION TO WORK IN HOSPITAL HOUSEKEEPING WORKERS
Western Reserve University, Cleveland, Ohio, 1965
Available from U.M.I., document no. 66-5191
Xerox $4.80
Film reel $3.00

A replication of a study which Herzberg did of engineers and accountants to explore hypotheses that job satisfaction and dissatisfaction have their sources in different sets of factors. The author attempted to determine whether results of

original study also applied to "low-level, unskilled" workers. Subjects were 119 housekeeping workers of two V.A. hospitals in Cleveland area.

Data were collected from semi-structured interviews modelled after the Herzberg study, and content analyzed by the same method.

The three factors which appeared most often as "satisfiers" were: recognition; advancement; and responsibility. The "dissatisfiers" were most frequently: company policy and administration; wages; supervision-technical; working conditions; and interpersonal relations-peers. The author concluded results were in good agreement with the original study, and that neither the level of work nor race of the worker "acted to introduce major changes from the original results". A STUDY TO EVALUATE TWO HOUSEKEEPING METHODS OF CLEANING OPERATING ROOM FLOORS BETWEEN SURGICAL CASES IN RELATION TO BACTERIAL COUNT REDUCTION AND TIME INVOLVED
Program In Hospital Administration, University of Minnesota, Minneapolis, Minnesota, 1967
Available from U.M.I. Xerox $3.00
Film reel #2.13 $4.75

This study compared Mikro-Spray Method of cleaning an operating room floor between surgical cases with Mopping Method at St. Mary's Hospital, Minnesota. Four procedures were evaluated for effectiveness in reducing bacterial count and time involved; Mikro-Spray with mop pick-up; double-mopping method; Mikro-Spray with wet vacuum pick-up; and single mopping method. Operating floor was divided into two equal sections which were subdivided into squares. A random sample of forty squares was drawn for sampling before and after an operative case for each of cleaning procedures tested. Ten squares on one side of the floor were cleaned with a Mikro-Spray procedure before and after surgery and ten squares on the other side were cleaned with mopping method. The next day the other Mikro-Spray method and mopping method were tested, reversing the sides of the room they were used on. Rodac agar plates were used for surface sampling and some germicide was used for entire experiment. Study found no significant difference in bacterial reduction between Mikro-Spray with mop pick-up or wet vacuum pick-up and double-mopping method. Single mopping was significantly not as effective in reducing bacterial count. Single mopping and Mikro-Spray with mop pick-up were fastest procedures and Mikro-Spray with mop pick-up is therefore recommended for speed and effectiveness in reducing bacterial count. (D.F.B.)

Myers, Robert J.; Baughman, Charles B.
HISTORY OF COST ESTIMATES FOR HOSPITAL INSURANCE
Office of the Actuary, Social Security Administration, U.S. Department of Health, Education and Welfare, Washington, D.C., 1966
Available from original publisher

Traces the development of cost estimates for various Federal legislative proposals which provided hospital insurance benefits to persons 65 and over, beginning with 1952 proposals and culminating with Medicare legislation. Included is a summary of provisions and benefits of Medicare Act 89-97. Basic assumptions about earnings base and trends of hospitalization costs and earnings that underlie cost estimates of various legislative proposals are detiled. Included is a summary of development of these assumptions and reasons for changing them at different stages.

Initially, the assumption was made that covered earnings rate and average per diem costs would remain static and values and benefits were calculated for period of perpetuity. Since then there have been several major changes. At present, long-range costs are computed for a twenty-five year period on a dynamic basis, but assuming no change in earnings base. A 10 per cent safety margin has also been added to utilization rates. (D.F.B.)

Gipson, Bobby Ralph
THE IMPACT OF TITLE XVIII (MEDICARE) ON THE BUSINESS OFFICE OF A SMALL, COMMUNITY GENERAL HOSPITAL
School of Health Services Administration, University of Alabama, Birmingham, Alabama, 1967
Available from U.M.I. Xerox $3.00
Film reel #2.13 $4.75

A work sampling study was made to determine impact of Medicare on business office activities of a small Alabama hospital. In addition, business office costs related to Medicare processing are analyzed and a comparison of time spend on Medicare processing to percentage of income from the program is presented. Data indicate Medicare patients constituted only 14.3 per cent of total patients, but Medicare-related processing of their admissions and discharges took 56 per cent of total time spent in this function. Primary cause was due to law's requirement that hospital and physician charges be billed separately on different forms for each service performed. In addition, Blue Cross required all Alabama hospitals to keep a medical journal in which identical information is transcribed by hand - a procedure considered redundant by this study. Data also show Medicare outpatients compose only 4 per cent of total outpatients, but processing of their records took 28 per cent of total time. Cost of processing Medicare records for eight months of program's operation was approximately $2,200 more than would be expected, based on per cent of Medicare patient to total patients. Income from Medicare patients was 22 per cent of total, while time spent in processing records was over 25 per cent. It is concluded reimbursement formulas do not adequately reimburse hospitals for clerical and accounting costs. (D.F.B.)

Schumacher, Joseph L.
AN ANALYSIS OF MEDICARE'S IMPACT ON KANSAS UNIVERSITY MEDICAL CENTER AS IT AFFECTS THE TOTAL NUMBER OF DISCHARGED INPATIENTS, AGE 65 AND OVER, THE TYPE OF PATIENT CARED FOR, AGE 65 AND OVER, AND THE FINANCIAL RELATIONSHIP BETWEEN THE HOSPITAL AND THE PATIENT, AGE 65 AND OVER
Program in Hospital Administration, University of Minnesota, Minneapolis, Minnesota, 1967
Available from U.M.I. Xerox $7.15
Film reel #2.13 $4.75

The effect of Medicare on the number of patients admitted, age 65 and over, their primary discharge diagnoses, length of stay, operative procedures and financial category was studied in a sample number of patients admitted to University of Kansas Medical Center. Patients admitted during July through September, 1965 (before Medicare) were compared to those admitted July through September, 1966. Impact of Medicare on gross hospital charges collected and how they are allocated among financial resources was also studied. Except for increase in number of patients whose primary discharge diagnoses were coded to cardiovascular system, there were no significant differences in numbers, type of patients, age 65 and over, and length of their stays after Medicare became effective. Study found substantial difference (12.65 per cent increase) in percentage of gross charges collected since implementation of Medicare. Data indicate 88.62 per cent of gross charges were collected from Medicare, Parts A and B, for study period in 1966. (D.F.B.)

Hill, Roland R.
A STUDY OF THE IMPACT OF MEDICARE, TITLE XVIII, PUBLIC LAW 89-97, ON DIRECT ADMISSION OF PATIENTS TO THE MINNEAPOLIS VETERANS ADMINISTRATION HOSPITAL
Program in Hospital Administration, University of Minnesota, Minneapolis, Minnesota, 1967
Available from U.M.I. Xerox $4.45
Film reel #2.14 $4.00

Admissions of all patients age 65 and over to a V. A. Hospital occurring the last six months of 1965 were compared to those for July through December, 1966 when Medicare Act was in effect. Comparisons were made for factors of diagnosis, area of residence, pensioned or nonpensioned, and service-connected disability. Data were obtained from medical records and questionnaire survey of County Veterans Service Officers. Findings show Medicare Act has significantly reduced number of

48

patients age 65 and over admitted to Minneapolis V. A. Hospital since July 1, 1966. While non-pensioned patient utilization showed little variance, there was a 25 per cent reduction in admissions of pensioned patients. Medicare had no effect on admission rates of those with catastrophic, long-term or terminal illness, and it is concluded voluntary system is unprepared or unwilling to care for these types of illnesses. Study also shows those living within a fifty mile radius of V. A. Hospital are more apt to seek medical care in voluntary system than those living more than fifty miles away. (D.F.B.)

Scheibe, Robert G.
A STUDY OF THE LENGTH OF STAY OF PATIENTS OVER AGE 65 YEARS AND CERTAIN RELATED FACTORS
Program in Hospital Administration, University of Minnesota, Minneapolis, Minnesota, 1967
Available from U.M.I. Xerox $3.00
Film reel #2.14 $4.00

Length of stay and discharge rate were analyzed for patients age 65 and over who were admitted during the last six months of 1965 and 1966 at Memorial Hospital, South Bend, Indiana. Six hundred cases each period were matched for age, sex and clinical service. Study hypothesized length of stay would increase after Medicare became effective July 1, 1966 and there would be greater utilization of facilities by patients age 65 and over. Data show patients age 65 and over who were admitted after July 1, 1966 tend to stay longer on average than those admitted prior to that date. Also a 6 per cent increase in utilization occurred after July 1, 1966. Study found women tend to stay longer than men with similar diagnoses. Diagnoses included cholelithiasis, malignant neoplasms, hyperplasia of prostate and cataracts all of which showed increased average stay. Study also shows an increase in number of female discharges for 1966 over 1965. The number of surgical procedures did not increase. (D.F.B.)

Penn, Robert F.
A STUDY OF THE IMPACT OF MEDICARE (PUBLIC LAW 89-97) ON THE AVERAGE LENGTH OF AGED PATIENT STAY RELATIVE TO CERTAIN SELECT AREAS
Program in Hospital Administration, University of Minnesota, Minneapolis, Minnesota, 1967
Available from U.M.I. Xerox $4.25
Film reel #2.14 $4.00

Effect of Medicare on length of stay of medical - surgical patients, age 65 and over, was studied at a short-term, 310 bed, voluntary hospital in Kentucky. Data from patients, discharged during last six months of 1965 were compared to those discharged the last six months of 1966. Analysis of length of stay by age, sex, medical-surgical service classification, date of death, distance of residence from hospital, and medical-surgical consultations is presented. Study found overall average length of stay increased under Medicare by 1.9 days. Females stayed longer than males, but since Medicare, males are closing the gap. Data also indicate those residing farthest from the hospital tend to stay longer. Analysis by twelve medical - surgical classifications indicates average length of stay increased in all groups except for general surgery and gynecology. Appendices include data on length of stay, per cent of occupancy and monthly discharges of sample used in the study. (D.F.B.)

Arthur Young and Company
A STUDY OF THE FINANCIAL EFFECTS OF MEDICARE ON CALIFORNIA HOSPITALS
Arthur Young and Company, 120 Montgomery St., San Francisco, California 94104, 1967
Not generally available. Questions should be addressed to California Hospital Association, 111 Pine Street, San Francisco, California 94111

Data for this study were requested from 168 general, acute, short-term California hospitals, representing a cross-section of ownership and size, with 48 per cent responding fully. Study estimated effect Medicare would have had on hospital revenues for the last fiscal year prior to the commencement of Medicare program. Estimates were made by applying Medicare reimbursement formula to actual revenues and costs, together with estimates of departmental revenues attributable to patients of Medicare age. Study found 51 of 78 respondents of California hospitals will be reimbursed 18 per cent less than hospital charges, 9 per cent less than the realistic cost of caring for Medicare patients, and 4 per cent less than related amounts historically collected. RCC (ratio cost to charges) was principal factor in reduction. It is concluded reduction in revenues of many hospitals adversely affected by Medicare will seriously impair their ability to maintain and expand existing care facilities. Study recommends changes in the law which provide for depreciation on basis of replacement values in order to insure equitable and equal treatment of all hospitals and to preserve present capital investment. (D.F.B.)

THE IMPACT OF MEDICARE IN WHEATVILLE, SASKATCHEWAN, 1960-1965
Canadian Journal of Public Health, March, 1967, Vol. 58, No. 3, pp. 101-107
Available from original publisher

A survey was conducted in 1965 by interviewing 23 per cent of the heads of households of "Wheatville" to measure effects of Medicare (Saskatchewan style) in comparison to data gathered in 1960 survey, two years before initiation of program. Rates of hospitalization in Saskatchewan have dropped since introduction of Medicare (95 per cent of episodes of illness are treated by doctors outside of hospital). The pattern of admissions by diagnosis had changed. Respondents believed health of population had improved, particularly for those "on the edge of poverty", that doctors were busier than before. Data showed utilization of doctors was up both in number of contacts with patients and by percentage of population, with a greater referral of patients to specialists by G.P.'s. (L.E.W.)

MUNICIPAL GENERAL HOSPITAL OUTPATIENT POPULATION STUDY: SOCIAL AND ECONOMIC CHARACTERISTICS OF PATIENTS IN NEW YORK CITY OUTPATIENT DEPARTMENTS, 1965: FINANCIAL ELIGIBILITY UNDER MEDICAID AND POTENTIAL REIMBURSEMENT TO THE CITY, REPORT NUMBER 1
Health Research Council Grant of the City of New York U1040
School of Public Health and Administrative Medicine, Columbia University, New York, New York 1967
Available from U.M.I. Xerox $3.15
Film reel #2.14 $4.00

Randomly selected patients (2,648) of fifteen New York City municipal hospital outpatients were interviewed during late 1964 through 1965 to determine financial eligibility of patients for free care by retroactively applying New York State Medicaid provisions. Data on family income, family composition, welfare status, and medical costs were analyzed for each respondent. "Approximately 93 per cent of the sample could be considered as qualifying for eligibility under Medicaid, had its provisions been in effect during the sample year."

Estimation was made of a "one-year total amount of potential reimbursement to New York City for clinic care provided to patients who would have been eligible without any deductible payment, had Medicaid been in effect." The estimated potential for annual reimbursement was computed as about $14,000,000 (based on $8.00 cost per visit) with about 76 per cent derived from Federal-State program (at rate $.75 per $1.00) and 24 per cent from State only program ($.50 per $1.00) (L.E.W.)

National Council on Medical Technology Education
NATIONAL CORRELATIONS IN MEDICAL TECHNOLOGY EDUCATION - A REPORT OF A STUDY OF MEDICAL TECHNOLOGISTS
U.S.P.H.S. Grant No. 5514-C-67
National Council on Medical Technology Education, 1025 E. H. Crump Boulevard, Memphis, Tennessee, 38104, 1967
Available from original publisher

A report of a study to weigh medical technology education and certification against job performance. A sample (approximately 10 per cent) of the 1861 technologists who filed for the 1962 certification examination was studied. Data were gathered in various ways to determine possible correlation: by questionnaire from technologists for information about work experience; from records of the technologists' educational preparation and certification; job performance as seen by immediate supervisors; and information about the supervisors themselves. Correlations were established between education and job performance, although other factors were also found important. The findings were to be used as a basis for recommendations for strengthening the educational program. Extensive tabulations of data are given in the report and specimens of questionnaires included in appendix. (L.E.W.)

A STUDY OF LINEN UTILIZATION AT PARKVIEW MEMORIAL HOSPITAL
Graduate Program in Hospital Administration, Xavier University, Cincinnati, Ohio, 1966
Available from U.M.I. Xerox $4.60
Film reel #2.15 $4.75

A study of linen utilization at Parkview Memorial Hospital, Indiana, was undertaken to determine reasons for increasing expenses, excessive use and a chronic problem of linen loss. Procedures of each department of the hospital in acquiring clean linen and disposing of soiled were studied, including an analysis of the laundry department. Where applicable, patient characteristics and patient load are described as they affect linen utilization. Study found there were no formal controls on linen procurement and usage. Generally, inventories were not taken or supply levels for each area established. Some soiled linen was disposed of loosely down a laundry chute from various areas in the hospital. Cultures taken of air in laundry chute collection room indicate a high concentration of various types of bacteria colonies. Recommendations are made concerning establishing supply levels, formal distribution system, soiled linen handling, new linen procurement, inventory procedures, and laundry management. It is concluded unexplained loss of linen is due to theft which could be remedied in part by a formal distribution system. (D.F.B.)

CHEMICAL DISINFECTION OF HOSPITAL WOOLAN BLANKETS IN LAUNDERING
Journal of Applied Bacteriology, Vol. 29, No. 2, pp. 375-364, 1966
Available from Society of Applied Bacteriology, Academic Press, 111 5th Avenue, New York 10003 for $20.00 per year to non-members of the Society

Three laundry disinfecting processes for woollen blankets were tested in a hospital laundry against total bacteria. Results were somewhat indefinite owing to a low general level of infection and the incidence of slight recontamination during drying. Before drying, disinfection was demonstrated. Laboratory simulated launderings on pieces of blanket infected with Pseudomonas pyocyanea showed significant differences between the processes. (Editor's Abstract)

Whalen, John
A PILOT STUDY OF LEADERSHIP ATTITUDES IN A MEDICAL SCHOOL'S DEPARTMENTS OF MEDICINE AND SURGERY
Program in Hospital Administration, University of Minnesota, Minneapolis, Minnesota, 1967
Available from U.M.I. Xerox $3.50
Film reel #2.12 $4.75

Leadership attitudes of academic and house staff physicians in departments of medicine and surgery at University of Florida College of Medicine were studied using Leadership Opinion Questionnaire to collect data. Physicians were classified according to specialty, staff appointment, staff-specialty, affiliation and academic rank. Twelve groups were formed from these classifications and summary descriptive statistics are computed and presented for each group. The effects of group membership were analyzed for only eight of the groups, composed of staff-specialty and combined academic rank groups. Findings indicate leadership attitudes of academic and house staff physicians in departments of medicine and surgery are homogeneous. It was also shown that similar leadership attitude patterns prevail in hierarchies of the medical school's departments of medicine and surgery. Replication of study in other regions is recommended to determine significance of "climate" as a variable affecting development of leadership attitudes. (D.F.B.)

INTERNS AND RESIDENTS IN TWO HOSPITAL LEARNING ENVIRONMENTS: A COMPARATIVE STUDY
Columbia University, New York, New York, 1963
Available from U.M.I., document No. 65-7465
Xerox $21.40
Film reel $ 6.00

This is a qualitative study of interns and residents in a large, university-affiliated hospital and in a small, nonaffiliated community hospital. It focuses on the influence of the structure and culture of the two organizations upon the reference-group behavior of interns and residents recruited by them.

The investigation distinguishes between two types of reference-group behavior. First, behavior related to the recruit's comparison of his situation with that of people in groups, categories and statuses is considered. Second, behavior that relates to the recruit's identification or feeling at one with members of groups or statuses is considered.

Six aspects of organizations are found to affect the comparisons and identifications of interns and residents. These are the complexity of the organization, patterns of status-sequence, status-sets, role-sets, the composition of one part of the role-set, and the climate of values. Differences in these aspects of organizations are found to influence the degree to which reference-groups become salient for behavior. The tentative findings help clarify prevailing assumptions of reference-group theory and specify some areas for needed research.

The basic data were provided by participant observation, focused interviews, hospital statistics and questionnaires dealing with the staff of the two hospitals. Supplementary data were provided by national statistics on hospitals and by a nationwide survey of 961 interns and residents in a sample of large, university-affiliated hospitals and 360 in a sample of small, non-affiliated community hospitals.

Although the investigation centers on advancing the sociological theory of reference-group behavior, it also provides new evidence on the attitudes and behavior of young physicians undertaking post-graduate education in hospitals. (Author's abstract)

Barker, Thomas Carl
A QUANTITATIVE ANALYSIS OF THE RELATIONSHIPS BETWEEN AND THE INFLUENCES OF THE HOSPITAL SURVEY AND CONSTRUCTION PROGRAM IN IOWA AND THE DISTRIBUTION OF PRACTICING PHYSICIANS IN THE STATE
University of Iowa, Iowa City, Iowa, 1963
Available from U.M.I., document No. 63-7987
Xerox $17.10
Film reel $ 4.85

An investigation to determine how effective the hospital construction program has been in Iowa in meeting the problem of maldistribution of physicians. The author hypothesized: there is a direct relationship between the number of hospital beds in an area and the number of physicians who practice there; that as hospital facilities are constructed and expanded, the number of physicians practicing will increase; that osteopaths will tend to locate where M.D.s' are most scarce. The years 1947, 1952, 1957, and 1962 were studied for change of the relationships. The author concluded there was a "high, positive correlation between physician practice location and hospital bed location in all four years". Doctors of osteopathy were found to act much as doctors of medicine in locating practices. (L.E.W.)

Mooney, Robert C.
A PILOT STUDY OF CERTAIN CHARACTERISTICS OF MEDICAL STAFF MEMBERS AND THE DEGREE OF CORRELATION THEY EFFECT BETWEEN THE CLINICAL CHIEFS AND BED COMPLEMENT OF A HOSPITAL
Program in Hospital Administration, University of Minnesota, Minneapolis, Minnesota, 1967
Available from U.M.I. Xerox $3.70
Film reel #2.15 $4.75

Purpose of this study was to determine if the bed complement of a hospital is a prime factor in determining characteristics of the clinic chiefs it maintains, with special focus on characteristics of the smaller hospital. Chiefs in six metropolitan hospitals of varying bed size were studied. It was hypothesized there would be negative correlation between size and degree to which chiefs differ from their medical staff in terms of five factors stressing a "wisdom-oriented" environment. A positive correlation was hypothesized for five factors stressing a "prestige-oriented" environment. Only one correlation was proved as hypothesized - bed complement to sum of memberships in special societies, a prestige factor. Three other factors were significant in the opposite direction of hypothesis. It is concluded small community hospital characteristics are not inherent in small hospitals and perhaps size is not an important factor at all in determining differences in characteristics between small and large metropolitan hospitals. Further research is recommended, using geographic location, type of hospital, size of medical staff, and procedure for selection of chiefs as independent variables. (D.F.B.)

HEALTH CARE OF HOUSE OFFICERS, A COMPARATIVE STUDY
New England Journal of Medicine, Vol. 277, No. 17, October, 1967, pp. 907-910
Available from original publisher

Questionnaires were sent to a random sampling of interns and residents in Boston hospitals and to Ph.D. candidates of a Boston graduate school to determine the pattern of health care for the house officers and to compare it with that of the Ph.D. candidates. The survey showed that 46 per cent of the 237 house officers responding received no medical care while only 21 per cent of the 272 Ph.D. candidates responding received none. Author concluded house officers do not receive adequate care and that hospitals should assume greater responsibility for the care. (A.R.N.)

DRUG REACTIONS AND ERRORS IN ADMINISTRATION ON A MEDICAL WARD
Canadian Medical Association Journal, October, 1967, Vol. 97, pp. 1001 - 1006
Reprints available from Dr. C. W. Gowdey, Department of Pharmacology, University of Western Ontario, Health Sciences Centre, London, Ontario, Canada

One hundred four patients in a thirty-one bed ward studied for 1,517 patient days during a fifty-nine day period for reactions to drugs and to detect errors in drug administration. Reactions to drugs were determined by observations of patients. Errors in drug administration were determined by comparison of doctors' orders and nurses' notes and were classified as "overdose", "under dose", or "omission". Twenty-nine reactions were detected in twenty-six patients; twenty-three errors in drug administration were detected in twenty patients. Data tabulated in several distributions. (L.E.W.)

Walker, Dorothy Jean
PATTERNS OF PATIENT CARE: A STUDY OF PATIENT CONTACT IN A COMMUNITY HOSPITAL
St. Louis University, St. Louis, Missouri, 1967
Available from U.M.I., document no. 67-2975
Xerox $10.15
Film reel $ 3.00

This research was concerned with studying patient contact as a manifestation of various possible organizational processes, which are influenced by the limitations of available staff, space, and technical resources.

The hypotheses of this study were that: (1) the distribution of patient contact by the non-resident force is related to type of procedures, (2) the distribution of patient contact by resident force is significantly related to staff determined severity of patient condition, (3) the distribution of patient contact for surgical patients shows different pattern variations than for medical patients, and (4) the frequency of patient initiated contacts will vary with the sex and age of the patient.

The descriptive survey method of research was employed. Data were collected by means of structured observations carried out on a thirty-one bed, medically non-segregated unit in a one-hundred and twenty bed community hospital. The hospital operates a diploma school of nursing which admits, on the average, twenty students each year.

On the basis of the findings of this study the following statements were made:

The non-resident actors spent significantly more time with the patient in the performance of activities which had originated in the specific health needs of patient than they did in carrying out institutional routines and, at least to this extent, contributed to the institutional goal of individualized patient care. The amount of time spent in patient contact by the resident actors was found to increase significantly as the number of orders written by the physician increased. The patient-resident actor contact time was also found to be influenced by the nurse's estimate of the patient's condition. However, in this case there was not a direct increase in the amount of time spent with the patient as the patient condition increased in severity.

Separation of the patients into medical and surgical groups for study showed that the surgical patient received more care in terms of contact time during the first quarter of his hospital stay than did the medical patient. The reverse was the case during the last three-quarters of the patient's hospitalization.

When frequency of patient initiated contacts was studied according to the age and sex of the patient the absence of a significant difference among the various categories led to the conclusion that the needs or wants of patients of all age groups and of both sexes were being met with equal facility. Hodgins, K. W.
A STUDY OF PATIENT CONSENTS TO THERAPY IN GENERAL HOSPITALS
Department of Hospital Administration, School of Hygiene, University of Toronto, Toronto, Ontario, Canada, 1965
Available from U.M.I. Xerox $3.85
Film reel #2.15 $4.75

The author studied the use of consent agreements for therapy in general hospitals in Ontario. He discussed what "consents" are, their relationship to law, and certain special aspects to be considered about them.

Analysis of questionnaires returned by fifty of the larger general hospitals of Ontario showed that: there is not agreement on whether all admissions should sign some sort of consent; a majority of hospitals require a consent where treatment with risk is involved; the attending physician rarely presents the consent form; written statements are required later for consents given over the telephone; most hospitals at times ask for legal assistance about consents; most administrators believe a consent manual is needed. (L.E.W.)

Llewelyn-Davies, R.; Macaulay, H. M. C.
HOSPITAL PLANNING AND ADMINISTRATION
Monograph Series No. 54
World Health Organization, Geneva, Switzerland, 1966
Available in U.S. from International Documents Service, Columbia University Press, 2960 Broadway, New York, New York 10027 for $5.25

The book presents basic information on hospital planning and administration for world-wide use. The first section is devoted to national and regional planning. The second section discusses planning of general hospitals of several hundred beds serving populations of 50,000 to several hundred thousand. The third section analyzes "the requisites of the principal departments within a comprehensive general hospital". The general orientation is toward discussion of problems rather than a presentation of floor plans and department layouts. The book's bibliography is annotated and gives citations from several countries. (L.E.W.)

MULTIPLE STRATIFICATION OF GENERAL HOSPITALS
U.S.P.H.S. Grant No. CH00039
Survey Research Center and Bureau of Hospital Administration, The University of Michigan, Ann Arbor, Michigan 48108
Available from U.M.I. Xerox $3.00
Film reel #2.16 $4.25

A detailed analysis of factors involved in sophisticated sampling procedures, relevant to persons using the Goodman-Kish probability technique to sample hospitals and to those planning ad hoc hospital studies when resources and time available for designing the sample are strictly limited. Detailed tabulations of variables generally available for stratification of the hospital universe are presented and discussed. Characteristics considered are bed capacity, geographical region, Standard Metropolitan Statistical Area classification, hospital control or ownership, and selected approvals. For a limited set of variables, the results of an empirical investigation of the reduction in the sampling variance accompanying increased stratification are reported. Data employed are for the 1961 universe of United States nonfederal, short-term general medical hospitals. The investigation suggests that after stratification by bed capacity and geographical region, SMSA class or hospital control would be the more likely variables to use in the primary stage of a multistage sample. Stratification variables omitted at the primary stage may be incorporated in the second stage of selection. While adding substantially to the work, stratification by approvals appears to lead only to minor increases in precision of the estimates considered. See also MN0019, Volume IV, No. 1. Reports on results of a three year study (conducted 1957 - 1959) of improvement programs in fourteen New York hospitals. Two different programs were studied, requiring employee participation: a work simplification program and a methods study and development program. Each program was tested at seven hospitals. See also abstract MN1036. The report is arranged in four parts. Part 1 offers background data on work simplification and description of how study was organized and conducted. Parts 2 and 3 describe

basic elements and accomplishments of two programs tested and evaluations of each program. Part 4 compares and summarizes basic characteristics and findings of two programs and presents study's conclusions and recommendations concerning successful administration of employee participation programs. Appendices include statistical data relating to programs, an outline of proposals selected for installation by department and syllabuses of training courses for program directors. (D.F.B.)

TRAINING COURSE MATERIAL FOR DIRECTORS OF HOSPITAL IMPROVEMENT PROGRAMS
U.S.P.H.S. Grant No. HM-00037
United Hospital Fund of New York, 3 East 54th Street, New York, New York 10022, 1960
Available from U.M.I. Xerox $8.80
Film reel #2.17 $4.50

This volume contains materials for two different courses: (1) a course in work simplification; and (2) a course in methods study and development. Materials for each course include: content of the training course; syllabus of the training course; illustrations of charting tools taught to program directors; list of motion pictures shown to program directors; list of books distributed to program directors; and materials given to program directors for possible distribution to hospital employees during in-service training sessions. A list of faculty participants for each of the two courses is included also. This material should be read as supplement to "Hospital Improvements Through Employee Participation". Hudson, Wellborn R.
AN APPLICATION OF MANAGEMENT ENGINEERING TO NONREPETITIVE WORK - HOSPITAL NURSING
Department of Industrial and Management Engineering, Graduate College, University of Iowa, Iowa City, Iowa, 1954
Available from U.M.I., document no. 10,219
Xerox $11.70
Film reel $ 3.30

An early (1954) work measurement study. The nursing service of a hospital was chosen to test whether industrial engineering techniques could be applied meaningfully to non-repetitive work as it has been traditionally to repetitive tasks. Standard techniques of work sampling, process analysis, activity analysis, layout, work planning and written standard procedure were all applied successfully. Memomotion analysis was restricted in usage by technical difficulties of lighting and field of camera view.

In a pilot study ward a number of tasks were formed into a standard work plan which: saved approximately 25 per cent in walking by nurses; enabled handling of ward with 17 per cent less personnel; and permitted prediction of amount of time required for completion of tasks in the standard plan. (L.E.W.)

A STUDY OF WORK SIMPLIFICATION IN HOSPITALS WITH EMPHASIS UPON ECONOMIC IMPLICATIONS
University of Pittsburgh, Pittsburgh, Pennsylvania, 1957
Available from U.M.I., document no. 22,864
Xerox $13.60
Film reel $ 3.90

The general objective of this study is to discover and to identify problems of application, to appraise applicability, and to propose means of minimizing obstacles to the application of work simplification principles to hospitals, with due regard for economic considerations. The approach selected for pursuing this objective premises the flow of problems of application from economic, psychological, sociological, and philosophical factors. The study itself is divided into three main parts. The first deals with the environment within which the central problems of applicability function, the second with the means employed in treating these central problems, and the third with constructive proposals for capitalizing upon the solutions to problems of applicability.

The study holds that if specialists in hospital and medical administration understand the economic bases of health services, they will be better equipped to deal with problems in the decision-making process. Through such an understanding, definitive administrative and management guides can be established for quality and cost. Thus, with a policy on quality levels and cost goals within which to work, the industrial engineer can proceed to the task of maximizing the quality-cost ratio.

The opinions of health-oriented people are that instructional technique and training materials used in the institutes of this study are satisfactory and that the tools of work simplification are useful. Workshop experiences make possible an analysis of alternative methods of indoctrination. A comparison between the opinions of work-shop participants and methods practitioners reveals general agreement on work simplification applicability. One must conclude that work simplification practitioners generally regard their work as important in carrying out hospital objectives. They testify, as do workshop participants and respondents, that the principles of work simplification are readily applicable to hospitals. (Author's abstract, adapted)

TRANSITIONAL PROBABILITIES AND THE ESTIMATION OF NEED FOR HOSPITAL SERVICES
Research and Training School, Indian Statistical Institute, 203 Barrackpore Trunk Road, Calcutta 35, India, 1966
Available from U.M.I. Xerox $3.00
Film reel #2.17 $4.50

This paper presents a series of statistical models of probabilities and estimators for admissions, duration of stay and cost of hospitalization. Models are first formulated for a homogeneous population and undifferentiated medical services. These initial concepts are then expressed in matrix form to represent varying

need for medical services as function of age and sex. A third set of transitional probability concepts is presented which incorporates fluctuations of level of disability into the model of hospital demand. These models can be applied to populations of varying age-sex structures and varying standards of living and health care. (D.F.B.)

SERVICE GATE INFORMATION AND PREDICTION OF DEMAND FOR HOSPITAL SERVICES
U.S.P.H.S. Grant W192(C1) at Case Institute, Cleveland, Ohio
Journal of Operations Research in India, Vol. I, No. 3, pp. 141-150
Available from Operational Research Society of India, C/O C.S.I.R., Rafi Marg, New Delhi, 1, India, published quarterly, $5.00 per year in U.S.

Describes a method for predicting demand for hospital services by using patient's age and number of diagnoses made by admitting physicians. Data were abstracted from patients' records at Cleveland Metropolitan Hospital and a sampling frame was drawn up according to topographic system affected and operative status. Data were analyzed using multiple regression and factor analysis techniques to identify important variables and service factors. Values for patient's age and number of diagnoses are determined and used in a model with appropriate coefficients and constants to predict demand for five hospital services: duration of stay; laboratory tests; nurses notes; physicians' order; and number of records in a patient's chart. Report includes tables of statistical data used in study. (D.F.B.)

APPLICATIONS OF A FIXED INPUT QUEUE
Johns Hopkins University, Baltimore, Maryland, 1965
Available from U.M.I., document No. 64-10,451
Xerox $5.00
Film reel $3.00

In the pursuit of solutions to several seemingly desperate problems a certain infinite channel queue, called the fixed input queue, in which arrivals are uniformly spaced in time and service times are exponentially distributed has turned out to be of central importance. In Chapter One the transient and equilibrium state probabilities for this queue are derived. The moments of the

equilibrium probabilities are given. An analogy between the fixed input queue and a Bernoilli Process is exhibited, and the advisability of approximating the fixed input queue by a Poisson process is discussed.

Chapter Two contains a problem of hospital operations research: to determine the expected gain of occupancy in two medical units to be effected by making available beds of each unit to the other. The gain of occupancy to be anticipated through scheduling is determined using the equilibrium probabilities of the fixed input queue. Other chapters deal with non-hospital applications. (Author's abstract - adapted)

Goldberg, Donald H.
"THE HOSPITAL ENVIRONMENT" AS A FACTOR AFFECTING HOSPITAL UTILIZATION BY INDIVIDUAL PHYSICIANS WHO WORK AT MORE THAN ONE HOSPITAL
Program in Medical Care Administration, Graduate School of Public Health, University of Pittsburgh, Pittsburgh, Pennsylvania, 1967
Available from U.M.I. Xerox $3.25
Film reel #2.17 $4.50

Mean preoperative and postoperative lengths of stay were computed in selected diagnostic classifications for patients of physicians affiliated with more than one hospital to determine if hospital environment was a significant factor affecting utilization. In addition, mean stays of study patients were compared with the means of all patients for each diagnosis studied. Data were obtained from HUP and included twelve Allegheny County hospitals. Data indicate in six out of ten surgical comparisons the difference between surgeon's means at the two hospitals did not reflect a change in same direction as difference between means of all patients in two hospitals. The difference in surgeon's means, however, were not as great as differences in hospitals' means. It is therefore inferred: (1) Surgeon is more consistent as an individual than two hospitals when dealing with same diagnosis. (2) Hospital environment has some influence on length of stay, but judgment on postoperative length of stay is result of both personal and environment influences with personal predominating. Analysis of preoperative length of stay indicates it not influenced by surgeon's judgment as much as postoperative stays. (D.F.B.)

Aird, John C.
PROFESSIONS WITHIN AN ORGANIZATION: CONFLICT AND ADAPTATION
Graduate Program in Hospital Administration, School of Public Health, University of California, Berkeley, California, 1967
Available from U.M.I. Xerox $4.15
Film reel #2.18 $6.75

Fifty respondents employed at a county hospital rated their own and nine other occupations on the degree to which they were professionalized. Employees rated each occupation on four characteristics: (1) esoteric body of knowledge; (2) judgment utilization; (3) group autonomy in work situation; and (4) group community service approach.

Gross results were predictable, with housekeepers rated lowest on the scale by everyone, and clinical psychologists and clinical physicians rated highest. Intermediate occupations judged themselves as more professional than management did, supporting the results of researchers.

Where significant differences in perception of professionalism exist, the author suggests, conflict will occur in the organization. (B.L.O.)

THE SYSTEM OF UNOFFICIAL RULES OF A BUREAUCRACY: A STUDY OF HOSPITALS
University of Pittsburgh, Pittsburgh, Pennsylvania, 1963
Available from U.M.I., document no. 63-7562
Xerox $11.95
Film reel $ 3.40

One hundred ninety-four taped interviews were collected in seven hospitals to develop "a theory of the unofficial rules or informal covenants that arise among personnel of the general hospital" and to show "how the unofficial rules are generated by the hospital's social structure and social system". The study concentrated on interaction between physicians and subordinate personnel, both laymen and "second-rank" professionals. A variety of situations were considered: the admission of emergency cases; drug procurement; ward rounds of physicians; scheduling of surgery; and the use of the emergency room facility.

A dual structure and dual authority system were noted: a bureaucratic structure based on office or administration to handle the "secondary" needs of patients; and a collegial structure (medical staff) to handle the "primary" needs of patients. When the demands of the physicians ran counter to the bureacratic, the subordinates sometimes were found facing contradictory directives. Unofficial rules developed when personnel adjusted bureacratic rules to fit expectations of physicians. "The unofficial goal of physicians is that bureaucratic routine and rules shall not interfere with individualized patient care". The unofficial rules were found also to "generate some unintended consequences that can inhibit the attainment of other goals in the hospital" by disrupting the routines of subordinate personnel. Responses to the unofficial rules were found to range from overt hostility to identification with the physicians and legitimation of unofficial rules. (L.E.W.)

Adams, Fred Thomas
ROLE ACCOMMODATION: A STUDY OF NURSES AND ATTENDANTS IN A MENTAL HOSPITAL
Tulane University, New Orleans, Louisiana, 1958
Available from U.M.I., document No. 59-1079
Xerox $21.00
Film reel $ 6.05

The central problem considered was "to determine what accommodations nurses and attendants in a modern Southern mental hospital made and to see how such accomodations fitted in with formal demands and expectancies of the reciprocal occupational group".

A group of "reciprocal actors" (eleven nurses, and 104 ward attendants) was studied over an eighteen month period to determine role conception. Interviews, questionnaire, and observations were used.

The roles and statuses were quite clearly defined but the respondents were found not to be accepting or acting roles. The author concluded the role is not determined solely by the process, but "structured within a cultural framework of values, beliefs, and attitudes which are incorporated by the actors during socialization . . ." (L.E.W.)

Holmgren, John Howard
THE QUASI-PUBLIC CHARACTERISTICS OF THE PRIVATE HOSPITAL
Department of Political Science, University of Wichita, Wichita, Kansas, 1962
Available from U.M.I. Xerox $3.35
Film reel #2.18 $6.75

Selected indices of public administration in public and private hospitals were compared to determine to what degree private hospitals are losing their essentially private characteristics and becoming quasi-public in nature. Characteristics of Kansas City General Hospital were compared to a voluntary, private hospital in terms of: finances and clientele; legislative and legal controls; democratic behavior; organizational parallelism; theory of "consent"; rule of immunity; voluntary cooperation on national basis;

local autonomy; flexibility and dynamics of hospital trends; application of public administration theory to hospital administration field. Study found private hospitals exhibited quasi-public characteristics in organizational structure, public responsibility for patient care, non-profit and tax exempt status; degree of semi-political influences exercised by appointed or elected members of Board of Trustees, and dependence on theoretical field of public administration by leaders of voluntary hospital associations. The acceptance of Social Security plan for medical care of the aged is seen as adding to public nature of the voluntary hospital. Appendices are missing. (D.F.B.)

NATION-WIDE STUDY OF COORDINATION AND PATIENT CARE IN VOLUNTARY HOSPITALS
Survey Research Center, Institute for Social Research, The University of Michigan, Ann Arbor, Michigan
Available from University Publications, Institute for Social Research, Ann Arbor, Michigan 48106 for $2.00

A report of preliminary results of a nation-wide study of voluntary hospitals "designed to provide the fifty hospitals which participated in the study with information on various aspects of their operation, as seen by people directly associated with each institution".

Data were collected in the last quarter of 1962 through use of questionnaires and interviews. Respondents were mainly from groupings of: non-supervisory R.N.'s; supervisory nursing staff; key medical staff, general medical staff; and department heads. Other persons were also interviewed in certain technical aspects of the study.

Findings were presented about: the hospital(s) in general; the job and work situation; supervision and communication; organizational coordination and intergroup relations; intraorganizational strain; patient care and quality of service; performance of selected groups and departments; adequacy of selected facilities; some aspects of organizational change; selected characteristics of respondents; and reactions of respondent to study.

Results tabulated in percentages showing findings by hospital size, "own" hospital, PAS hospital, national average, regional average, religious-non-religious, and group reaction. (L.E.W.)

A STUDY OF A HOSPITAL OPERATED NURSERY SCHOOL IN RECRUITMENT AND STABILIZATION OF REGISTERED NURSES 1964-1966
Program in Hospital Administration, University of Minnesota, Minneapolis, Minnesota, 1967
Available from U.M.I. Xerox $4.25
Film reel #2.19 $5.50

This is a study of the impact that a hospital-operated nursery school at Mt. Sinai Hospital in Minneapolis, Minnesota has upon the recruitment and stabilization of nursing personnel at the hospital. In December, 1966 sets of questionnaires were submitted to two groups of registered nurses at Mt. Sinai Hospital - those who were married and those who were single - seeking their attitude toward the nursery school. There were 106 responses. The study observes that nurse resignations have remained fairly consistent over a three year period, that there has not been a significant increase in unemployed nurses with children returning to nursing and that there has been a decrease in the use of the nursery school by the nursing staff at Mt. Sinai. The study concludes that the nursery school has little effect upon the recruitment and stabilization of nursing personnel at the hospital. (A.R.N.)

MARRIAGE AND NURSING, A SURVEY OF STATE REGISTERED AND STATE ENROLLED NURSES
National Florence Nightingale Memorial Committee of Great Britain and Northern Ireland, 175 Cromwell Road, London S.W.5, England
Available from original publisher for $1.05

A report of a questionnaire survey conducted by the Dan Mason Nursing Research Committee of Great Britain and Northern Ireland to estimate the proportion of registered and enrolled nurses inactive because of marriage or other reasons and the proportion of those likely to return to nursing and the conditions under which they would return. The study was based on a sample of 5,974 nurses who qualified for the General Register in 1950 and 1959 and for the Roll in 1950, 1954 and 1959. Report shows that about three-fourths of respondents were married and almost half of these were not gainfully employed. It suggests the latter might be a source of nurses to meet the nursing shortage. Wages, hours, attitudes desired by these nurses are discussed. Respondent profile data tabulated and specimens of questionnaires given. (A.N.)

Film reel $2.75

A study made to ascertain the practices of 133 member hospitals of the Missouri Hospital Association in utilizing the services of licensed practical nurses, to determine the level of competency at which the LPN's were performing their duties, and to determine current and future employment opportunities for LPN's. Hospitals supplied information concerning hospital facilities, personnel policies, and staffing. LPN's supplied employment information and supervisors rated LPN's in performance of fifty duties selected as being representative of "high-level nursing care".

LPN's were found to be doing bedside care in 95 per cent of cases. Supervisors rated LPN's higher in competency than the LPN's did themselves, and rated more duties for LPN's than the practical nurses did themselves. Supervisors indicated the extent of illness of patient was not a factor in duty assignment of LPN. Data were given on employment and salaries for Missouri with immediate and projected needs for LPN's stated.

Author concluded: LPN's were performing "a considerable portion of their duties without the direct supervision of professional nurses"; degree of illness no longer a factor in work assignment; LPN schools should place more emphasis on teaching nursing skills; specialized duties infrequently performed can be taught on the job; training facilities for LPN's in Missouri should be increased and wages raised. Hill, Marion Elizabeth Hanley
THE PRACTICAL NURSE: ROLE EXPECTATIONS HELD BY RELEVANT GROUPS
Michigan State University, East Lansing, Michigan 1963
Available from U.M.I., document no. 64-7512
Xerox $7.60
Film reel $2.75

The purpose of this study was to identify and clarify the agreement and disagreement of role expectations which the practical nurses, directors of hospitals, medical doctors and three groups of professional nurses: administrators, non-administrators and clinical instructors hold for selected aspects of the duties and responsibilities of the practical nurses. These expectations related to the following areas of practical nursing: general responsibility, bedside, bedside-technical, technical and medical. Intraanalysis of the expected and actual roles of the practical nurses was also included in the study. It was hypothesized that the expected and actual roles of the practical nurses would be defined differently by the different respondent groups.

Practical nurses, directors of hospitals, medical doctors and three groups of registered nurses: administrators, non-administrators and clinical instructors associated with the eight practical nurse centers in Michigan were given a questionnaire dealing with expected and actual role of the licensed practical nurse. Opinions were expressed on a five point scale of intensity varying from "never" to "always". Thirty-three items were selected for intensive analysis. The expected and actual roles of the practical nurse, as seen by the practical nurse, were expected and actual (inter-analysis) role expectations of the respondent groups were compared with those of the practical nurse and agreement and lack of agreement noted.

Significant differences were found between means of certain items pertaining to the expected and actual roles of the practical nurse as seen by the practical nurse. There tended to be more in the area of general responsibility than in the areas of duties.

Significant differences were also found between the means of items pertaining to the expected and actual roles of the practical nurse as seen by the practical nurse and the respondent groups. (Author's abstract, adapted)

THE ORGANIZATIONAL CONTEXT OF NURSING PRACTICE
THE NURSING PROFESSION: FIVE SOCIOLOGICAL ESSAYS, pp. 109-127, 1966
Available from original publisher, John Wiles & Sons, New York, New York

Organizational analysis of the nurse in the hospital, examining the hospital from the point of view of its impact on the unfolding of the nursing function and of the direction, limits, and climate that it sets for nursing.

Two systems of functions operate interdependently, although separately, within the total complex of hospital patient care. One, medical in nature, is concerned with the direct therapeutic practices and with the process of diagnosis and treatment. This is called here the "cure" process. The other, somewhat less purposive and less clearly identifiable, is the syndrome of functions which can be grouped under the term "care". The nurse's place in these systems, involving various conflicting as well as coordinating roles, is analyzed.

Alternative ogranizational proposals and innovations appearing in recent years are discussed in the light of their potential advantages and shortcomings when gauged against nursing's traditional emphasis. Figures, references. (*Medical Care Review*, Vol. 24, No. 10, pp. 825)

NURSES' PERCEPTIONS OF ROLE REQUIREMENTS AND ROLE ACTION IN SITUATIONS INVOLVING DEATH IN HOSPITALS
University of Washington, Seattle, Washington, 1963
Available from U.M.I., document no. 64-4501
Xerox $12.60
Film reel $ 3.60

This study is a sociological analysis of how nursing personnel respond to situations of potential threat in the work situation. The potential threat considered is the occurrence of dying and death of patients in hospitals. Inquiry was directed to the perception of death, role requirements, and role action in three hospitals with different philosophical or value orientations. A series of fifty-six hypotheses were tested relating seven designated independent variables to the perception of norms and acts for the solution to interpersonal problems between nurses and dying patients.

Data was collected by group administration of a questionnaire to 426 respondents who were the full nursing personnel of the three hospitals. Supplementary data was collected through the analyses of the procedure and policy manuals of the three hospitals and a select number of interviews.

Formal written role prescriptions were found for the handling of the dead, but no such role requirements existed for the interpersonal relationships of nurses with dying patients. Despite this, in two out of three of the total choices registered in this study, the respondents said they should refer these problems to the internal social system of the organizations. This represented a considerable degree of normative consensus.

The amount of inconsistency between the normative and action perceptions, for the solution of the seven contrived situations which were representative of the threat was slight. (Author's abstract, adapted)

Crichton, Anne; Crawford, Marion P.
THE LEGACY OF NIGHTINGALE
Welsh Hospital Board, "Carville", The Avenue, Llandaff, Cardiff, Wales
Available from original publisher

A survey of the nurse staffing problems of Welsh hospitals, particularly in the larger acute general District Hospitals. Matrons (Directors of Nursing), Chief Male Nurses, and Tutors (nursing

school faculty) of hospitals with training schools in Shrewsbury and Hereford were sent questionnaires and later interviewed in 1964. In 1965, Matrons and Chief Male Nurses of non-training hospitals were sent questionnaires.

The conclusions of the survey outline the present and changed roles of nurses, nursing administrators and educators, and changed organizational relationships. The state of recruitment, education, and administration of education are all evaluated from data collected. The survey also contains data on the present nursing manpower situation with recommendations for future action. (L.E.W.)

STUDY OF NURSE ACTIVITY AFTER REMOVAL OF MANAGEMENT FUNCTIONS
Journal of Psychiatric Nursing, November-December, 1966, pp. 531-539
Available from Stuart James Company, Box 204, Bordentown, New Jersey for $1.00 per copy

Non-nursing functions were removed from the duties of two psychiatric head nurses to see if increased time would be spent in direct patient care in a project at the Veterans Administration Hospital at Brockton, Massachusetts. Work sampling of activities and conferences to report on patient contact provided comparative data during a twelve-week study. While little change was noted in direct patient care time, author suggests that higher management direction with more nurses involved might produce further behavioral change. (H.M.)

A GUIDE FOR STAFFING A HOSPITAL NURSING SERVICE
World Health Organization, Geneva, Switzerland, 1966
Available in U.S.A. from Columbia University Press, International Documents Service, 2960 Broadway, New York, New York 10027 for $1.25

This guide presents material useful in considering staffing needs for a hospital nursing service. It offers a method for calculating amount and kinds of nursing personnel needed, based on an analysis of nursing work to be done in a hospital ward. Consideration is given to these factors relating to patient care: personal care of the patient; services performed by other hospital departments; physical environment of physician; and ward management of nursing care. Hospital administrative practices relating to nursing are discussed including standards of care, personnel management and techniques of administration. Guide is based on data and opinions collected from 112 nursing, medical and administrative personnel from various countries. Appendices include organizational charts for nursing services in small and medium-sized hospitals, sample of time assignment sheets, and job descriptions of nursing positions. (D.F.B.)

A STUDY OF THREE CONCEPTS IN TEAM NURSING
Graduate Program in Hospital Administration, School of Public Health, University of California, Berkeley, California, 1967
Available from U.M.I. Xerox $3.00
Film reel #2.19 $5.50

Report of a study comparing team nursing in a 420 bed acute general hospital to a modified ease approach to nursing care in a 340 bed acute general hospital and 160 bed acute medical hospital. Several types of questionnaires were administered to general duty staff nurses, licensed practical nurses and aides. It was concluded that team nursing neither improves personnel utilization nor increases job satisfaction. Team conferences were found to be dependent upon the ability of the participants and considered not essential to group problem solving.

Bibliography, tables, sample questionnaires included. (R.N.S.)

Clark, Lawrence J.
AN ANALYSIS OF NURSING UNIT DRUG AND LABORATORY ACTIVITIES IN TWO HOSPITALS
Program in Hospital Administration, The University of Michigan, Ann Arbor, Michigan 48108 1967
Available from U.M.I. Xerox $3.65
Film reel #2.19 $5.50

A comparative study between the self-contained unit management approach to the provision of laboratory and pharmacy services on a nursing unit, and the traditional method for providing these services. The effect of placing a laboratory technician on a nursing unit to be responsible for the processing of all requests for laboratory is compared to a nursing unit without this laboratory representative.

The effect of the unit dose system of providing drugs to the nursing unit is compared to the traditional method of providing drugs. The study of effect is limited to nursing activity. Comparison was made between University Hospital in Lexington, Kentucky, where the self-contained nursing units were located, and a short term acute hospital also located in Lexington, Kentucky. Analysis of nursing activity patterns revealed that the organization of laboratory services using technical representatives from the laboratory on the nursing unit resulted in a substantial reduction in nursing unit personnel's involvement in laboratory functions. A similar effect cannot be attributed to the centralized unit-dose dispensing program. Statistical findings are presented. Author concludes that the self-contained unit approach may contribute to an overall reduction in nursing personnel time consumed on supportive activities but that further study is required to determine total effect. (S.F.L.)

Jaco, E. Gartley
EVALUATION OF NURSING AND PATIENT CARE IN A CIRCULAR AND RECTANGULAR HOSPITAL UNIT - Final Report
A report to Hill Family Foundation, 1967
Available from E. Gartley Jaco, Ph.D., Department of Sociology, University of California, Riverside, California 92502

Final report on study which quantitatively evaluated the effects of physical design on patient care and efficiency in the use of nursing personnel in a general hospital. Phase I compared patients needing intermediate care, Phase II patients requiring intensive care and Phase III compared self-care. Ten dependent variables were investigated: type, amount and level of nursing care; nurses' utilization of unit; patient welfare; patient satisfaction; nursing staff satisfaction; physician satisfaction; length of stay; and costs of patient care. Twelve study situations were set up for each level of care in which occupancy and nursing staff levels were varied. Report gives results of findings when all study situations are pooled as well as individual findings for each study situation. Some of the major findings are: (1) In situations where there is a high demand for patient care and a limited nursing staff, the circular unit has more advantages in provision of total patient care than the angular unit. (2) Some types of patients are not suitable for circular unit. (3) Circular unit is designed more for staff convenience than patient convenience. (4) Reducing demands for patient care is more detrimental to morale of nursing staff on circular unit than angular unit. (5) Operational costs are less for circular unit in size studied (twenty-two beds) with equal or better quality patient care than angular unit. It is concluded physical design can lower costs without imparing quality of care depending on psychological, administrative, medical and social utilization of the unit. (D.F.B.)

Underwood, Claire Blout
COMPARISON OF NURSING ACTIVITIES BEFORE AND AFTER IMPLEMENTATION OF THE PATIENT UNIT MANAGEMENT PROGRAM
School of Health Service Administration, University of Alabama, Birmingham, Alabama 1967
Available from U.M.I. Xerox $3.00
Film reel #2.19 $5.50

Study compared proportion of time nurses spent in non-nursing activities before patient unit manager program began and afterwards on a forty-nine bed surgical sub-specialty unit for medically indigent patients at University of Alabama Hospital. Data from a work-sampling study of the unit in 1963, before introduction of Patient Unit Management was compared to a 1966 study of the same unit with a patient unit manager. Study found total patient care activities, direct and indirect, increased from 40.5 per cent in 1963 to 59.2 per cent in 1966. Direct patient care showed greatest amount of increase. In addition, there was a 65.9 per cent decrease shown in unit management activities performed by nursing personnel. Comparisons by day of week, by hour and by worker classification also demonstrate an increase in total and direct patient care and a decrease in unit management activities. Copies of observation sheets used and statistical data from the study are included in the appendix. (D.F.B.)

Spang, A. James
A STUDY TO DETERMINE THE ROLE OF THE PATIENT SERVICES MANAGER AS SEEN BY TWO GROUPS OF NURSING SERVICE PERSONNEL
Program in Hospital Administration, University of Minnesota, Minneapolis, MInnesota, 1967
Available from U.M.I. Xerox $7.05
Film reel #2.20 $5.00

The study was based on data obtained by questionnaires from control and sample groups of registered professional nurses and ward secretaries at Charles T. Miller (Minnesota) Hospital and by interviews with the "authority group" consisting of the Assistant Administrator, the Director and Associate Director of Nursing, the In-service Coordinator and her assistant. The control group worked directly with the patient service manager. The other did not.

No significant difference of opinion was found between the control and sample groups as to the expected behavior or expected attributes of a Patient Services Manager, or of the attitudes of the two groups toward the manager, or of the observed behavior of the manager. Differences of opinion were noted among the Patient Service Manager and members of the authority group which prompted the author to conclude the manager's role "has not been defined for everyone". (L.E.W.)

A STUDY OF THE EFFECTIVENESS OF RECENT SALARY INCREASES ON ATTRACTING THE INACTIVE NURSE BACK TO NURSING
Program in Hospital Administration, University of Minnesota, Minneapolis, Minnesota, 1967
Available from U.M.I. Xerox $3.25
Film reel #2.20 $5.00

This study was made to measure the impact of salary increases late in 1966 in many Hennepin County, Minnesota hospitals as a factor in attracting registered but inactive nurses back tc work. Questionnaires were sent to inactive nurses of the county who were identified in a 1966 study at Fairview Hospital as nurses who either were not interested in returning to work or who might return under certain conditions. Questionnaires were returned by 336 nurses in February, 1967. The study concludes that salary is not a major factor in the decision of whether to return to work or not, that family and personal reasons were more significant. (A.R.N.)

Schmitt, George H.
BIOGRAPHICAL CHARACTERISTICS AND JOB STABILITY OF REGISTERED NURSES
Program in Hospital Administration, University of Minnesota, Minneapolis, Minnesota, 1967
Available from U.M.I. Xerox $3.50
Film reel #2.20 $5.00

The relationship of biographical characteristics to job stability of permanent full-time registered nurses was studied at Palo Alto - Stanford Hospital Center, California. A questionnaire was developed which included forty-eight biographical characteristics. Of these forty-eight, twenty-two were considered significant to job stability at .05 level, using chi-square test. Job stability is defined in study as working at least twenty-four months with each employer. Many of the twenty-two significant characteristics were considered a function of age. Further analysis was made, holding age constant. Six characteristics were found to be significant and unrelated to age, but were considered weak as predictors of job stability for reasons discussed. Study concludes present age and age at time of hire held most value in predicting job stability. The more stable nurses had significantly higher mean age when hired and at the present time. Some of the other significant factors were marital status, number of children and home ownership. Copy of questionnaire used and statistical data are included in the appendix. (D.F.B.)

Graham, John A.
A STUDY OF NURSES PREFERENCE FOR SELECTED FRINGE BENEFITS AND THE IMPORTANCE OF FRINGE BENEFITS IN RECRUITMENT
Program in Hospital Administration, University of Minnesota, Minneapolis, Minnesota, 1967
Available from U.M.I. Xerox $3.95
Film reel #2.20 $5.00

Fringe benefit preferences of full time female nurses at St. Luke's Hospital, Milwaukee, were surveyed by questionnaire to determine: (1) if fringe benefits were an inducement to accepting employment at St. Luke's; (2) if fringe benefits are more attractive than comparable additional salary as inducement for employment; (3) importance of fringe benefits if a nurse were looking for employment elsewhere; and (4) preferences for selected benefits. Each of these situations was analyzed by variables of age, marital status, tenure and salary. Study found generally a majority of nurses considered fringe benefits an inducement to accepting employment at St. Luke's and would not have accepted the position if additional salary comparable to fringe benefits had been offered instead. Except for those in the 1 - 3 years tenure group, a majority of nurses indicated they would place more emphasis on fringe benefits now than they would have originally if looking for another job. Ranking of certain benefits varied according to variables tested. Paid vacations and holidays, however, were found to be independent of other benefits and not affected by variables studied. (D.F.B.)

Rowland, John E.
NURSING SERVICE TURNOVER AT SAN ANTONIO STATE TUBERCULOSIS HOSPITAL
Baylor University, San Antonio, Texas
Available on loan from Asa S. Bacon Memorial Library, American Hospital Association, 840 North Lake Shore Drive, Chicago, Illinois 60611, 1965

A study made to determine the causes, rates, and costs of voluntary termination of employment of nursing service employees at the hospital. A questionnaire was submitted to 260 former employees who terminated employment during a two year period to determine reasons. Costs were figured on basis of cost of termination of old employees, and the expense of hiring and training replacements. The monthly quit rate was expressed as a percentage of the total employed each month. The primary cause for termination was pay administration - rate of pay, method of pay, and management of payroll. Other principal causes were personnel-management oriented. Total pay administration and personnel reasons accounted for 38 per cent; leaving town, military service, family problems, 25 per cent. Monthly quit rate was over four per cent; cost of turnover to hospital was about $45,000 annually. Text of questionnaire given. (L.E.W)

Forest, Betty Lucille
THE UTILIZATION OF ASSOCIATE DEGREE NURSING GRADUATES IN GENERAL HOSPITALS
Columbia University, New York, New York, 1965
Available from U.M.I., dissertation no. 65-14,967
Xerox $7.00
Film reel $3.00

This study was undertaken to ascertain whether associate degree nursing graduates employed in general hospitals in New York City were performing the functions for which they had been prepared in their preservice nursing programs.

The functions of the technically-prepared nurse were identified through a review of the literature and verified by the chairmen of sixty associate degree nursing programs in response to a mailed questionnaire.

Data were collected through the administration of questionnaires to sixty-four associate degree nursing graduates who had no further formal academic preparation and had been employed a minimum of three months in sixteen accredited general hospitals in New York City. Both personal and experiential information were obtained from all graduates. In addition, tape-recorded interviews were held with the nursing service directors in these sixteen hospitals.

Thirteen of the graduates were employed in head nurse positions. The remaining fifty-one graduates who were employed in staff nurse positions provided data concerning their current functions and activities and their preparation for these activities. These data were analyzed to learn whether the graduates were performing the functions for which they had been prepared and if they were performing additional activities. Information provided by the nursing service directors was analyzed to find out reasons for the current utilization of associate degree nursing graduates and to identify the directors' knowledge of the functions for which these nurses were prepared.

The majority of the associate degree nursing graduates were performing functions for which they had been prepared.

The majority reported performing additional activities other than those for which they had received preparation.

Associate degree nursing graduates were considered for promotion on the same basis as other nurses. In making decisions concerning the promotion of staff nurses to head nurse positions, little or no consideration is given to the objectives of the various types of programs in nursing and the preservice preparation of the graduates of these programs. A PLAN FOR THE EDUCATION OF NURSES IN THE PROVINCE OF NEW BRUNSWICK
Columbia University, New York, New York, 1965
Available from U.M.I., dissertation no. 65-10,054
Xerox $12.85
Film reel $ 3.65

This study proposes a plan for the undergraduate education of nurses within the general educational system of the Province of New Brunswick for educating two categories of nurses, differentiated on the basis of educational preparation for the functions which they will perform.

Methodology included: an exploration of geographical, historical, economic and cultural influences on education in the province; a review of the present system of organization and administration of high school and post-high school education, including federal aid to education; an examination of the literature of the past twenty years on pre-specialized nursing education; an examination of reports, minutes, records, and other primary sources pertaining to the study; a survey of the status quo in terms of the quality and quantity of existing nursing education programs, (including, where possible, costs), for the years 1961, 1962 and 1963, using total populations in each year; an exploration of staffing patterns; and an exploration of resources available to the education of nurses.

Analysis of the data leads to the projection, in detail, of two types of nursing education programs, within the general educational system (post-high school) of the province, namely: for the Nurse Grade I and the Nurse Grade II. As well, the education of two new workers in the health services was projected namely: ward keepers and ward secretaries. With the creation of these new workers, it was proposed that the present nursing assistant programs should cease to operate.

The end result was a blueprint for the future, including the identification of the adjustments necessary to the transition from the service-centered and hospital-controlled school of nursing to the education-centered and multi-purpose Institutes for Health Services. An administrative pattern and two university programs, one French and one English, were also presented. The balance in terms of the number of nurses in the groups Nurse Grade I and Nurse Grade II was maintained at 75 per cent and 25 per cent respectively. (Author's abstract, adapted)

A COMPARATIVE STUDY OF SELECTED FACTORS TYPICAL OF DIPLOMA, ASSOCIATE DEGREE AND BACCALAUREATE NURSES
Program in Hospital Administration, University of Minnesota, Minneapolis, Minnesota, 1967
Available from U.M.I. Xerox $3.00
Film reel #2.21 $4.75

Selected factors were compared for diploma, associate degree and baccalaureate nurses to determine what kind of educational background produces a R.N. who works for longest period of time in hospitals. A random sample was drawn of 660 nurses from a total of 32,000 in Los Angeles county. Data were obtained from mailed questionnaires, with 52.5 per cent response. Findings indicate that baccalaureate nurses in sample had highest proportion of those who had never worked in a hospital and were not currently working in a hospital. They also showed highest response for category "better job outside the hospital" as a reason for leaving hospital work. Diploma nurses had highest number of nurses working full-time in hospitals. In response to question pertaining to adequacy of education in preparing a nurse for hospital work, diploma nurses showed greatest confidence, followed by associate degree nurses. Baccalaureate nurses had greatest negative response. (D.F.B.)

A COMPARISON STUDY OF ACTIVE VERSUS INACTIVE NURSE REFRESHEES IN RESPECT TO THE INFLUENCE OF CERTAIN FACTORS IN THEIR ACTIVITY STATUS
Program in Hospital Administration, University of Minnesota, Minneapolis, Minnesota, 1967
Available from U.M.I. Xerox $4.70
Film reel #2.21 $4.75

Study surveyed 183 nurses who were inactive registered nurses and enrolled in one of a series of refersher courses sponsored by Manpower Development Program in St. Paul and Minneapolis during 1965-66. There were 134 questionnaires returned and these were divided into two groups of active or inactive in nursing at the time of the survey. Factors associated with personel environment, past working experience, the refresher course, and initial experiences upon resuming nursing were compared for the two groups. Major findings were: (1) Nurses active in nursing were more likely to have husbands in non-professional occupations. (2) Encouraging attitude by husband increases probability that refreshee will be active in nursing. (3) Refreshees with more than three children have more probability of being active in nursing. Other factors related to refresher course and working experiences did not significantly affect probability of being active in nursing. Copy of questionnaire and statistical data developed are included in appendix. (D.F.B.)

Simms, Laura Louise
THE HOSPITAL STAFF NURSE POSITION AS VIEWED BY BACCALAUREATE GRADUATES IN NURSING
Columbia University, New York, New York, 1963
Available from U.M.I., document No. 64-4340
Xerox $7.80
Film reel $3.00

Fifty-two baccalaureate nursing graduates were interviewed for opinions about the hospital staff nurse position with reference to preservice education, and perceived deterrents to the practice of five clinical nursing functions: (1) planning and implementing individualized nursing care; (2) teaching patient and family; (3) collaborating with members of the health team; (4) assigning and guiding non-professional assistants; and (5) utilizing intramural and interagency nursing referrals. An almost unanimous response was that a large medical center provided the needed practical training combined with their preservice education to fit them for a leadership position (most frequent meaning "teaching"). Sheps, Mindel C.; Ridley, Jeanne Clare; Lingner, Joan W.
EFFECTS OF SELECTED FACTORS ON NATALITY: QUANTITATIVE ESTIMATION THROUGH SIMULATION
Proceedings on Simulation in Business and Public Health, pp. 176-186, First Annual Conference of American Statistical Association and Public Health Association of New York City, 1966
Available from the American Statistical Association, c/o Miss Natalie Colabro, Look Magazine, 488 Madison Avenue, New York, New York for $4.95

By the use of a simulation model the authors study the effects of the selected factors, fecundability, secondary sterility, pregnancy wastage, postpartum non-susceptibility and mortality upon the reproductive history of birth cohorts of women. Among the conclusions suggested by the authors are: that detailed analysis of variability and mean levels for different subdivisions of data will promote a better understanding of the effects of such factors, that increased efforts of such factors, that increased efforts are needed to secure suitable data from different populations and that similar investigations under a variety of conditions are desirable. (A.R.N.)

METHODOLOGY IN THE ANALYSIS OF PERINATAL MORTALITY - THE PERINATAL MORTALITY EXPERIENCE IN THREE TEACHING HOSPITALS IN NORTH CAROLINA
The University of North Carolina, Chapel Hill, North Carolina, 1959
Available from U.M.I., document no. 59-5592
Xerox $7.40
Film reel $3.00

Medical, biological, and social factors from a pilot study of perinatal mortality are analyzed by several different methods in order to determine which one(s) to recommend for routine use in the analysis of causal and associative relationships in perinatal mortality. The methods used give different results possibly because of differences in underlying mathematical models and varying amounts of efficiency in analysis.

Discriminant analysis and regression analysis are recommended as the methods of choice. These two additive linear models seem best to satisfy intuitive notions of how the multitude of factors interact in causing a perinatal death. In addition, the results obtained by using these models are reasonably consistent with each other and with current obstetric knowledge.

Based upon these methods of analysis, the social and biological factors are not significant when the incidence of medical complications of pregnancy, labor, and delivery are held constant. Birth weight and length of gestation are consistently highly significant in determining outcome. The obstetric complications of pregnancy, labor, and delivery are highly lethal factors. (Author's abstract, adapted)

Hobbs, M. S. T.
SURVEY OF GENERAL-PRACTITIONER MATERNITY UNITS IN ENGLAND AND WALES
British Medical Journal, November, 1967, pp. 287-290
Available from original publisher

The results are given of a questionnaire survey of the 288 general-practitioner maternity units in England and Wales to determine the geographical relationship of G.P. units to consultant (specialist) units; to determine the direct liaison between the two types of units for selection of cases, provision of antenatal care, and complications in labor; and to assess the standard of facilities and equipment in the G.P. units.

Almost half the G.P. units were more than ten miles from a consultant unit. In nearly half the situations there was no formal liaison arrangement, however, consultants visited 74 per cent of cases of difficult labor. Prenatal care seemed to be linked to existence or not of prenatal clinics. One in five G.P. units did not have safe anesthetic facilities; one in three did not have facilities for intubation the newborn. (L.E.W.)

AUTOCLAVE AND FREE-FLOWING-STEAM SYSTEMS FOR HEAT TREATMENT OF INFANT FORMULA
U.S.P.H.S. Grant No. 1S01FR-05447-01
Public Health Reports, Vol. 82, No. 89, September, 1967, pp. 813-821
Available from original publisher

A free-flowing-steam unit was installed at the University of Michigan School of Public Health, in order to compare the bacteriological results in samples of formulas treated with a commercially available free-flowing-stem equipment with the autoclaving used in many hospitals. Eleven types of formula used each day at the University of Michigan Hospital were subjected to each heat treatment for a period of three weeks. It was found that microbiological sterility was not met by either system. Nonsterile formulas obtained with autoclave however could be attributed to chance, while results from free-flowing-steam were significantly different from sterility values expected by chance. No significant differences between the two systems were reported for nipple inversion. (A.R.N.)

Miller, Bruce J.
A COMPARATIVE STUDY OF THE UTILIZATION OF DIAGNOSTIC LABORATORY PROCEDURES IN A SELECTED GOVERNMENTAL OUT-PATIENT CLINIC AND A PRIVATE PHYSICIAN'S CLINIC
Program in Hospital Administration, University of Minnesota, Minneapolis, Minnesota, 1967
Available from U.M.I. Xerox $3.75
Film reel #2.22 $4.00

Amount of diagnostic laboratory procedures ordered for 116 outpatients in a private physician's metabolic clinic were compared to those ordered for 116 diabetic outpatients in a governmental diabetic clinic, using a weighting factor to measure utilization. Sample patients were over 40, had at least three clinic visits, and had not expired or been hospitalized during study period of January 1, 1965 through December 31, 1965. Initial visit of sample patients occurred before January 1, 1965. Study found significantly higher mean weighted laboratory test value for private physician's clinic than governmental clinic. Also at both clinics, physicians ordered more laboratory procedures for private paying patients than welfare recipients. Distance of residence from the clinic was not found to affect amount of laboratory procedures ordered. (D.F.B.)

FISCAL POLICIES IN THE MERCY HOSPITAL OUTPATIENT CLINIC
Graduate Program in Hospital Administration, Xavier University, Cincinnati, Ohio, 1966
Available from U.M.I. Xerox $3.00
Film reel #2.22 $4.00

This evaluation of fiscal policies in Outpatient Clinic at Mercy Hospital, Pittsburgh, included analysis of financial criteria for eligibility, rate structure, charging and collection procedures, accounting procedures and third-party reimbursement. Clinic served moderate to low-income group of people. Study found Clinic extended credit liberally, and collection and billing were done haphazardly, with no financial controls. Data on five outpatient clinics in surrounding areas are presented for comparative purposes. Study recommends adoption of cost accounting system relating costs to charges, initiation of registration-billing forms, evaluation of collection philosophy and installation of cash register for internal controls. (D.F.B.)

Stewart, Rosemary; Sleeman, Janet
CONTINUOUSLY UNDER REVIEW
G. Bell and Sons, Ltd., York House, Portugal St., London, W.C.2, England, 1967
Available from original publisher for $2.00

Report of an investigation of the effect of an official bulletin sent to hospital management committees in England and Wales suggesting waiting time standards for patients visiting outpatient clinics. Waiting time maximums were put at two weeks for an appointment, and one-half hour in the clinic. Of a sample of thirty hospital committees interviewed, eleven had a "positive approach" to the circular, nine did "almost nothing" and the remainder "came in between". Excessive waiting time was blamed on lateness of physicians, and making more appointments than could be cared for in allotted span of time. (L.E.W.)

Community Service Society of New York
A SURVEY OF TUBERCULOSIS PATIENTS IN THE SOUTH BRONX
Community Service Society of New York, 105 East 22nd Street, New York, New York 10010, 1966
Available from original publisher for $2.00

New York Community Service Society studied self-care health practices of 206 tuberculosis outpatients of Bronx Mott Haven Chest Clinic in 1962. Patients in sample were between 15 and 45, registered for treatment after January 1, 1959, living with immediate family and not active and contagious carriers of TB at time of interviewing. Typical patient was married, in early 30's, of Puerto Rican back ground, did not attend high school and had very modest income. Study found most serious impact of TB was its upsetting effect on patient's family and family relationships. One-fourth of patients were judged in poor health and showed signs of backsliding For seriously ill patients, study found cooperation of patients extremely necessary for satisfactory improvement, as only three out of ten non-cooperative patients made regular progress. Two items of the most gross non-cooperative behavior were unauthorized departures from hospital and persistent delinquency at the Clinic. Findings indicate TB is a lower class disease and patients do not get enough emotional support from doctors and clinical staff. Patients' knowledge of the disease was lacking and they saw a stigma attached to the disease. It is concluded social, economic and emotional problems are contributing to an increase of TB in lower classes. (D.F.B.)

SURVEY OF WELFARE CLIENTS TO DETERMINE NEED FOR HOME HEALTH AIDES
Public Health Reports, Vol. 82, No. 8, August, 1967, pp. 729-734
Available from original publisher

To determine the need for personal care services in the home among welfare recipients in Contra Costa County, California, social service case records were reviewed for all clients receiving attendant services in September, 1966. Validity of this method was subsequently confirmed when public health nurses made home visits to assess the needs of a subsample of the patients surveyed and concurred with thirty-five of forty evaluations made from a review of the records. Of a total of 821 clients, attendant care clearly was necessary for 715. Of these, 63.9 per cent apparently required primarily domestic services and 36.1 per cent will need home health aide services. (Author's Abstract)

AN INVESTIGATION OF THE ATTITUDE OF ADOLESCENTS TOWARD THEIR HOSPITALIZATION
Program in Hospital Administration, University of Minnesota, Minneapolis, Minnesota, 1967
Available from U.M.I. Xerox $4.50
Film reel #2.22 $4.00

Study compared attitudes of adolescents hospitalized in a special youth unit at Children's Hospital, San Francisco with those in a general nursing unit at nearby St. Mary's Hospital toward various aspects of hospitalization. Attitudes of male and female adolescents were compared. Findings from this study were compared to similar earlier study done in 1962. Sample included all adolescents, age 12 to 20, admitted from December 21, 1966 through January 31, 1967. No significant differences were found for: groups on two different nursing units; male and female adolescents; weekday vs. weekend hospitalization; holiday vs. non-holiday hospitalization; and attitudes at admission and discharge times. Although patients on youth floor expressed more dissatisfaction with interest shown by nursing staff and amount of activity available, author observed youth floor patients to be more relaxed in a hospital setting than those of the general nursing unit. Findings also indicate male adolescents resent establishment of too many rules. Some differences between this study and earlier one are noted. Appendices include questionnaire used and statistical data from study. (D.F.B.)

Green, Riley M., Jr.
A STUDY OF HOSPITAL VISITING FROM THE PATIENTS' VIEWPOINT
Program in Hospital Administration, University of Minnesota, Minneapolis, Minnesota, 1967
Available from U.M.I. Xerox $5.60
Film reel #2.23 $4.25

Visiting preferences of 853 inpatients at Rochester Methodist Hospital, Minnesota were studied to determine relationship between six patient-oriented aspects of visiting and fourteen patient characteristics. Variations in these relationships were further analyzed by three degrees of consanguinity between patient and visitor: immediate family; good or close friend; and other friends and acquaintences. Data were obtained from written questionnaires. Some major conclusions of study are: (1) there should be no limit on length of visits by immediate family, but not over one hour for good friends and one-half hour for other friends; (2) patients felt good friends and other acquaintences should be restricted to one or two visitors at a time; (3) patients preferred meal times and afternoon rest period be free from all visitors except for immediate family; and (4) majority of patients preferred their visitors to leave while they were being assisted by a nurse. Specific visiting policies are recommended based on findings from study. Appendices include questionnaire used and tables of statistical data computed in analyzing results of study. (D.F.B.)

Raphael, Winifred
DO WE KNOW WHAT THE PATIENTS THINK? A SURVEY COMPARING THE VIEWS OF PATIENTS, STAFF AND COMMITTEE MEMBERS
International Journal of Nursing Studies, Vol. 4, No. 3, August, 1967, pp. 209-223
Available from original publisher

Report of a survey conducted in the United Kingdom to compare the view of patients about their conditions with the views of hospital personnel about conditions for patients. The unstructured individual interview conducted by an interviewer not associated with the hospital was the survey method selected to sample opinions of patients and staff personnel of four general non-teaching hospitals, one from each of the Metropolitan Regions of London. Survey shows that most patients were satisfied with the care they received and that they felt the most urgent improvements needed were in matters dealing with ways of passing time. On the other hand hospital personnel felt that patient care was unsatisfactory and that the most urgent improvements needed were in areas of patient care and physical environment. Survey concludes that many of the improvements most often suggested by patients would be introduced with little expenditure of money. Tables, numbers, and types of people interviewed, distribution of ratings by groups and important areas of change are included in the report. (A.R.N.)

Xerox $9.00
Film reel $3.00

The report of a study conducted on a random sample of 100 male patients with a somatic illness hospitalized in a general hospital to determine the behavioral response to role socialization in the hospital.

The tool used to elicit behavioral response to adult socialization was Patient Response to Role Socialization Inventory, designed to measure four socio-cultural factors. These were indexes of family orientation, occupational responsibility, value, and social position. The degree of illness was considered to have a relationship to response to role socialization also.

Author concluded the "findings revealed that family and occupational role deprivation did not affect significantly the pattern role response patterns in the hospital, but factors associated with social class, cultural orientation and degree of illness had very significant bearing on behavioral response to learning the patient role". Howard, John K.
HOSPITAL EMPLOYEE PATTERNS OF SICK ABSENCE
Program in Hospital Administration, The University of Michigan, Ann Arbor, Michigan 48108, 1967
Available from U.M.I. Xerox $5.65
Film reel #2.23 $4.25

An exploratory study to discover what patterns exist in hospital employee sick absence which might be useful as management tools.

Two basic questions were asked: (1) Does sick absence as observed in certain hospital departments exhibit definite patterns in retrospective or concurrent time periods? (2) Can the prospective time of occurrence, group affected, and amount of sick absence be predicted?

Departments studied were nursing, housekeeping, laundry and dietetics. The job classification of "aide" in each of the four departments provided a comparison of absence between departments for a similar group of employees. The nursing department was studied in its entirety for comparison of absences between professional groups within one department. A third grouping for study was six separate groups of aides in the dietetic department, all of whom had different supervision. The organizational setting was Harper Hospital, Detroit, Michigan, a private, voluntary, non-profit general hospital with seven hundred beds and 1,650 full-time employees. A sample group of 754 employees were selected for analysis.

The number of sick days for any group in the nursing department is subject to variation of as much as fifty per cent increase or decrease from month to month. A seasonal pattern of sick leave usage exists for the number of persons absent, but not for total days absence. The lowest skilled employees show a more consistent and pronounced seasonal pattern. Between 80 and 90 per cent of all absences are one day in length, and the most "absent days" are Saturday and Sunday. A comparison among six homogeneous groups of dietetic workers produced marked evidence of variation within a single department among different supervisors. Repeatable patterns were found to exist which can be identified with a particular group of employees though the exact time of occurrence of particular patterns is difficult to predict. A series of recommendations for improving management information of sick absence utilization and for improvement of the pattern of sick absence are presented. (S.F.L.)

Ferrell, Edward Shinault
INSTRUMENTS FOR PREDICTING TURNOVER AND ABSENTEEISM OF HOSPITAL EMPLOYEES
School of Health Services Administration, University of Alabama, Birmingham, Alabama, 1967
Available from U.M.I. Xerox $5.05
Film reel #2.24 $6.75

A study of turnover and absenteeism as functions of age, sex, education, marital status, salary, race and dependents was made of fulltime employees at University of Alabama Hospital for two periods of time during January 1, 1964 through August 31, 1966. Employees were classified into three skill levels which are described and then sub-classified for above mentioned factors. Skill levels by gross classification as to training were: (1) high school not necessary; (2) high school or technical training; (3) college education or extensive experience. Study found at lowest skill level greatest employee stability is secured by hiring older people. At this level however, absenteeism tends to increase with age. In skill levels two and three turnover rates decreased with age. Absentee rates were somewhat irregular, but pattern suggests rates are lowest for youngest and oldest employees. Turnover rates for white males under 25 were extremely high in skill levels one and two, but fairly stable in level three. Study found virtually no non-white males employed for skill levels two and three. Generally for white females there is pattern of lower turnover as skill level and age increase. Non-white females' turnover rate is highest at highest skill level and several possible reasons for this are discussed. Appendix includes numerous tables of statistical data comparing skill levels by various factors studied. (D.F.B)

INSTITUTIONAL EMPLOYMENT AND SHORTAGES OF PARAMEDICAL PERSONNEL
U.S.P.H.S. Grant No. CH 00146
Bureau of Business and Economic Research, Northeastern University, Boston, Massachusetts, 1967
Available from original publisher for $1.50

Study designed to make a broad survey of paramedical personnel employed by Northeastern University and the Greater Boston area hospitals. Analysis of over-all employment covers thirteen major groups of skills and thirty-three job classifications; employers include all licensed hospitals, nursing homes, clinics, infirmaries, and medical laboratories. Data show that demand for paramedical personnel will increase faster than supply; results will be used in planning new training programs for paramedical skills. (S.P.)

Clarke, Kenneth R.
AN ANALYSIS OF THE ASSOCIATION OF EMPLOYEE ATTITUDES WITH SPECIFIC EMPLOYEE CHARACTERISTICS IN A HOSPITAL SETTING
Program in Hospital Administration, University of Minnesota, Minneapolis, Minnesota, 1967
Available from U.M.I. Xerox $4.05
Film reel #2.24 $6.75

Attitudes of 566 employees and forty-two supervisors of San Jose Hospital (California) were surveyed by questionnaire to determine if differences exist according to factors of sex, department, length of employmen, education, shift worked, and whether full or part-time. Responses to twenty-five questions concerning administrative practices, supervision, working conditions, and job satisfaction were scored from 0, strongly negative, to 4, strongly positive. Study found no significant differences in attitude according to sex, education or full or part-time status. Certain departments showed significantly more positive attitudes and several demonstrated significantly more negative attitudes. Supervisors, employees with five or more years service, and employees of day shift exhibited significantly positive attitudes. Questionnaire included. (D.F.B.)

WORK INJURIES IN A MEDICAL ORGANIZATION
Archives of Environmental Health, Vol. 15, November, 1967, pp. 554-561
Available from the American Medical Association, 535 North Dearborn Street, Chicago, Illinois 60610 for $1.25 per copy

A study work injuries sustained by the personnel of the Hadassah Medical Organization in Jerusalem, Israel, during a ten-year period (1955 to 1965). The study was based upon routine records.

The mean annual injury rate was 7.9 per 100 workers. There was a marked rise in the annual injury rate during the period studied. The occurrence of injuries was related to month, day of the week, hour of the day, occupational category, sex, and possibly length of service. The severity of injuries was related to occupational category and age.

The practical implications of the findings are discussed. Consideration is given to the possibility that the rise in the incidence rate was related to the growth and consolidation of the institution during this period. (Editor's Abstract)

Levey, Samuel
CONFLICT AND ORGANIZATION: SOME ASPECTS OF CONFLICT IN HOSPITALS
State University of Iowa, Iowa City, Iowa, 1961
Available from U.M.I., dissertation no. 61-1926
Xerox $13.50
Film reel $ 3.80

A major object of this work is to locate disruptive factors in the hospital enterprise with eventual perspective directed toward reappraisal and re-evaluation of existing structures.

The investigation is based on responses to a questionnaire and subsequent limited interviews. The respondents are categorized in terms of three major hospital groups: administrators, directors of nursing service, and physicians.

Conflicts of attitude and ideology may account for a major proportion of the group and interpersonal differences which arise in the hospital. It is proposed that resolution of such conflicts must be primarialy founded upon: (1) superior strength of educational back ground among professionals and paramedical personnel in the hospital, and (2) excellence of management in the organization. (Author's abstract, adapted)

HOSPITALS IN TRANSITION
Welsh Hospital Board, "Carville", The Avenue, Llandaff, Cardiff, Wales
Available from original publisher

A survey made to determine the readiness of the staff employed in food, laundry and plant services "in Welsh hospitals to meet the change proposed by the hospital plan". Questionnaires and interviews were issued to elicit information on attitudes and opinions of 324 personnel (mainly supervisory) of engineering and maintenance, dietary, housekeeping, and laundry departments in respect to planned and anticipated changes in building and operation: age, training, and deployment of personnel were also noted. The committee used survey findings as a basis of recommendations to the Ministry for training in craft skills and management, for recruitment, promotion, working conditions, salaries, and for communication of opinions of departmental managers upward in the hierarchy. See also PE0049. (L.E.W.)

Gross, Llewellyn A.; Yeracaris, Constantine A.; Grosof, Elliott H.
SOCIAL CAUSES OF LABOR TURNOVER IN MODERN HOSPITALS
U.S.P.H.S. Grant No. HM-00123
Department of Sociology, State University of New York at Buffalo, Buffalo, New York, 1966
Available from U.M.I. Xerox $14.50
Film reel #2.24 $ 6.75

Report summarizes major findings of a four year study of total personnel in one hospital and selected samples from three others. The following types of data were obtained to determine most likely factors associated with labor turnover in the modern hospital: organizational characteristics of employment; demographic characteristics; social characteristics; socio-psychological characteristics of organizational behavior; and orientation toward social norms. Report evaluates incluence of each factor on participant's behavior individually. Both general and specialized theories of labor turnover are then presented as interpretations of the findings. The specialized theory offers a status-linked theory of labor turnover. Intra-organizational mechanisms are viewed as anchoring individuals in the organizational setting. The three types of anchorage related to labor stability in decreasing order are: authority anchorage, co-worker anchorage, and clientele anchorage. The relationship of low, intermediate and high status groups to anchorage mechanisms is described. The general theory of labor turnover holds the more constant, similar and close the relationship between the environment of persons, things and symbols and a participant's actions and attitudes, the more likely will he remain in it. Therefore, those quickest to move from job to job are those whose group ties are different, inconstant and distant. Specific applications of those principles to empirical findings of this study are presented. Included is a case application of the general theory. Appendices include description of methodology, a few working papers on marginal interpretation, propositional summary of all findings and tabular summary of the data. (D.F.B.)

Scott, Walter E., Jr.
HOSPITAL RECRUITMENT AND EMPLOYMENT PRACTICES COMPARED WITH ANNUAL TURNOVER RATES OF NURSE AIDES AND ORDERLIES
Graduate School of Public Health, University of Pittsburgh, Pittsburgh, Pennsylvania, 1965
Available on loan from Asa S. Bacon Memorial Library, American Hospital Association, 840 North Lake Shore Drive, Chicago, Illinois 60611, 1965

A study made in ten non-federal short-term general hospitals of approximately 200 beds each in Pittsburgh area to relate, if possible, the hiring procedures used by the various hospitals to the annual personnel turnover rate of nurse aides and orderlies.

Interviews were held with personnel officials of the hospitals with focus on the role of the personnel officials, wages paid aides and orderlies, sources of potential employees, screening of applicants, checking of references, selection ratio, training, merit rating, and employee separations.

Author concluded there was "no demonstrable relationship between the factors studied and the annual turnover rate" and the "no factor could be related to turnover with any degree of certainty whatsoever". (L.E.W.)

SUPERVISORY TRAINING
Supported by an original grant from the W. K. Kellogg Foundation through the Hospital Research and Educational Trust of the American Hospital Association
Office of Continuing Education, Program in Hospital Administration, University of Minnesota, Minneapolis, Minnesota
Available from U.M.I. Xerox $25.05
Film reel #2.25 $ 7.00

Report describes and evaluates a program for teaching principles of supervision with hospital applications, coordinated by University of Minnesota. The program was conducted in five nearby colleges and included fifty hours of classroom teaching: twenty for lecture and thirty for discussion, case work and application, The approach to supervisor training was similar in structure among the five colleges, but there were individual differences in emphasis and teaching methods used. Report includes syllabus and report of programs followed in each college. An evaluation of the programs was made by administering a questionnaire to trainees and their superiors before and after taking the course. Findings indicate that while there were no major changes in students' perceptions of their institutions and superiors, there were substantial changes in job knowledge. There were also documented changes in knowledge, skill, attitudes and practice of supervision reported by both students and superiors. It is concluded decentralized educational programs, using local faculty, produce desired changes in supervisory skills and nationwide programs of this type are recommended. Cooperation of state hospital associations, local advisory committees, local educational institutions and Office of Continuing Hospital Education is emphasized as necessary to an effective program. A PILOT STUDY OF RELATIONSHIPS OF EMPLOYEE PAY GRADE, DEPARTMENT, AND VACANCIES TO OVERTIME
Program in Hospital Administration, University of Minnesota, Minneapolis, Minnesota, 1967
Available from U.M.I. Xerox $3.15
Film reel #2.26 $5.25

Hours or work data were collected for employees of Nursing, Supply, Engineering, and Housekeeping departments at Johns Hopkins Hospital during October, November, December, 1966 to develop methods for measuring and evaluating overtime and to determine if an association exists between an employee's department, pay grade and vacancies and amount of overtime worked. (Study period occurred before Federal legislation requiring time and a half pay for overtime took effect.) The number of vacancy hours were determined by subtracting the straight time hours from the number of budgeted hours for a position. For each pay grade in the four departments, study calculated vacancy factor (percentage of straight time to budgeted time); overtime rate (percentage of overtime hours per total time); and overtime per vacancy ratio (overtime hours divided by vacant hours). Findings indicate overtime and overtime per vacancy are not directly proportional to pay grade. Degree of correlation does vary, however, with the various departments. Also no significant similarities of overtime per vacancy ratio among equal pay grades in different departments were found. It is concluded, however, vacancies offer some explanation of overtime and vacancy is an acceptable unit by which to measure overtime utilization. (D.F.B.)

Dalton, James E., Jr.
A STUDY TO DETERMINE THE PROBABLE INITIAL EFFECTS OF FEDERAL MINIMUM WAGE COVERAGE UPON THE NON-GOVERNMENT HOSPITALS IN CENTRAL VIRGINIA
School of Hospital Administration, The Medical College of Virginia, Richmond, Virginia, 1966
Available on loan from Library of American Hospital Association, 840 North Lake Shore Drive, Chicago, Illinois 60611

A structured interview was used to gather data from a sample of twenty-one community and five proprietary hospitals of central Virginia. The purpose was to determine: the current status of the sample hospitals in relation to proposed Federal minimum wage coverage; the initial effects of such legislation on the sample hospitals; and to determine what preparatory measures could be carried out to diminish the "traumatic" effects of the law. Twenty-two of the sample hospitals were found to have minimum wage levels below the Federal minimums. Job evaluation, review of work standards, study of overtime patterns were suggested as needed studies before law goes into effect, and before adjustments of charges to patients are made. Appendix contains structured interview guide. (L.E.W.)

INCREASING PRODUCTIVITY IN HOSPITALS: A CASE STUDY OF THE INCENTIVE PROGRAM AT MEMORIAL HOSPITAL OF LONG BEACH (CALIFORNIA)
Center for the Study of Productivity Motivation, School of Commerce, 854-856 Van Hise Hall, The University of Wisconsin, Madison, Wisconsin, 1966
Available from original publisher for $3.00

Report describes and evaluates incentive program installed in 1961. The MERIT plan (Memorial Employees Retirement Incentive Trust) is financed by salary deductions and employer contributions. This plan provides benefits to participating, eligible employees and beneficiaries upon retirement, disability or death. A formula for determining amount of hospital's contribution was devised. A base figure, determined by dividing total controllable expenses by total operating revenue, was compared with the percentage calculated for the present year and the difference yielded the efficiency improvement percentage. Hospital's contribution was this percentage times the total payroll for the year within specified limitations. Management techniques used to acquaint and interest employees in the program are described. Discussion also includes accounting and budgeting procedures followed in administering the MERIT plan. Financial analysis of plan indicates employees have gained substantially in accumulated assets, while labor turnover has been reduced and costs have been kept down below those of comparable area hospitals. (D.F.B.)

ROLE EXPECTATIONS OF REGISTERED NURSES AS A CONSEQUENCE OF UNIONIZATION
Graduate Program in Hospital Administration, University of California, Berkeley, California, 1967
Available from U.M.I. Xerox $3.00
Film reel #2.26 $5.25

The effect of unionization activity on role expectations of registered staff nurses was studied by questionnaire in two moderately-sized, general, acute hospitals in a California metropolitan area. Six areas of role expectations were studied: changes in style of supervision; emergence of shop steward; changes in grievance procedures; changes in job satisfaction; changes in importance of membership in California Nursing Association; and an open question for individual comments. Respondents were differentiated from scores on questionnaire according to three sociological types: professional nurse; bureaucratic nurse; and traditional nurse. Characteristics of these three types are described. Findings indicate 51.3 per cent of nurses were classified as professional, 7.7 per cent bureaucratic, and 41 per cent traditional. Differences in perceptions of changes in role behavior among three types of nurses were subtle and sometimes non-existent. It is generally concluded nurses expect a little less formality in supervision, the emergence of a counterpart to the shop steward, more formilized structure of grievance machinery and increased job satisfaction (particularly income benefits) as a consequence of unionization. It is also concluded that these expectations indicate unionization has not detracted from professionalism of nurses. Copy of questionnaire is included. (D.F.B.)

LABOR UNIONS IN VOLUNTARY NONPROFIT HOSPITALS IN THE CITY OF NEW YORK
Graduate School of Public Administration, New York University, 4 Washington Square, New York, New York, 1966
Available from U.M.I. Xerox $5.70
Film reel #2.26 $5.25

This study presents an overview of the extent of unionization of non-professional employees in voluntary hospitals in New York City from May 6, 1959 through December 31, 1965. (Amendments to New York State Labor Relations Act in 1963 and 1965 gave hospital employees the right to bargain collectively.) A brief outline of collective bargaining in hospitals in the U.S., pertinent labor legislation and court rulings are presented as background. In addition, a case study of St. Clare's Hospital's experience with unionization attempts by several locals is described. The principal problems concerning labor relations, legislation, employees and administrative policy which hospitals faced before, during and after changes in labor legislation are examined. Data indicate forty of ninety voluntary non-profit hospitals in New York City now have collective bargaining agreements. A summary of content of those agreements is presented. Another concludes unionization in inevitable, but there are some parts of the country where there will be no union activity in hospitals in the near future. (D.F.B.)

Levine, Solomon
THE RELATIONSHIP BETWEEN PERSONALITY AND EFFICIENCY IN VARIOUS HOSPITAL OCCUPATIONS
New York University, New York, New York, 1951
Available from U.M.I., document no. 2510
Xerox $11.50
Film reel $ 3.00

An early (1951) study undertaken to explore the relationship between personality and efficiency as an employee in three hospital occupations. A total of 158 subjects were studied including sixty-nine hospital attendants, forty-six food service workers and forty-three clerical workers employed in a large Veterans Administration Hospital in New York City.

The order of merit ranking was employed as the criterion measure. Each subject was ranked by two independent qualified raters on the basis of job efficiency. Three personality measures, the Minnesota Multiphasic Personality Inventory (group short form), the Cornell Index and the Graphomotor Projection Test, and one intellectual measure, the SRA Primary Mental Abilities (Intermediate form A H) were administered.

A variety of statistical techniques were employed to determine whether significant relationships exist between efficiency and the personality and intellectual factors measured by the battery of tests. These techniques included the test of significance, the chi-square test and correlation analysis. The test of significance was used in comparing the test scores of the highest and lowest ranking 25 per cent, 33 1/3 per cent and 50 per cent of the population of each occupational category.

No significant relationship was discovered between personality and hospital attendant efficiency. None of the personality tests differentiated between efficient and inefficient hospital attendants. Intellectual factors, however, consistently differentiated between efficient and inefficient subjects. The efficient hospital attendant achieved significantly higher mean scores on each of the Primary Mental Abilities. (Author's abstract, adapted)

AN EXPERIMENT IN DETERMINATION OF STAFF LEVELS IN THE PHARMACY AT USAF HOSPITAL WRIGHT-PATTERSON
Program in Hospital Administration, The University of Michigan, Ann Arbor, Michigan 48108, 1967
Available from U.M.I. Xerox $4.95
Film reel #2.27 $6.25

The purposes of this study are (1) to ascertain what effect the application of the *Michigan Pharmacy Methodology* could have on current staffing of an Air Force Hospital Pharmacy, (2) to ascertain if the pharmacy staffing methodology can be successfully used to analyze work load and assess staff requirements in an Air Force Hospital Pharmacy, and (3) to evaluate the potential applicability of the pharmacy staffing methodology to other Air Force Hospital pharmacies. The pharmacy staffing methodology was applied to the activities of the pharmacy at USAF Hospital, Wright - Patterson Air Force Base, Ohio. The study found that the pharmacy staffing methodology can be applied to a U. S. Air Force Hospital successfully, and that its use revealed significant staffing information which has not been previously obtained. Author concludes that this, and other, staffing methodologies should be used as a complement to the composite work-unit technique of determining necessary staff levels. (S.F.L.)

A STUDY OF PATIENT CARE INVOLVING A UNIT DOSE SYSTEM
U.S.P.H.S. Grant No. HE-00328-01
College of Pharmacy, University Hospitals, The University of Iowa, Iowa City, Iowa 52240 1967
Available from U.M.I. Xerox $11.25
Film reel #2.27 $ 6.25

A report consisting of a series of substudies at the University of Iowa Hospitals, all bearing on the establishment and evaluation of a unit dose drug distribution system using decentralized pharmacy ward substations. The system entails direct order from the physician to the pharmacist, and direct preparation of single dosages in pharmacy substation at proper time of administration of medicine. The pharmacist maintains a complete patient medication record and interprets all medication orders.

Some of the substudies include: medication errors and discrepancies in conventional method vs. unit dose system; utilization of RN time in two systems; consultative activity of the pharmacist in the two; efficiency of the charging systems; comparative drug inventories; planning and comparative floor space needed; costs of unit packaging; order forms and communication of medication orders; educational aspect of pharmacy and nursing and attitude studies of staff affected.

After a ten-month study the investigators concluded the unit dosage system based in pharmacy substations did improve the safety of the medication cycle; improved the total communication of medication orders; improved the availability to physician and nurse of medication information; freed nursing time; and revealed relative costs, and space and inventory needs. The study will be continued and refined over a two-year period. The appendix contains specimens of forms and procedural instructions. (L.E.W.)

Gautreaus, Ronald; Watkins, C. Eugene
A SURVEY OF NARCOTIC CONTROL IN HOSPITALS
American Journal of Hospital Pharmacy, Vol. 24, October, 1967, pp. 567-573
Available from original publisher

Study designed to obtain information from hospitals of 100 beds or more in Louisiana. Hospital pharmacists and nurses were contacted by questionnaire and responses were tabulated and evaluated. An obvious degree of similarity was noted in procedures employed for handling narcotics by nurses. The pharmacists' procedures, however, differed in several respects. Several recommendations are made based on the study. Each recommendation pertains to suggested policies which should be studied by the hospitals for benefits which could be derived. Typical of these recommendations are the more widespread use of single-unit packaged narcotics (this would be dependent upon the availability of such products) and the use of a perpetual inventory system. Both these measures would increase control over narcotic drugs in the hospital. (Author's abstract, adapted)

EVALUATION OF A METHOD OF PRESCRIBING DRUGS IN HOSPITAL AND A NEW METHOD OF RECORDING THEIR ADMINISTRATION
The Lancet, 1/7491, pp. 668-671
Available from original publisher

'Medicine lists' in the Aberdeen General Hospitals have been dispensed with, and a single prescription sheet is used for the administration of drugs. This system has been evaluated over an eighteen-month period. Instructions could be accommodated on a single sheet for 95 per cent of patients. A satisfactory reponse was obtained to recommendations on printing drug names, use of the metric system, and signing of prescriptions by a doctor. Introduction of the system resulted in a 50 per cent saving in time spend on this aspect of drug administration. The next step was to devise a system of recording drugs administered. This was achieved for 'regular' drugs by

designing a separate recording sheet. A preliminary trial indicated a true error-rate of about 2 per cent could be attained. Use of the recording sheet reduced the saving in nursing-time to 40 per cent, on average. With the introduction of these two sheets, the way is now clear for more detailed studies of drug administration. (*Excerpta Medica,* Section 17, Volume 13, No. 10, October, 1967, pp. 769, no. 4959)

Vere, D. W.
PRESCRIBING SYSTEMS IN HOSPITAL
Journal of Royal College of Physicians of London, April, 1967, Vol. 1, No. 3, pp. 244-253
Available from original publisher at 12 Pall Mall Street, London S.W.1, England

The London Hospital found that there was a considerable rate of error in drug administration. A work study revealed that experts differed in their interpretations of prescriptions, and communication between stages of drug administration broke down. It was decided to try the following changes in routine: (1) the pharmacists would be invited to establish a service within the ward; (2) new prescription sheets would be provided; (3) the number of daily drug rounds would be cut down; (4) a lockable drug trolley would be introduced; (5) drug administration could be delegated to senior student nurses; (6) the metric system and official drug names would be used when possible; and (7) obscure prescribing terms, longhand writing and abbreviations would be disallowed. The new system reduced the overall rate of errors by about two-thirds. There are twelve references to the literature. (*Hospital Abstracts,* (London), Abstract no.1918, p. 643, November, 1967.)

A STUDY PERTAINING TO PATIENTS WITH PSYCHIATRIC DIAGNOSES DISCHARGED FROM A RURAL COMMUNITY HOSPITAL WITHOUT PSYCHIATRIC FACILITIES
The Program in Hospital Administration, University of Minnesota, Minneapolis, Minnesota, 1967
Available from U.M.I. Xerox $3.00
Film reel #2.28 $5.50

This study compared patients discharged with psychiatric diagnoses from a rural community hospital without psychiatric facilities to those discharged from a metropolitan community hospital without psychiatric facilities. It is hypothesized the rural hospital will discharge more patients with both primary and secondary psychiatric diagnoses than a metropolitan hospital will. Data from three metropolitan hospitals were averaged to provide a comparison between a "typical" metropolitan hospital and a rural hospital (Frederick Memorial, Maryland). Findings substantiate study's hypothesis. A comparison was also made of proportion of psychiatric consultations requested in the two types of hospitals. Data indicate there was no significant difference in this regard between the two types of hospitals. Analysis of psychiatric diagnoses of rural patients indicates predominant diagnoses are psychoneuroses and psychophysiological disorders while alcoholism and schizophrenia predominate in other institutions. Views of medical staff in study hospital toward mental health problems are discussed. It is concluded rural areas warrant special consideration in developing mental health studies and programs. (D.F.B.)

AN ANALYSIS OF SOCIAL NETWORKS AS FACTORS INFLUENCING THE HOSPITALIZATION OF MENTAL PATIENTS
Columbia University, New York, New York, 1961
Available from U.M.I., order number 61-3883
Xerox $9.00
Film reel $2.75

A study is made of the impact of the behavior of the mental patient on the structure of the social units in which he participates, and of the ways in which the characteristics of these structures may be expected to determine the responses made to his behavior. The sample studied consists of Negro and Jewish psychotic patients primarily from one New York City hospital. Primary attention is given to the most intimate unit of which the patient is a member, usually a nuclear family. Several hypotheses regarding speed of hospitalization, agent responsible for hospitalization of the patient, and social responses other than hospitalization are considered as functions of differences in the structures of social units and of the patients' positions in their units. These hypotheses are tested on both the Negro and the Jewish groups, since they are expected to hold independently of subcultural differences. It is found for both groups that hospitalization occurs sooner for patients in narrowly-defined positions; that responses involving structural change in the unit are more likely to occur if ties with the patient are close; and that severance of ties with the patient is less likely to occur if ties are interconnected.

In addition, the Negro subculture is considered to be more deviant than the Jewish subculture from the dominant code, and the effects of disparity of codification on symptom patterns and on frequency and duration of hospitalization are analyzed. Comparison of the Negro and Jewish groups indicates that hospitalization is more frequent, of shorter duration, and for more overt symptoms for a group whose norms are further from the dominant code. PSYCHIATRIC CARE IN CANADA: EXTENT AND RESULTS
Royal Commission on Health Services, Ottawa, Ontario, Canada, 1964
Available from Queens Printer, Ottawa, Ontario, Canada for $4.50

This survey of the "extent and results" of psychiatric care in Canada focuses on the clinical attention received from psychiatrists and other physicians and evaluates this care quantitatively. Indices for the evaluation were rates of separation and readmission, retention ratios, and hospital utilizations. A study was included of the experience of members of prepared medical insurance plans in terms of costs and duration of psychiatrists' care, and volume of medical care prior and subsequent to psychiatric attention. The system of national mental health statistics was reviewed in regard to information needed for program planning and evaluation. (L.E.W.)

Levenson, Myron Herbert
A SOCIOLOGICAL STUDY OF THE PSYCHIATRIC HOSPITALIZATION OF AGED PERSONS IN WESTERN NORTH CAROLINA
The University of North Carolina, Chapel Hill, North Carolina, 1966
Available from U.M.I., document no. 67-1018
Xerox $7.40
Film reel $3.00

A demographic and ecological approach consisting of the arrangement of counties in seven groups according to size of largest population center (thus providing an urbanization gradient) is utilized to investigate the social background of the hospitalization of aged psychiatric patients. Assuming status decline to be important in poor adjustments to later life the following status characteristics, sex, location of residence (rural-farm, rural-nonfarm, urban), marital status, educational level, and occupation are utilized as intervening variables in attempting to explain variation in incidence of psychiatric hospitalization.

Data were obtained from hospital admission records on I.B.M. cards supplied by the North Carolina State Hospitals Board of Control and from the U.S. Census of 1960.

Findings indicated that all the variables used in the study are, singly or combined, of importance in explaining psychiatric hospitalization of the aged. Although variation in residence area (the seven groups of counties) proved to be a significant factor the gradient principle did not appear to be of general use in such a study. (Author's abstract)

FAMILY PLANNING ASSISTANCE TO LOW INCOME PSYCHIATRIC PATIENTS IN GENERAL HOSPITALS: AN EXPLORATORY STUDY
Michigan Medicine, September, 1967, pp. 1071-1075
Available from original publisher

The responsibilities of counseling and referral for family planning services assumed by psychiatric personnel were ascertained in 1964 as part of a survey sponsored by the Committee on Family and Population Planning of the Maternal and Child Health Section, American Public Health Association. The study was of family planning assistance for low-income patients in all of the twenty hospitals and associated clinics with obstetrics-gynecology residencies in a midwestern metropolitan area. The factors determining the nature and extent of the assistance were discussed. (L.E.W.)

ESTIMATION OF THE OUTCOME OF A STANDING MENTAL HOSPITAL POPULATION
British Journal of Prev. Soc. Med., 1967, 21/2, pp. 56-65
Available from original publisher

A review of surveys of mental hospital populations for planning purposes showed discrepancies in conclusions and in interpretation of results. Methods of estimating the attrition of a standing mental hospital population are examined and a method using direct estimates of probability of separation from hospital detailed. Results of application to North-East Scottish mental hospitals showed a curvilinear outcome with a relatively short period required to halve the population but a very long one to eliminate it. Marked differences were found between various age and sex groups. Little change was observed in projected outcome in the period 1956-1964. The projected age and sex composition was obtained for the 1964 population of North-East Scottish mental hospitals at intervals of ten years. The reliability and validity of the method and the results are discussed and some applications mentioned. (*Excerpta Medica*, Section 17, Volume 13, No. 9, September, 1967, pp. 699, no. 4538)

THE BROOKLYN DAY HOSPITAL: AN EXPLORATORY STUDY
Columbia University, New York, New York, 1961
Available from U.M.I., dissertation no. 61-1069
Xerox $9.45
Film reel $3.00

A study to explore the nature and function of the Brooklyn Day Hospital for psychiatric patients. Data were collected from open-end interviews of eighty patients and relatives. The patients were schizophrenic, previously admitted to a state mental hospital, were between ages of 18 and 50, and attended the day hospital at least five days of first calendar month following admission during study period. The author summarized data from the interviews in seventeen conclusions as to patient response to situations, treatments, progress, and relationships to staff at Day Hospital. Author indicated additional casework and a social club for discharged patients for continuing support were needed. (L.E.W.)

STAFFING STANDARDS FOR PUBLIC MENTAL HOSPITALS VOLUMES I AND II
California Department of Mental Health, 1500 Fifth Avenue, Sacramento, California 98514 1967
Available from original publisher

This two volume report summarizes an eighteen month study by California Commission on Staffing Standards for State Mental Hospitals. Data were compiled through time and work sampling studies made on example wards considered representative of the whole system. In addition, professional staff personnel kept a diary of activities over a seven-day period, representing nearly 8,000 man days. Detailed task inventories were prepared by hospitals and data from fourteen private hospitals were compared with state institutions. Results of study establish basic levels of treatment staff time necessary to furnish adequate medical care to anyone who is so seriously ill or handicapped he enters a hospital for mentally ill or retarded. Volume I includes findings, conclusions, recommendations, numerical standard values developed, appendix and bibliography. Volume II describes SCOPE (Staffing Care of Patients Effectively) the system developed by this study which uses computer programming to determine ward nursing service staff requirements. (D.F.B.)

Silver, Helen Goodman
A FACTOR ANALYTIC STUDY OF PATIENTS' RESPONSES TO SELECTED ASPECTS OF HOSPITALIZATION IN A LARGE NEUROPSYCHIATRIC HOSPITAL
New York University, New York, New York, 1966
Available from U.M.I., document no. 67-635
Xerox $6.60
Film reel $3.00

This study was concerned with the encounter between the mental patient and the mental hospital as seen from the perspective of the patient. The major adaptational tasks confronting individuals entering a mental hospital were defined. It was proposed that each patient must formulate his own position toward the issues raised by these tasks. Extensive interviews were conducted with patients in residence at the hospital under study focused around these tasks. A representative sample of attitude-opinion statements was then compiled, based on these interviews, and a questionnaire developed to assess patients' degree of agreement or disagreement with these statements.

The respondents were 187 male patients drawn randomly from the closed and open wards of four buildings at a large neuropsychiatric hospital. When the matrix of item intercorrelations was subjected to centroid factor analysis followed by varimax rotation to orthogonal simple structure, four salient factors emerged accounting for 36 per cent of the total vairance. The factors were labeled: "Disaffected Alienation"; "Sick Role"; "Psychiatrically Enlightened Optimism"; and "Disillusioned Pessimism". Scales were developed to measure each of the factors, the reliability and validity of which were deemed adequate for the purpose of both group and (with one exception) individual measurement.

An operational definition of a good hospital adjustment was developed based on nursing aides' completion of the questionnaire under instructions to respond as would the kind of patient the aide enjoys working with. The reliability of the resulting twenty-six item measure, which was defined as Conformity with Aides' Hospital Adjustment Ideal (CAHAI), was adequate. The items constituting this measure covered the full range of adaptational tasks defining hospitalization in this study.

Hypotheses were tested relating factor scores to the following variables as a contribution to the construct validity of the obtained factors: age, diagnosis, education, hospital history, discharge, treatment atmosphere, and CAHAI.

Apart from the specific findings, this study demonstrated that the chronic hospitalized mental patient is suitable for socialpersonality investigations of this sort and should no longer be neglected on the grounds that he is too confused, regressed, or out of contact with his surroundings. Peterson, Donald Robert
PREDICTING HOSPITALIZATION OF PSYCHIATRIC OUTPATIENTS
University of Minnesota, Minneapolis, Minnesota, 1952
Available from U.M.I., document no. 4348
Xerox $6.40
Film reel $3.00

The investigation constitutes an attempt to devise simple, widely applicable, and maximally accurate indices to aid in predicting hospitalization of psychiatric outpatients. Data were gathered at a V. A. mental hygiene clinic for all patients who underwent psychological examination, were seen for at least two interviews by clinic staff members, and later were admitted to psychiatric hospitals. In all, 108 such patients were found. They were compared with 114 non-hospitalized patients at the same clinic in terms of certain non-psychometric data and the results of three psychological tests, the Wechsler-Bellevue, the M.M.P.I., and the Rorschach.

Three forms of "short" index were derived, one consisting only of non-psychometric variables, one consisting only of M.M.P.I. signs, and one comprising both non-test and M.M.P.I. factors. The non-psychometric device correctly classified 65 per cent of the cases in the total sample, the M.M.P.I. index was accurate for 67 per cent, and combination of indices yielded 71 per cent accuracy. Choice will be dictated by the amount of data available. If no tests have been given, the non-psychometric index is applicable; if prediction is required and an M.M.P.I. profile is all that the clinician has to work with, he must use the corresponding sign list; if both kinds of data are available, predictive accuracy can be increased by using the combined index. (Author's abstract, adapted)

Daniel, Wayne Wendell
THE USE OF DEMOGRAPHIC CHARACTERISTICS IN PREDICTING LENGTH OF STAY IN A STATE MENTAL HOSPITAL
The University of Oklahoma, Norman, Oklahoma, 1965
Available from U.M.I., document no. 65-12,606
Xerox $4.20
Film reel $3.00

The purpose of this paper is to investigate the feasibility of using routinely collected demographic and other data for predicting length of hospitalization of patients admitted to state mental hospitals. The study material consists of 13,731 patients admitted to the state supported mental hospitals of Oklahoma.

The mathematical model employed is Bayes' Theorem. The use of the theorem makes is possible to calculate the conditional probability of a certain length of hospitalization that a patient may experience, given that he possesses certain characteristics.

It was possible to predict length of hospitalization with varying degrees of accuracy depending on the categories used to define the length of hospitalization. The best results, 86 per cent overall accuracy, occurred when the length of hospitalization categories were less than thirty days and thirty days or more. When four length of hospitalization categories, less than thirty days, thirty through fifty-nine days, sixty through eighty-nine days, and ninety days or more, were used the overall accuracy was 61 per cent, the poorest result obtained. A PILOT STUDY OF SELECTED VARIABLES CONCERNING ORTHOPEDIC SURGEONS AS THEY AFFECT INPATIENT UTILIZATION OF PHYSICAL THERAPY
Program in Hospital Administration, University of Minnesota, Minneapolis, Minnesota, 1967
Available from U.M.I. Xerox $3.35
Film reel #2.28 $5.50

Inpatient utilization of physical therapy department of Stormont-Vail Hospital, Topeka, Kansas, was studied for inpatients of seven orthopedic surgeons to determine correlation between number of visits to physical therapy and six selected characteristics of orthopedic surgeons.

Surgeons were ranked from highest to lowest for number of inpatient therapy visits. Each of the six variables studied was ranked similarly and Kendall Rank Correlation Coefficient Test was used to determine correlation, with significance set at .05. Study also determined if variables were independent of each other, using Kendall Partial Rank Correlation Coefficient. Data indicate significant positive correlation between number of visits and number of inpatient dismissals, number of inpatient days, and number of operations and procedures performed by orthopedic surgeons. These three variables were also found to be interrelated, with inpatient days perhaps making relationship of other two variables. (This is to say: use of physical therapy is related to use of the hospital for inpatient care.) A strong relationship was also shown between number of offices held in medical staff organization and opinions of surgeons about physical therapy departments. Further studies using other variables are recommended. (D.F.B.)

Film reel #2.28 $5.50

An analysis of the Surgery Storeroom activities of St. Joseph Mercy Hospital of Ann Arbor, Michigan to establish a program of inventory control in the surgical supply items. Recommendations which the authors feel will establish better communication and develop a less expensive purchasing procedure are given. (A.R.N.)

PU2019 72pp.ill.R., 12/67

Donnelly, W. A.; Dorsey, H. W.; Kuyawa, J.
PURCHASING DEPARTMENT ANALYSIS
Community Systems Foundation, 111 North Main, Ann Arbor, Michigan 48108, 1967
Available from U.M.I. Xerox $3.25
Film reel #2.28 $5.50

The report of Phase I of an analysis of the purchasing department of a private mental hospital near Baltimore, Maryland. Phase I includes a description of the present procedures of the department and establishes a Purchasing Department Manual. The manual treats "such areas as: department organization; department policies; procedures for issuing, ordering, receiving, inventorying and disposing of stores and nonstores items, invoice processing, property control and vendor relationship". Appendix contains specimens of forms used in purchasing department. (L.E.W.)

Ortega, Frank A.
AN EVALUATION OF REUSABLE AND DISPOSABLE GLOVES AT BROOKE GENERAL HOSPITAL AND VALLEY FORGE GENERAL HOSPITAL
Baylor University, San Antonio, Texas
Available on loan from Asa S. Bacon Memorial Library, American Hospital Association, 840 North Lake Shore Drive, Chicago, Illinois 60611, 1965

A study to determine if disposable gloves should be substituted for reusable gloves at the two military hospitals. The evaluation was based on a study of the following points:

if the disposable was as functional as the reusable; if the disposable was acceptable to the professional staff; if the disposable was safe; if it contributed to patient comfort and care. The cost of using disposable gloves at Brooke General Hospital was found to be higher than reusables; at Valley Forge General the opposite was found. On the basis of cost the recommendation was made for disposables at Valley Forge and against at Brooke. (L.E.W.)

PU3021 114pp.b.d.ill.th.M.H.A., 12/67

Quinlan, Richard S.
AN ORGANIZATIONAL AND STAFFING STUDY OF THE BINGHAMTON GENERAL HOSPITAL CENTRAL SUPPLY SERVICE
Graduate Program in Hospital Administration, Xavier University, Cincinnati, Ohio, 1966
Available from U.M.I. Xerox $5.15
Film reel #2.28 $5.50

Analysis of Central Supply Service of this 363 bed, short-term city hospital (Binghamton New York) includes review of internal organization, interorganizational relationships and their effect on services rendered, staffing, description and illustrations of functional areas, and procedures followed for inventory, bulk storage, and management of administrative tasks. Study found Central Supply was meeting only minimum requirements. Some of the major recommendations include: placing department head under administrative offices; revision of two-step pick-up and delivery system to a one-step system; elimination of bulk storage area and portion of sterile solution area to accommodate Oxygen-Therapy and orthopedic appliances; establishment of bin card system for inventory; and acquiring a ward assistant to assume routine administrative tasks which interrupt duties of technical personnel. (D.F.B.)

Gonzalez, P.; Jacobs, M. O.
STUDY OF CENTRAL SUPPLY ROOM LAYOUT
Community Systems Foundation, 111 North Main, Ann Arbor, Michigan 48108, 1967
Available from U.M.I. Xerox $3.00
Film reel #2.29 $5.25

Study made at Foote Memorial Hospital, Jackson, Michigan "to improve layout of Central Supply Room". Five alternative layouts were presented to administration which resulted in a sixth which the architect incorporated in expansion plans. The six alternative floor plans are shown with related statistics as to travel distance to user departments and frequency of delivery trips. (L.E.W.)

Manitoba Hospital Association
REPORT OF THE COMMITTEE ON THE FUTURE OF THE COUNSELLING SERVICES PROGRAM
Manitoba Hospital Association, 556 Academy Road, Winnipeg 9, Manitoba, Canada, 1967
Available from U.M.I. Xerox $3.00
Film reel #2.29 $5.25

Report showed the need for advice at top management level in Manitoba hospitals, and the need to utilize existing information resources within the hospital field both of which are objectives of the relatively new counselling service. The appendix gives statistics on cost and operation of the program, the time allotment of personnel, and tabulations on surveys completed. (L.E.W.)

SPECIALIZED CARE UNITS

SC0023 85pp.b.d.ill.th.M.A., 10/67

Davis, Gordon Morris
THE ORIGIN AND DEVELOPMENT OF THE BURN THERAPY UNIT AT THE MEDICAL COLLEGE OF VIRGINIA
School of Hospital Administration, The Medical College of Virginia, Richmond, Virginia 1965
Available on loan from the Asa S. Bacon Memorial Library, The American Hospital Association, 840 North Lake Shore Drive, Chicago, Illinois

A historical study of the Burn Therapy Unit at Medical College of Virginia made for the purpose of learning of the "complexities involved in establishing a burn unit, the scope of the unit, and its contributions toward improved patient care". The study was accomplished by interviews of burn unit personnel, review of published and unpublished material on the unit, and by correspondence with authorities in the field. (L.E.W.)

SC1040 6pp.b.d., 9/67

Lawrie, D.M.; Greenwood, T.W.; Goddard, M.; Harvey, A.C.; Donald, K.W.; Julian, D.G.; Oliver, M.F.
A CORONARY-CARE UNIT IN THE ROUTINE MANAGEMENT OF ACUTE MYOCARDIAL INFARCTION
The Lancet, Vol. II, No. 7507, July, 1967, pp. 109-114
Available from original publisher

Article describes experience of new coronary care unit (Royal Infirmary, Edinburgh) with first 400 cases of myocardial infarction admitted. The design, equipment and staffing of the unit are detailed. Also discussed are admission and discharge policies and problems of therapeutic policy, staffing and administration that present in this type of unit. Of the 400 cases, there were 70 deaths - 55 in the unit and 15 in wards after transfer. High proportion of deaths was due to shock, asystole and severe cardiac failure. It is concluded this type of unit can make maximum impact on mortality if admissions are restricted to patients whose symptoms began within preceding 48 hours and to those who develop serious arrhythmias while being treated elsewhere. (D.F.B)

SC1041 5pp.b.d.p., 1/68

Campbell, Donald; Reid, J. M.; Telfer, A. B. M.; Fitch, W.
FOUR YEARS OF RESPIRATORY INTENSIVE CARE
British Medical Journal, November, 1967, pp. 255-259
Available from original publisher

This paper gives data on a survey of patients at Glasgow Royal Infirmary (July, 1963 - January, 1964) to determine the percentage of beds needed for Intensive Care, and length of stay in the unit, distribution of patients by age group, and the mortality rate. Unit was restricted to patients in acute respiratory embarrassment. It was decided four per cent of the bed complement should be ICU; the three - five day length of stay was most common; the distribution by age group was quite wide; and "the mortality in patients thought to require intensive care was found to be 19 percent." (L.E.W.)

SOCIAL SERVICE

S00013 57pp.b.d.R., 11/67

Gordon, Barbara; Rehr, Helen
A STUDY OF AGING WARD PATIENTS SERVED BY THE MOUNT SINAI HOSPITAL SOCIAL SERVICE DEPARTMENT
Social Service Department, The Mount Sinai Hospital, 11 East 100th Street, New York, New York, 10029, 1966
Available from U.M.I. Xerox $3.00
Film reel #2.29 $5.25

A study was made of the 121 ward patients 60 years of age and older who completed social service contact at The Mount Sinai Hospital (New York City), January - May, 1965. Data were collected for descriptive demographic data, socioeconomic characteristics, referral patterns to social service, selected activities of social service, to draw comparisons between aged population served by social service and those served by major division of medicine, and to describe prior social living arrangements and "post-admission" discharge plans. Extensive tabulation of data given as well as examples of data collection forms. (L.E.W.)

S00014 133pp.th.D.S.W., 12/67

Krakow, Sylvia G.
A STUDY OF COLLABORATION BETWEEN THE SOCIAL WORKER AND THE DOCTOR IN THE TUMOR CLINIC AT BETH ISRAEL HOSPITAL
University of Pennsylvania, Philadelphia, Pennsylvania, 1966
Available from U.M.I., document no. 64-10,519
Xerox $6.40
Film reel $3.00

A study to describe the nature of collaboration ("joint thinking and planning . . . on the patients' behalf") between the social worker and physician in hospital. An investigator during a six-month period made observations, consulted records, conducted interviews, which were focused on twenty-five patients at five crucial points of time and decision in relation to their progress in Tumor Clinic.

The author found collaboration to be a secondary process called into operation "when social and psychological complications distort medical treatment and care". Initiation of most of collaboration was by the physician - coordinator of the clinic who carried "central and primary responsibility". Use of collaboration was made "in areas involving motivation for use of medical treatment and care, reality factors which impede action, and relationship problems occasioned by illness." (L.E.W.)

CHANGE OF AVAILABILITY

The Hospital Systems Research Group, Department of Industrial Engineering, The University of Michigan working under U.S.P.H.S. Grant Number HM00406-02 developed a number of methodology manuals for departments of hospitals. These manuals have been used in Methodology Workshops at the University and were made available also through the Publications Distribution Service of the University. Abstracts of several of the manuals were published in Abstracts of Hospital Management Studies during the past three years with the University service given as the place to purchase.

The U.S.P.H.S. grant has terminated and the principals of the group at work have now joined Community Systems Foundation, where the methodologies are now available. Below is a list of the abstracts of methodologies which have appeared in Abstracts of Hospital Management Studies and the address from which the manuals are now available.

ABSTRACT NUMBER	TITLE
AM0003	ADMITTING METHODOLOGY MANUAL
65	DIETARY METHODOLOGY MANUAL

SEMINARS ON STAFFING

The Center for Hospital Continuing Education, Bureau of Hospital Administration instituted Staffing Seminars in June of 1967. Continuing programs are planned for March and ensuing months of 1968.

Staffing methodologies for particular hospital departments form the basis for the Seminars. The University of Michigan Department of Industrial Engineering with the aid of many U.S. hospitals and the support of U.S.P.H.S. has developed detailed methodologies which can be used by administrators or department heads to calculate objective reliable estimates of how many employees they need. Methodologies are now complete for:

Admitting	Medical Records
Dietary	Pharmacy
Housekeeping	Radiology
Laundry	

The most significant use of this new approach is its use by hospital administrators, and as important, by department heads as a management tool for measuring and/or forecasting effective staffing. The manuals will permit the department head to determine correct staffing figures and to evaluate alternative operation conditions based upon his own specific:

- Workload
- Types of equipment, working tools and supplies used
- Scheduling policies
- Physical facilities, work-place layouts, and material handling
- Administrative and operating policy

Programs are presently planned as follows:

March 25-29, 1968 - Methodology Workshop, Ann Arbor
May 20-24, 1968 - Methodology Workshop, Ann Arbor

Announcing

the book length report of a three-year study of Progressive Patient Care in a community hospital

by

John R. Griffith
Associate Director and Associate Professor
Program and Bureau of Hospital Administration
The University of Michigan

Lewis E. Weeks, Ph.D.
Managing Editor, *Abstracts of Hospital Management Studies*
Bureau of Hospital Administration
The University of Michigan

James H. Sullivan
Administrator, McPherson Community Health Center, 1951-1967

Study conducted by members of the Bureau of Hospital Administration under W. K. Kellogg Foundation support.

$10.00

337 pages, 11 pages photographs, floor plans, bibliography, index, research methodologies, clothbound.

The authors tell what happened when a 75 bed community hospital decided to expand its capacity to 141 beds and embark on a full-scale PPC program including Intensive Care, Continuing Care (Rehab.), Outpatient Care, and hospital-based Home Care. Also, the management steps necessary to make the program a practical, economical way to meet community medical needs are shown.

Some of the questions covered were:

- How does a hospital plan for a major expansion?
- What are the critical elements of organizational policy and facility design?
- What do patients, employees, and physicians think of the system?
- What happens to nursing care under PPC?
- How is the hospital income affected by PPC?
- When does PPC save money, when does it cost money?

Books of the Bureau of Hospital Administration Research Series . . .

PROGRESSIVE PATIENT CARE

An Anthology
Edited by Lewis E. Weeks and John R. Griffith

A collection of salient articles on Progressive Patient Care. Some treat PPC as a balanced program, others consider individual units such as Intensive Care, Self Care, Long Term, and Home Care. Reports given on planning, implementation, and operation of PPC programs. Several writers discuss staffing, floor plans, patients' profiles, costs, and charges. A comprehensive bibliography adds to the value of this source book. 385 pp., illustrated, clothbound. **5.00**

REGIONALIZATION AND RURAL HEALTH CARE

Walter J. McNerney
Donald C. Riedel

A study of an actual, formal regionalization compact entered into by three health centers and two regional hospitals in northern Michigan. Data on utilization of the health facilities by residents of the areas before and after regionalization were collected and studied by the Bureau of Hospital Administration, The University of Michigan, under a W. K. Kellogg Foundation grant. Attitudes toward regionalization gleaned from interviews. Bibliography included. 209 pp., 83 tables and figures, clothbound. **5.00**

PATTERNS OF PATIENT CARE

Donald C. Riedel
Thomas B. Fitzpatrick

An extended analysis of data from a University of Michigan study on character and effectiveness of hospital use as measured by criteria set by a panel of medical specialists. Eighteen diagnostic categories used in consideration of appropriateness of admission, length of stay, and use of hospital services. Medical and financial records of probability sample of discharged patients of Michigan hospitals used to compare actual care to criteria of appropriate use. Appendix contains tabulation of data and description of methodology. 292 pp., 169 tables and figures, clothbound. **7.50**

Inventory of Manpower Research Projects in Indiana, Number 3.

Indiana Manpower Research Association, Lafayette
MF AVAILABLE IN VT-ERIC SET.
Pub Date - May68 17p.

*MANPOWER DEVELOPMENT; *ANNOTATED BIBLIOGRAPHIES; VOCATIONAL EDUCATION; *MANPOWER UTILIZATION; LABOR ECONOMICS; *RESEARCH PROJECTS; MANPOWER NEEDS
INDIANA

This inventory of research consists of two parts: Part I includes 38 research projects, Part II lists 23 papers, articles and other items of interest. This year the listing was compiled from postcards returned by researchers. Only the title of the project was requested and therefore brief statements or annotations do not appear for all the projects. Projects newly reported are indicated by asterisks. The report contains a form which can be used to furnish information about manpower research projects which will then be included in the next inventory. Two earlier inventories are available as VT 003 780 (ARM Summer 1969) and VT 003 781 (ARM Winter 1968). (CH)

THE FOURTH INDIANA MANPOWER RESEARCH CONFERENCE

WILL BE HELD AT INDIANAPOLIS IN MID - NOVEMBER

MORE INFORMATION WILL BE AVAILABLE AT A LATER DATE.

INVENTORY OF MANPOWER RESEARCH PROJECTS IN INDIANA

This is the third inventory compiled by the Indiana Manpower Research Association. At the first conference held in Indianapolis on December 7 -8, 1965, the conferees agreed that it would be mutually beneficial to continue efforts to advance manpower research, create a repository of related studies and data, coordinate activities, and establish liaison among researchers and users. The Association was formally organized at the Second Conference held at Purdue University on November 15 - 16, 1966.

By means of its inventories, proceedings, and other activities, the Association disseminates information about completed, on-going, and planned manpower research, as well as information about needs. Through these efforts, research gaps can be indicated and duplication lessened.

This listing was compiled from the postcards returned by researchers. Only the title of the project was requested this time, and therefore, brief statements do not appear for all of the projects. Projects newly reported are indicated by asterisks. The form on the next page can be used to furnish additional information about projects, which will then be included in the next Inventory.

Part I includes research projects while Part II lists papers, articles and other items of interest.

A list of suggested topics for manpower research compiled by the Coordinating Board is available upon request.

Inquiries and requests for additional copies of the Inventory may be directed to Research and Statistics, Indiana Employment Security Division, 10 North Senate Avenue, Indianapolis, Indiana 46204.

A COMPARISON OF THE EDUCATIONAL DEVELOPMENT OF DIVERSIFIED COOPERATIVE EDUCATION STUDENTS AND NON-DIVERSIFIED COOPERATIVE EDUCATION STUDENTS IN SELECTED INDIANA HIGH SCHOOLS
(Ph.D. Thesis, Purdue Univ., Completed)

Objective: To ascertain whether high school cooperative education programs adversely affect the educational development of participants when compared with their counterparts who obtain all their instruction within the formal school.

Procedure: Test-retest design with the Iowa Tests of Educational Development (ITED) which provides ten measures in nine areas, including a composite measure of tests one through eight. Subjects were equated, within predetermined limits, with respect to sex, chronological age, attendance, initial ITED composite score, grade, and school. Single factor covariance analysis was used to test differences. Initial scores were used as independent variables and post-test scores as dependent variables.

INDIANA HIGHER EDUCATION NEEDS AND RESOURCES
(In progress)

With a grant from HEW, and sponsored by the Indiana Commission on Academic Facilities and the Indiana Conference on Higher Education (consisting of presidents of all public and private colleges in the state) a two year study will be conducted to determine post-high school educational needs over a fifteen year period. Starting projects include a survey of existing facilities and programs offered.

A COMPARATIVE STUDY OF LABOR MARKET ADAPTATION TO TECHNOLOGICAL CHANGE IN BRITISH AND AMERICAN COAL MINES
(In progress)

The investigators propose to make a critical analysis of the labor market adaptations to technological change in an industry that has been basic for the economies of the two countries. This will include study and appraisal of:

a. Changes in total labor utilization and the portion of this attributable to technological change.

b. Changes in labor force structure within the industry.

c. The relation of these changes to such variables as geographic distribution of production, production in different types of mines, productivity of labor in the industry, extent of total or partial unemployment, and regional economic development of the areas involved.

d. The role of training and retraining programs in labor force adjustments.

e. Possible future manpower developments in this industry.

INTERNATIONAL SURVEY OF EDUCATIONAL DEVELOPMENT AND PLANNING
(Two or more books in 1968 or 1969. Interim results: Pakistan's High Level Manpower and Human Resource Development Planning. U.S. Agency for International Development: Pakistan Mission. February, 1965. Mimeo. Comments on the Education Commission Activities and Review of the Design of India's National Education Plan. Government of India: Education Commission. September, 1965. Mimeo.)

World survey of the relationship between educational development and national economic and political development with particular emphasis on the economics of education and planning. Special attention will be given to the role of scientific-technical personnel, professional manpower and professional higher education in economic development. The research objective is the study of criteria for setting educational and manpower planning goals. Methods will include review of available plans, documents and interviews with officials responsible for preparation of such plans. The research is being sponsored by the Carnegie Corporation, Indiana University and Ford Foundation and in cooperation with international organizations (OECD and UNESCO).

A STUDY OF THE NEED FOR EDUCATIONAL AND TRAINING ADJUSTMENTS IN APPRENTICESHIP PROGRAMS FOR SELECTED CRAFT OCCUPATIONS
(Report to U.S. Dept. of Labor, OMPER, September 1968. Conference paper is included in the 1967 Proceedings of the Indiana Manpower Research Conference)

The goals for this national project include attempts:

1. To develop procedures, or guidelines--perhaps, a pattern or framework--for an optimum apprenticeship training system(s);

2. To compare contemporary training systems with the optimum; and

3. To generate suggestions, if needed, for the improvement of on-going programs.

The interdisciplinary team, composed of research scientists from Industrial Engineering, Sociology, Industrial Education, Labor Relations and Economics, and Industrial Psychology, will analyze data obtained from individuals and organizations involved in the apprenticeship system by a variety of survey instruments. To determine a pattern for an optimum apprenticeship training system, consideration will be given to:

1. The basic criteria of accrediting agencies.

2. The factors basic to the development of superior workers who adapt to technological and other changes.

3. The discriminators between superior and other types of training programs.

4. The kinds of analyses and feedback systems which must be identified and used to keep workers in a state of operational readiness.

HEALTH MANPOWER REQUIREMENTS AND RESOURCES IN METROPOLITAN INDIANAPOLIS 1966 - 1971
(Booklet, October 1967. Conference paper is included in the 1967 Proceedings of the Indiana Manpower Research Conference)

This study provides health manpower data on the health care agencies and educational institutions of the metropolitan Indianapolis area. It presents number of employees in full-time equivalents, current additional needs, and estimated additional needs and replacement needs through 1971. The results indicate that Indianapolis will experience a substantial manpower shortage of dietitians, medical technologists, medical records librarians, registered nurses, nurse aides, occupational therapists, physical therapists and social workers. It would seem that the demand for certified laboratory assistants, licensed practical nurses, and radiologic technicians will be essentially satisfied.

Zoned Analysis Techniques in Planning and Curriculum Development. Information Bulletin.

Delaware Occupational Research and Coordinating Unit, Dover
MF AVAILABLE IN VT-ERIC SET.
Pub Date - 10p.

CHARTS; *SYSTEMS APPROACH; *PROGRAM PLANNING; CONTENT ANALYSIS; *FACTOR ANALYSIS; *CURRICULUM PLANNING; *FACTOR STRUCTURE; METHODOLOGY
*ZONED ANALYSIS

Zoned analysis is a method of graphic delineation through which factors involved in any organizational or research project may be arranged in an orderly sequence on an easy-to-understand chart. The analysis proceeds from the general to the specific according to a predetermined and definite plan. The completed chart functions as a master plan which shows the relationship of each part to the whole. The zoned analysis chart, a series of circles (zones) around a central core, has a variable number of zones according to the project being analyzed. The core must bear a clear-cut title which will restrict the scope of the investigation. The first zone beyond the core is divided into "What It Is," and "How It Is Used." Each of these is divided in the second zone; division may continue indefinitely, resulting in more precise definition of detail with the progression from one zone to another. Details are outlined for the use of zoned analysis as a conference tool, an outline, and a visual aid. Charts are included which describe and illustrate various ways the zoned analysis technique may be used in educational planning. (FP)

"ZONED ANALYSIS TECHNIQUES IN PLANNING AND CURRICULUM DEVELOPMENT"

I. WHAT IS "ZONED ANALYSIS"?

A. METHOD OF GRAPHIC DELINEATION

1. Explanation: Zoned analysis is a method of graphic delineation which may be explained as a system through which factors involved in any organizational or research project may be arranged in orderly sequence on an easy-to-understand chart. The analysis proceeds from the general to the specific according to a predetermined and definite plan.

2. Function: When the chart has been completed, it functions as a master plan which shows the relationship of each part to the whole. Because the factors are arranged logically, constructive action is a natural result. While the chart is not an unalterable document, and changes will be found necessary as an investigation proceeds, they will be minor - more in the nature of additional detail rather than of structural alteration.

B. PLAN FOR DEVELOPMENT

1. Form of the Chart: The zoned analysis chart is in the form of a series of circles described around a central core, thus establishing the boundaries for a series of zones. The number of zones will vary with the project to be analyzed. These zones may be given significant titles if desired. Such titles are not particularly important or necessary where one person is making an analysis for his own use. However, when a number of persons are to take part in a study, the naming of the zones is important.

2. Definition of Terms Used: Experience has proved that words may be interpreted differently by the persons reading them. For example, the word "unit" has significant meaning only if one defines its use in a specific case. In any analysis, outline, or research, the objective must be delimited. In Zoned Analysis, it is also important that the core be given a clear-cut title which will restrict the scope of the investigation. The words used to delimit the title may have differing connotations and it is, therefore, necessary to make a concise explanation of what is meant. For the same reason, it is desirable to limit the meaning of titles assigned to zones, and to define them by clear-cut statements.

VT007469

U.S. DEPARTMENT OF HEALTH, EDUCATION & WELFARE
OFFICE OF EDUCATION
THIS DOCUMENT HAS BEEN REPRODUCED EXACTLY AS RECEIVED FROM THE PERSON OR ORGANIZATION ORIGINATING IT. POINTS OF VIEW OR OPINIONS STATED DO NOT NECESSARILY REPRESENT OFFICIAL OFFICE OF EDUCATION POSITION OR POLICY.

3. Partition of Zones: The accompanying chart shows how the zones are partitioned. The first zone beyond the core, "Zoned Analysis," is divided into two parts entitled, "What It Is" and "How It Is Used." Each of these is divided in the second zone; in the third zone a further division takes place. The principle involved is that as an investigation proceeds from zone to zone, each new item must break down into two or more parts. This process of division may continue indefinitely; it results in more and more detail with the progression from one zone to another. The number of zones will, therefore, depend upon the objective. All factors included in a single zone must be parallel. This does not mean that they must necessarily be equal to each other in all respects; the extent of their parallelism is distinctly influenced again by the objective of the analysis. It will be easier to check for parallelism if the same parts of speech and grammatical construction are used to identify the factors in a given zone.

. HOW IS ZONED ANALYSIS USED?

A. AS A CONFERENCE TOOL

A conference is a meeting or series of meetings called to consider specific problems. The participants are usually experienced and thus qualify to represent points of view related to the subject. "Zoned Analysis" may be used effectively to analyze the problem, to arrange the facts in an orderly sequence and to present an over-all picture which may be used in drawing conclusions.

1. Preparation: Before the conference begins, the leader should define the subject to be considered and give it a clear-cut title. This is the core. He may then classify zones, bearing in mind that these classifications should provide for more and more detail as they move away from the core. Materials needed , such as books, other analyses, related information, and the like should be assembled. If a blackboard is to be used, he should have chalk, a large blackboard compass, an eraser, and a straight edge. Or, each conferee should be provided with a pre-printed sheet on which circles are already described, the core named, and zones identified.

2. Presentation: The conference leader should define the "Zoned Analysis" system. He should read his definition of the core topic and secure a common understanding of the topic to be considered and charted.

3. Delineation: The leader should present a classification of the zones together with an explanation to show how detailed the analysis will become as progress is made from one zone to another. When the conferees understand the meaning of titles assigned to the zones, it is safe to proceed with the actual breakdown. Each part of the first zone breaks into two or more parts in the second zone. The same progression continues from zone to zone.

4. Summation: If the suggestions made above have been followed, it will be possible to read any section of the chart from the core out, in a straight line, in any direction. For example, referring to the "Zoned Analysis" chart, we read

> "Zoned Analysis is a method of graphic delineation which may be explained as a system by which factors are arranged in an orderly manner."

or

> "Zoned Analysis is used as a conference tool; in preparing for a conference, the leader should define the subject to be considered."

As the chart is read, corrections may be made. When all this has been done, the conferees will have a clear-cut, detailed analysis. They are then ready to take action. If no definite action seems appropriate, this same Zoned Analysis system may be followed in analyzing the various possible actions. The core might be in the form of a question. The first zone might state possible actions, the second one advantages and disadvantages of different actions, and the third might be details involved. In any case, the whole picture would be before the group in a visual form. Psychologically, it is a good form because the eye is drawn toward and held by circular shapes.

B. AS AN OUTLINE

The same factors are involved in using Zoned Analysis for the development of an outline. It makes no difference what the purpose of the outline might be - a theme, a research paper, or an organization plan - the system is a visual aid which can be used effectively. The factors involved include delimitation of the objective and a definition; identification of the zones and definition of what they mean; and a check to make sure that the progression will result in an increasing number of details. Elaboration will include details which must be parallel within each zone; and finally, in summarizing, it must be possible to read the chart and check if for accuracy.

NOTES:

THE ZONED ANALYSIS CHART IS A VISUAL AID:

The chart attached is the outline which has been followed in preparing this informational bulletin. The breakdown of separate "Zones" includes:

The Core: "Zoned Analysis"
Zone #1 : Major Ideas To Be Considered
Zone #2 : Primary Breakdown of Ideas
Zone #3 : Subjects for Discussion
Zone #4 : Details Regarding Subjects

Attached also is a blank "Zoned Analysis Chart". Try this analysis technique on a special problem you are working on!

Profiles of Trade and Technical Teachers: Revised Summary Report 1968.

California, Univ., Los Angeles. Div. of Vocational Education
California State Dept. of Education, Sacramento. Bureau of Industrial Education
MF AVAILABLE IN VT-ERIC SET.
Pub Date - 68 38p.

*TRADE AND INDUSTRIAL EDUCATION; *TECHNICAL EDUCATION; TEACHER ATTITUDES; *TEACHER CHARACTERISTICS; TEACHER EDUCATION; *TEACHER BACKGROUND; TEACHER ROLE; TEACHER DISTRIBUTION; TEACHER EXPERIENCE; TEACHER SALARIES; PROFILE EVALUATION; STATE SURVEYS
CALIFORNIA

A Basic Description Questionnaire from 2,238 teachers was used to describe the teacher population, and make comparisons with previous studies. Fourteen group interviews, which included a self-perception questionnaire, were conducted throughout the state with a total teacher attendance of 185 and resulting data was used to make a prescription-description questionnaire, dealing with changing environment and colleague relationships, which was completed and returned by 408 teachers. Discussed are: (1) Three major types of institutional employment, (2) Characteristics of the trade and technical teacher's career in education, (3) Perceptions of the teachers about their careers, (4) An educational profile of the teachers which compares the educational factor with other factors and reports a striking rise in the educational level, (5) Patterns of affiliation and factors associated with memberships, (6) Relationships of teachers to their several environments, and (7) Teachers' perceptions about what is most helpful in both pre-service and in-service training. A major finding of the study was the respondents' desire for in-service training. Some of the areas of specific information about teachers include personal statistics, educational background and credentials, earnings, and distribution by county. (MM)

FOREWORD

The information assembled in this report provides a descriptive profile of the trade and technical teacher in California. It also explores many facets of his teaching and training. The perceptions and attitudes of teachers presented here are of particular value.

This research has been needed for a long time by the Bureau of Industrial Education, teacher training institutions, county boards of education and local school districts. It is needed for policy development and decision-making. It helps us know how teachers think and feel about key issues and how we can work to enhance the status of trade and technical teachers. It provides the facts which document the advances we have made in our profession.

These data will be used wherever appropriate in California and throughout the nation to further the cause of trade and technical education. They help answer many questions which are being raised today and provide direction for meeting the needs of tomorrow.

I am grateful to all of the teachers and administrators who have given their assistance to this research project.

Richard S. Nelson

What Characterizes Their Organizational Affiliations?	34
What Is The County Distribution of Teachers?	35

THE PROFILES STUDY

The past few decades have seen major scientific and technological revolutions. The need for skilled technicians and craftsmen has exerted pressure upon our educational institutions to meet the demand for a trained labor force. Grant Venn states that situation in these terms.

> Technological change has, rather suddenly, thrown up a dramatic challenge to this nation's political, economic, social, and educational institutions. Though the full scope of this challenge may not be comprehended for years to come, its dimensions are now clear enough to call for a massive response on the part of American Education. All levels of education, and particularly post-secondary education, must quickly move to assume greater responsibilities for preparing men and women for entry into the changed and changing world of technological work. Unless far more and far better education on the semiprofessional, technical, and skilled levels is soon made available to greater numbers of citizens, the national economy and social structure will suffer irreparable damage. [1]

Vocational teachers are the major factor in the acquisition of "far more and far better education on the semiprofessional, technical, and skilled levels." They are the key to any adequate program for the future. But even though we have amassed enough sophisticated knowledge to carry us through space and conquer the heavens, we still do not have the elementary information about the trade and technical teachers who play a vital role in the development of trained manpower.

---

[1] Grant Venn, Man, Education and Work (Washington, D. C.: American Council on Education, 1964), p. 1.

The descriptive information summarized in this greatly abbreviated report is only a small part of the Comprehensive Report.[2] But even the Comprehensive Report fills only a small part of the vacuum of needed information about these important teachers. We are hopeful that others will be inspired to go beyond the limitations of current research and focus on the numerous remaining needs and problems of this unique group of teachers.

Previous Studies

During the past two decades three studies have made spot inventories of the status of trade and technical teachers in California. Two of the status studies, jointly conducted by Melvin L. Barlow and Gail E. Moore, covered the period 1945-1950.[3] A third study, by David Allen, covered the period 1955-1962.[4]

Research Methods

The Profiles Study is more comprehensive than any other study of the subject known to the authors. The following is a description of the study.

---

[2] Melvin L. Barlow and Bruce Reinhart, Profiles of Trade and Technical Teachers: Comprehensive Report (Los Angeles: Division of Vocational Education, University of California, 1968).

[3] Melvin L. Barlow and Gail E. Moore, A Study of Teachers Entering Trade and Industrial Education (Los Angeles: Division of Vocational Education, University of California, 1953).

Melvin L. Barlow and Gail E. Moore, A Survey of Trade and Industrial Teachers (Los Angeles: Division of Vocational Education, University of California, 1955).

[4] David Allen, A Study of Trade and Technical Teachers Who Received First Credentials July 1955-June 1962 (Los Angeles: Division of Vocational Education, University of California, 1963).

Identification of the population. An up-to-date list of full-time trade and technical teachers in California was not in existence at the time this research began. For this reason the identification of the population was a task of immense importance. During 1966-67 approximately 4,000 teachers were examined for inclusion in the study, but many of these did not meet the criteria for inclusion. A search for trade and technical teachers took the researchers to the files of the teacher training offices of the University of California, to the regional offices of the State Department of Education, to selected county offices and to approximately fifty schools and school districts. Junior college catalogues and the California School Directory were also searched for the names of trade and technical teachers.

The population of the study was limited to trade and technical teachers with full-time credentials who were not engaged primarily in supervision or administration. The full-time credentials which met the criteria of the study were (1) the Standard Designated Subjects, Full-time, (2) the Special Secondary Vocational - Class A and (3) the Special Secondary Vocational - Class B. Full-time teachers with additional responsibilities in supervision, administration or other school employment were considered within the parameters of the population. Teachers who held a full-time credential but worked only part-time also were included in the population.

Basic Description Questionnaire. The Basic Description Questionnaire (BDQ) was initially sent to approximately 2,500 teachers. When the processing of the questionnaires began, 1,893 returns had been

received. Three hundred and six of these returns failed to meet the parameters of the study and were excluded from the survey population. The data reported from the BDQ in the original Summary Report are based on 1,587 returns. We estimate that these data represent at least 75 percent of the teachers known to be within the population when the questionnaire was administered.

During 1967-68 1,100 additional teachers were considered for inclusion in the study (some of whom did not respond to the earlier inquiries). After further examination 1,087 teachers thought to be within the population were sent BDQ's. One hundred and forty-six of the 797 returns did not meet the parameters of the study and were not retained. Therefore, 651 teachers in the 1967-68 restudy were added to the 1,587 in the original study to comprise the data on 2,238 teachers in the Revised Summary Report.

The purpose of the BDQ is to collect descriptive information about the characteristics of trade and technical teachers. These data were utilized to describe the teacher population, to make comparisons with previous studies and to explore the relationships of numerous variables.

Group interviews. Fourteen group interviews were conducted in eleven counties geographically distributed throughout the state. Three hundred and ten teachers from these counties were selected randomly to attend the interviews. One hundred and eighty-five teachers attended these sessions. The interviews attempted to identify teacher perceptions and suggestions related to the following four areas:

1. The changing environment of trade and technical education

2. The relationships of trade and technical teachers with their colleagues (academic and vocational)

3. The pre-service training of teachers

4. The in-service training of teachers

Data from the group interviews became the basis of the Prescription-Description Questionnaire described below.

Self-Perception Questionnaire. The Self-Perception Questionnaire (SPQ) was administered to the "captive" participants in the group interviews described above. The purpose of the SPQ was to obtain responses from teachers on a comprehensive range of teaching activities.

Prescription-Description Questionnaire. The Prescription-Description Questionnaire (PDQ) was designed to follow up the series of group interviews. The items incorporated in this questionnaire were selected from typescripts and other notes made from the interviews.

Two forms (Form A and Form B) of the PDQ were utilized so that prescriptive and descriptive data could be collected from the first two sections of the instrument (changing environment and relationships with colleagues). The prescriptive Form A asked how frequently the suggested items should be practiced. The descriptive Form B asked how frequently the suggested items are practiced. In the third and fourth sections (pre-service and in-service) only the prescriptive data were required.

A random sample of 510 teachers was drawn from the 1,587 respondents to the BDQ. The sample also was representative of the

types of institutions (high school, junior college and correctional). Half of the teachers (255) received Form A and half received Form B.

The data reported below are based on an 80 percent return (408 responses). The samples were kept representative by type of institutions.

Research Schedule

The original proposal provided for individual interviews following the group interviews, but this plan was abandoned and a questionnaire was substituted for the individual interview. The size of the total study population originally was estimated at about 1,000 teachers. Because the population proved to be considerably larger, the required clerical work and data processing time were grossly underestimated. The original schedule was adjusted for this reason. The revised schedule follows:

July 1 -- September 30, 1966

1. Prepare list of trade and technical teachers.
2. Prepare Basic Description Questionnaire.
3. Schedule group interviews and select participants.
4. Prepare Self-Perception Questionnaire.

October 1, 1966 -- January 30, 1967

1. Administer Basic Description Questionnaire.
2. Conduct group interviews.
3. Administer Self-Perception Questionnaire.
4. Process data from Basic Description Questionnaire and Self-Perception Questionnaire.
5. Develop Prescription-Description Questionnaire and conduct random sampling.

February 1 -- April 15, 1967

1. Continue data analysis of all three questionnaires.
2. Present available data to Advisory Committee.

April 16 -- June 30, 1967

1. Complete data analysis.
2. Develop descriptions and interpretations.
3. Prepare reports for publication.

July 1 -- September 30, 1967

No work on teacher Profiles Study.

October 1 -- December 31, 1967

1. Update list of trade and technical teachers.

January 1 -- April 30, 1968

1. Administer Basic Description Questionnaire to additional teachers.

May 1 -- June 30, 1968

1. Process data from Basic Description Questionnaire.
2. Prepare Revised Summary Report.

Description of Comprehensive Report

The content of the Comprehensive Report of the Profiles Study is divided into seven chapters. Three major types of institutional employment are reported in Chapter I and related to many other factors. The type of institutional employment is one of the most discriminating factors in the study. Chapter II describes the characteristics of the trade and technical teacher's career in education and the perceptions of the teachers about them. It also includes data on teachers prior to teaching. Chapter III provides an educational profile of the current population of teachers, compares the educational factor with other factors and reports a striking rise in the educational level. Analysis

of memberships reported reveals that trade and technical teachers have a median of 5.6 organizational affiliations per teacher. Chapter IV describes the patterns of affiliation and the factors associated with memberships. The relationship of the teachers to their several environments is described in Chapter V. Teacher perceptions about what is most helpful in both pre-service and in-service training are reported in Chapter VI. A major finding of the study has been the respondents' desire for in-service training. A summary of the study, in Chapter VII, with interpretations and an appraisal of future developments, concludes the report.

Advisory Committee

This research is indebted to its advisory committee. The interpretation, evaluation and use of the information gathered in the course of the research have been enhanced by their guidance and cooperation.

The following persons served on this committee:

Dr. David Allen
Coordinator
Trade and Technical Teacher Education
University of California, Los Angeles

Mr. Everett W. Coles
Instructor of Print Shop
Garfield High School
Los Angeles

Mr. Donald C. DePuy
Instructor of Electronic Math
Fullerton Junior College
Fullerton

Dr. John W. Dunn
District Superintendent
Peralta Junior College District
Oakland

Mrs. Grace M. Edwards

SUMMARY DATA

WHAT DO TEACHERS TEACH?

Major Subject Areas	Percent of Overall Population[5]
Practical nursing	14.7
Automotive	11.0
Electrical-electronics	9.9
Drafting	6.6
Machine shop	5.8
Cosmetology	4.2
Printing	3.6
Peace officer	3.5
Carpentry	3.4
Welding	3.3
Dental	3.1
Medical	3.0
Foods	2.9
Aircraft	2.8
Sewing	2.1
Photography	1.2
Architectural landscaping	1.1
Radio-television	1.1
Sheet metal	1.1
Air conditioning, heating and refrigeration	1.0

[5] All percentages in succeeding tables are assumed to be percentages of overall population unless otherwise stated.

HOW OLD ARE TRADE AND TECHNICAL TEACHERS?

* The median age is 45.5 years

* The median age is 36.7 years

WHAT IS THE SEX AND MARITAL STATUS OF TEACHERS?

WHERE DO THE TEACHERS TEACH?

HOW MANY CREDENTIALS DO TEACHERS HOLD CLEAR?

WHAT DO TEACHERS WITH FULL-TIME CREDENTIALS DO?

Part-time teacher with:

(a) no other employment	2.3%
(b) supervision and/or administration responsibilities	2.6%
(c) other school employment	1.3%
(d) other non-school employment	3.1%
	9.3%

Full-time teacher with:

(a) no other employment	50.8%
(b) additional supervision and/or administration responsibilities	14.9%
(c) other school employment	12.2%
(d) other non-school employment	10.2%
	88.1%

HOW MUCH FORMAL EDUCATION DO TEACHERS HAVE?

Current Education

Education Prior to Teaching

DO NEW TEACHERS HAVE MORE EDUCATION?

Studies of "Recent Entrants" at the Start of Teaching

	1967[6]
High school diploma	15.9%
Junior college courses	18.8%
Junior college degree	9.4%
Registered nurse	6.4%
Non-extension college courses	14.2%
Bachelor degree	29.3%
Master degree	4.9%
Doctor degree	1.2%

	1962[7]
High school diploma	38.7%
Junior college courses	6.4%
Junior college degree	7.5%
Registered nurse	5.7%
Non-extension college courses	9.0%
Bachelor degree	24.2%
Master degree	8.1%
Doctor degree	.4%

	1953[8]
High school diploma	59.9%
Non-extension college courses	19.9%
Bachelor degree	16.1%
Master degree	4.8%
Doctor degree	.2%

---

[6] The number of recent entrants from the 1967 survey is only a sample of the total population of new teachers since 1962.

[7] David Allen, A Study of Trade and Technical Teachers Who Received First Credentials July 1955-June 1962 (Los Angeles: Division of Vocational Education, University of California, 1963).

[8] Melvin L. Barlow and Gail E. Moore, A Study of Teachers Entering Trade and Industrial Education (Los Angeles: Division of Vocational Education, University of California, 1953).

DO TEACHERS WORK FOR DEGREES WHILE TEACHING?

DO TEACHERS PLAN MORE EDUCATION?

Current Enrollment

Anticipated Enrollment

HOW MUCH WORK EXPERIENCE DO TEACHERS HAVE?

Years of Work Experience Prior to Teaching

* The overall median is 13.5 years.

HOW MUCH TEACHING EXPERIENCE DO TEACHERS HAVE?

* The overall median is 5.4 years.

WHAT IS UNIQUE ABOUT TRADE AND TECHNICAL TEACHER CAREERS?

They are older than most other groups of teachers (median of 45.9 years) and they are older when they begin to teach (median of 36.8 years).

They have a median of 13.9 years of work experience prior to teaching.

Two-thirds teach in fourteen vocational subject areas and ninety per cent are teaching full-time.

Large numbers of recent entrants contribute to the smallness of the median (6.7 years) of teaching experience for the group. Forty per cent have taught less than five years and two-thirds have taught less than ten years.

ARE THERE ANY INSTITUTIONAL DIFFERENCES?

Correctional Teachers Have More Work Experience

	Median Number of Years
High school teachers	14.74
Junior college teachers	12.66
Correctional teachers	18.07
Other teachers	14.88

Public School Teachers Have More Formal Education

	Percent of Public School Teachers	Percent of Correctional Teachers
High school diploma	3.82	11.37
Junior college courses	10.70	31.28
Junior college degree	5.32	7.58
Registered nurse	7.85	---
Non-extension college courses	22.10	36.49
Bachelor degree	29.73	4.11
Master degree	16.77	2.84
Doctor degree	.97	---

HOW MUCH DO PUBLIC SCHOOL TEACHERS EARN?

WHAT IS APPRECIATED MOST IN PRE-SERVICE PREPARATION?

Demonstrations by master teachers

Practice in actual instruction

Emphasis on methods and techniques related to subject areas

Help in lesson planning

Help in curriculum development

WHAT DO TEACHERS SUGGEST FOR IN-SERVICE TRAINING?

Workshops and seminars for specific subject areas should be provided.

Latest information in the trade and technical fields should be disseminated.

Industrial organizations and institutions of higher education should sponsor in-service training.

Master teachers should be employed for in-service instruction.

Training for vocational counseling should be provided for teachers and counselors.

Central responsibility, direction, coordination and communication for in-service training should be established.

Sound methods of instruction should be taught and demonstrated.

Credit should be provided on the salary schedules of school districts for in-service training.

HOW DO TEACHERS PERCEIVE A GOOD SCHOOL ENVIRONMENT?

Philosophy of administration that supports vocational education

Equal status with academic teachers

Professional advancement related to trade and technical competence

Adequate vocational counseling for all students

Competent students

Vocational orientation for all students

Students who complete their training for a job

Adequate space

DO TEACHERS JOIN ORGANIZATIONS?

WHAT ORGANIZATIONS DO TEACHERS JOIN?

Membership in National Organizations

Membership in State Organizations

WHAT ORGANIZATIONS DO TEACHERS JOIN?

WHAT CHARACTERIZES THEIR ORGANIZATIONAL AFFILIATIONS?

Memberships in organizations are also found to increase with age, salary and additional credentials.

Higher percentages of "joiners" have academic degrees, assume more additional school-related responsibilities, are employed by junior colleges and teach in large towns and cities.[9]

The percentage of memberships in general teacher organizations is larger than the percentage in vocational teacher organizations.

Higher percentages of "non-joiners" are employed by correctional institutions and have Catholic religious affiliations. Lower percentages have academic degrees, teach in large towns and have Protestant religious affiliations.[9]

Memberships are predominantly related to the teaching profession.

---

[9]The "joiners" are teachers who are members of ten or more organizations. The "non-joiners" are teachers who are not members of any organization.

WHAT IS THE COUNTY DISTRIBUTION OF TEACHERS?

REPUBLIC OF CHINA

In November 1966, when the National Vocational Training Commission was established, its responsibilities consisted mainly of establishing and promoting a national vocational training system. To do this it was necessary to conduct a survey of current practices and to compile a catalog of training programs. Data were collected from the Department of Reconstruction, the Performance Inspection Report of Labor Education in 1966, and the Training Survey Report of the National Youth Commission. This Chinese-English version reports, in tabular form, all kinds of skill training programs as of 1966 under these headings: (1) Number of Vocational Training Classes and Trainees by Categories of Sponsoring Establishments and Industries, (2) Vocational Training sponsored by Public and Private Enterprises, Government Agencies, Schools and Colleges, and (3) Private Business Organizations. A total of 160 enterprises offering 1,691 classes to 53,732 trainees were covered by the survey. The appendix gives information such as type of personnel organization, number of staff and trainees, course offerings, and types of facilities for 15 training programs. (EM)

NATIONAL VOCATIONAL TRAINING COMMISSION

前　　言

我國自民國四十二年開始賡續實施四年經濟建設計劃以來，工業發展極爲迅速，因而技術人力逐年益感缺乏。政府於五十五年公佈人力發展計劃，期使我國人力之發展得與經濟建設齊頭並進。同年冬中央職業訓練委員會成立，其職責在建立全國職業訓練體制，並促進職業訓練工作之推行；但在從事工作之初，對於目前臺灣已有職業訓練現狀須先瞭解，故出版職業訓練統計，實有必要。

由於財力及人力之限制，本統計大部份係採間接調查，資料來源除部分直接來自受查單位外，多根據：

一、臺灣省建設廳調查資料。

二、中央委員會第五組五十五年度勞工教育實施績效考查報告。

三、行政院青年輔導委員會訓練調查報告。

而本統計之對象以獲得專業技術之各類職業訓練爲主。

爲求今後職業訓練之調查統計更爲翔實起見，無論名稱或數字如有錯誤或遺漏均請通知本會以便改正。

FOREWORD

Since the implementation of the four Four-Year plans for Economic Development, the industrial growth has been so rapid that has created the immense problem of shortages of skilled manpower. In 1966 the government promulgated the Manpower Development Plan designed to promote skill development to the levels demanded by the industrial and economic growth. In November 1966 the National Vocational Training Commission was established. Its responsibilities consisted mainly of establishing a national vocational training system and of promoting various training programmes.

In order to discharge its responsibilities it became necessary to carry out a vocational training survey of current practices and to compile a catalogue of training programmes in this country.

The survey was limited by available resources and reliance was placed on statistics from following indirect sources: (1) The survey materials of Dept. of Reconstruction, Taiwan Provincial Government; (2) Performance Inspection Report of Labour Education in 1966 by 5th Division, Central Committee of Kuomingtong; (3) Training Survey Report of the National Youth Commission of Executive Yuan.

The scope of the survey covers any kind of training that can endow one with skills.

This is a first attempt to collect this kind of statistics and any correction of both figures and titles is cordially invited.
